

THINGS TO DO AT-HOME

Suggested by: Ms. Erin

Jefferson Elementary

Ice Experiment

6 Water Bottles

Ice

Small Plastic Container

- Put the water bottles in the freezer for about an hour. You will know it is the right temperature when you hit the bottle on the counter and ice forms in the bottle.
(Do not let the bottle freeze completely!)
- Place a couple ice cubes in the bottom of the plastic container.
- Carefully pour the water slowly onto the ice. It should start forming an ice tower right away. (If not, the water is too warm)

You can use more of the bottles of water to make the tower bigger!
