

- 1           142. "Water-related use" means a use or portion of a use, which is not  
2           intrinsically dependent on a waterfront location but whose economic  
3           viability is dependent upon a waterfront location because:
- 4           a. The use has a functional requirement for a waterfront location such  
5           as the arrival or shipment of materials by water or the need for  
6           large quantities of water; or
- 7           b. The use provides a necessary service supportive of the  
8           water-dependent uses and the proximity of the use to its customers  
9           makes its services less expensive and/or more convenient.
- 10          143. "Weir" means a structure generally built perpendicular to the shoreline for  
11          the purpose of diverting water or trapping sediment or other moving  
12          objects transported by water.
- 13          144. "Wetlands" are areas that are inundated or saturated by surface or  
14          groundwater at a frequency and duration sufficient to support and that  
15          under normal circumstances do support a prevalence of vegetation  
16          typically adapted for life in saturated soil conditions. Wetlands generally  
17          include swamps, marshes, bogs, and similar areas. Wetlands do not  
18          include those artificial wetlands intentionally created from non-wetland  
19          sites, including, but not limited to, irrigation and drainage ditches, grass-  
20          lined swales, canals, detention facilities, wastewater treatment facilities,  
21          farm ponds, and landscape amenities, or those wetlands created after July  
22          1, 1990, that were unintentionally created as a result of the construction of  
23          a road, street, or highway. Wetlands may include those artificial wetlands  
24          intentionally created from non-wetland areas to mitigate the conversion of  
25          wetlands.
