

**DuPage County Environmental, Safety, Health & Property Loss Control Program**  
Battery / Chemical Leak Containment

---

**Purpose:** To provide requirements to protect personnel, property and the environment from leaking batteries in telecommunications and data server rooms. This prevents property and / or environmental damage from leaked acid and allows for proper collection and disposal of the electrolyte. Also provides for safe containment of drips and spills from chemical liquid dispensing stations.

**Policy:** A spill collection grate having at least 2 inch high sides must be placed below Lead Acid and Gel Cell batteries to contain any acid leaks and at all chemical liquid dispensing stations.
