Description: Install the new system exactly as depicted in the JVA Inc design dated August 10th, 2022, stamped and signed on August 17th, 2022 by Simon A Farrell, PE. This system is designed to accommodate the maximum daily flows for a 7 bedroom residence.

The OWTS consists of one sewer line from the residence. The primary treatment for the system consists of one Valley Precast 1,500 gallon, single compartment tanks in series with an effluent filter and alarm placed at the outlet tee of the second tank. The primary treatment tank is followed by a 2,000 gallon Valley Precast three-compartment recirculating/dose tank which will send wastewater to an Advantex AX-20 pod for nitrification using an Orenco PF500512 pump. Nitrified effluent flows to the splitter valve (mode 3B) for recirculation to the first 1,500 gallon tank for denitrification then is dosed using an Orenco PF500512 pump to an automatic distribution valve (ADV), set level at the high point of the system and made accessible at grade. The ADV will alternate dosed effluent to 3,840 square feet of soil treatment area between five beds, each consisting of 4 rows of 16 Infiltration chambers for a total of 320 chambers. Maintain all elevations and setbacks. Distribution lateral details, along with orifice size, spacing and orientation are on the design drawing.

NOTE: The contractor must verify that all electrical components and inspections are covered under the electrical permit associated with the Orenco Vericom control panel and pump connections. The alarm must be connected to a separate circuit. Additional pump details are on the design drawing. Advantex systems must conform to the CDPHE technology approval letter dated May 1, 2018.

A licensed installer has not been identified. No person shall install, renovate, or repair an OWTS in Eagle County (EC) without a valid EC Systems Contractor License. Any person that conducts a business as a systems contractor without having obtained a valid license section commits a Class 1 petty offense as defined in section 18-1.3-503, C.R.S. Please notify the department when an installer is identified, prior to installation of the OWTS.

Contact Eagle County Environmental Health and the design engineer well in advance of requesting inspections prior to backfilling any component of the OWTS. The design engineer is responsible for conducting all inspections necessary to certify the installation and assure the functionality of the system. System certification, along with photos and a record drawing is required to be submitted to and approved by Eagle County Environmental Health prior to the use of the system or occupancy of the dwelling.

OWTS-025128-2022	OWTS Permit	Major Repair	10700 Hwy 131 Wolcott Area, CO	Wolcott area	\$0.00	08/24/2022	08/24/2022
-------------------------	-------------	--------------	-----------------------------------	--------------	--------	------------	------------

Description: This system is designed to completely replace the system originally permitted under #1107-91IS. Install the new system exactly as depicted in the LKP Inc design dated, stamped and signed on December 16th, 2021 by Luiza Petrovska, PE. Abandonment of the existing tank must be completed in conformance with ECPHA OWTS Regulation 43.9.C.

The OWTS consists of two sewer lines, a new sewer line exiting the main house and an additional exiting the barn/shop. A Valley Precast 1,000 gallon, two-compartment concrete septic tank will be used in series with a 1,000 gallon single compartment concrete septic tank equipped with a Auto Siphon Model OSI318 by Valley Precast and effluent filters in the outlet tees. The siphon will be set to dose 76 gallons per minute. An additional Valley Precast 1,000 gallon, two-compartment concrete septic tank will be used for the barn/shop and will be tied in to the tank containing the siphon. The STA consists of 4 rows of 13 Infiltrator Quick4 Plus Standard chambers for a total of 52 over a 3 foot unlined sand filter. Gradation analysis must confirm sand as a secondary media.

Contact Eagle County Environmental Health and the design engineer well in advance of requesting inspections prior to backfilling any component of the OWTS. The design engineer is responsible for conducting all inspections necessary to certify the installation and assure the functionality of the system. System certification, along with photos and a record drawing is required to be submitted to and approved by Eagle County Environmental Health prior to the use of the system or occupancy of the dwelling.
