

The City of Crooks has coordinated for a slurry seal to be performed on the in the areas shown on this map.

A slurry seal is a preventative maintenance treatment used to extend the life of a street and helps address minor defects. A slurry seal is a  $\frac{1}{2}$ " layer applied on top of the existing asphalt surface by a paver and is a mixture of asphalt oil, small rock, and other additives.

**Expect delays during slurry seal application. Traffic will be maintained on West Ave by pilot car and to either 7th St or 4th St to the west and 4th St or Main St to the east. It is expected that driveways and additional accesses along West Ave will not be accessible for a portion of the working day while the application takes place, please plan accordingly.**

The Contractor tentatively plans to perform this work the last week of July. It is expected that the work will be performed between 1-2 working days. Further notification will follow when exact dates are known. Traffic Control will be set up and additional information will be provided prior to commencing with the work.

If you have any questions or special needs before or during this operation, please contact the City Finance Officer, Tobias Scantz, at (605) 543-5238.
