Seasonal Influenza-Associated Hospitalizations Report
MMWR Week 1
01/01/2023 – 01/07/2023

Weekly Influenza-Associated Hospitalizations Activity Summary:
Butler County (MMWR Week 1, ending on 01/07/2023)

Butler County saw 8 confirmed influenza-associated hospitalizations for the MMWR week ending 01/07/2023. This is a **66.7% decrease** from the previous week. The 3-year average for this time of year is 12.3 influenza-associated hospitalizations. Receiving the influenza vaccine is the best way to reduce the chance of illness and complications, including those resulting in hospitalization and death.

Table 1.* Confirmed Influenza-Associated Hospitalizations Butler County Residents, 2022-2023 Influenza Season		
MMWR Week	Week Ending	Weekly Total
32	08/13/2022	1
33	08/20/2022	0
34	08/27/2022	0

Sources of Influenza Surveillance Data

Influenza-associated Hospitalizations (ODRS): Influenza-associated hospitalizations are reported to local health departments for entry into the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in 2009.
