

TIME TO PLANK BECAUSE:

Y Improves Core Strength

Holding a plank position taps into your core muscles and helps you build a strong abdomen. This will cause your ab muscles to tighten, which can help you develop a “six pack” and improve strength and endurance in your core.

Y Reduces Back Pain

Planks can strengthen your back muscles and improve your posture, which can reduce or eliminate back pain. Any exercise that strengthens your core will reduce lower back pain, so planks are a must if you have trouble in that area.

Y Makes You Happy

Exercising releases endorphins, which can improve your mood. Plus, doing planks stretches and relaxes muscles that tense up over

long periods of sitting down. If you're like me, you spend a lot of time at your desk, so it's important to undo the damage done by long periods of sitting.

Y Increases Flexibility

Planks stretch and utilize muscles that don't get a lot of attention in everyday life, increasing your flexibility. Your shoulders, collarbone, hamstrings, and the arches of your feet can all benefit from this.

Y Improves Balance

To perform a plank, you have to stay in position without sacrificing technique. This can be difficult on its own, but to challenge your balance even more, try doing side planks or leg raises. A regular schedule of various types of planks will help to improve your general sense of balance and your posture.

BASIC PLANK TIPS

1. Start in a pushup position and then slowly lower your forearms to the ground.
2. Ensure that your elbows are lined up under your shoulders.
3. Keep your abs & gluts tight and lifted.
4. Do NOT let your hips sag. Do NOT arch your back.
5. Keep a neutral neck and spine.
6. Your body should form a straight line from head to toe.

Beginners, try the modified plank. Need something more challenging? Try the side plank or knee tuck plank. See more plank ideas on the next page.
