⁽¹⁾ New York State water testing parameters for lead require all water outlets to be tested after water has been stagnant in the water pipes and faucets for a minimum of eight hours. Flushing water through the water outlet is not permitted per the test.

⁽²⁾ A failed test results in immediate remediation efforts by the District. The water supply is turned off and the most common repair is to replace the fixture and retest the water from the location.

⁽³⁾ The District utilized apprved NYS remediation included replacement of fixtures, additional testing, signage indicating that the outlet is not to be used for drinking water and in certain situations, removal from service.
