EYEWASH STATION INSPECTIONS

To include confirming no obstructions are in the path to the station.

Location is clearly marked , lighted and the station is clean with eye wash nozzles covered.

Written documentation must be maintained, easiest is a tag on the equipment with the inspector's initials and date of inspection.

Plumed eye wash & shower stations must be inspected and operated weekly.

Non-plumed stations must be inspected monthly to assure tamper seal has not been broken.

Non-plumed stations fluid should be replaced per expiration date on container and replacement date noted by manufacturer.

Please check boxes below

Path to station clear	Location visible	Eye wash nozzles covered	Tamper seal intact	Expiration date checked	Date of inspection	Initials
