

## Magic Marker Leaf Printing

### What you'll need:

- Markers
- White Paper
- Damp cloth or paper towel
- Leaves

### Instructions:

- Apply marker to the back side of one leaf, where the veins are more prominent. Small leaves are a bit more manageable.
- Use one color or use more. Experiment with colors.
- Take a slightly damp, clean paper towel and wipe it across your white paper.
- Turn your colored leaf over and press it down onto damp paper. When you lift it up you should see a pretty little leaf print.
- You can continue coloring a leaf and printing away. The paper will dry quickly. Use paper towel to wipe across unprinted areas if you need to add more moisture. Touching the leaves that have already been printed will smear the watercolor print.
