RESOLUTION - No. 82. Whereas, the bridge across the Ohio River at Ashland, Ky. is to become free of toll in the near future; and whereas the toll for crossing the Bridge between Maysville and Aberdeen is Forty (40¢) Cents; and whereas the business interests of the City of Maysville will be prejudiced when the Bridge at Ashland is declared free of toll and if a charge of Forty(40¢) Cents is maintained as a toll charge on the Bridge at Maysville-Aberdeen Bridge the additional traffico would probably make up any difference in income that might result in the redutcion of toll; Now, therefore; be it resolved by the Maryor and City Commissioners of the City of Maysville, Ky. that in their opinion the bridge toll at Maysville is ex-cessively high at the present time, and that in their opionion a charge of Twenty-five (25¢) would be a fair charge ; & that such a reduction in the toll from Forty Cents to Twenty-five Cents would probably cause considerable more traffic to cross the said bridge between Maysville && Aberdeen, &would therefore be favorable to the business interests of the City of Maysville.

R. B. ADAIR
Clerk.

To the Honorable Board of Council
of Maysville, Kentucky.

Gentlemen:

At the last meeting of this board, to-wit, on May 17th, 1923, you passed an ordinance entitled: "An Ordinance Providing that the clocks of the City of Maysville, Kentucky be set forward for and during certain months of the year"

In several cities where there has been a demand for an extra hour of daylight during the summer months, they have either moved the clock ahead an hour or started work an hour earlier without setting the clock. Daylight saving is a matter of convenience and expedience in which the widest freedom of action should be allowed. To seek to prescribe hard and fast regulations by law for the uniform control of a locality seems to be an abuse of governmental power. To a great degree the material existence of this community depends upon the good will of those living outside of Maysville but who do their trading here. In my judgment it would be unwise to work a hardship upon the communities who send to this city more than forty trucks each work-day.

Do we not owe some consideration to the communities who patronize us and thus materially assist in keeping us on the map?

Any factory or corporation that wishes an extra hour of daylight during the summer months can either move the clock ahead an hour or it can start to work an hour earlier, without setting the clock. This will not bring about any confusion as to time in the community; will not inconvenience our country friends who trade in Maysville and will not interfere with standard time which prevails in this section.

For the reasons stated above, I hereby veto the action of council in passing this ordinance.

(Signed) J. H. SAMUEL
Mayor City of Maysville, Ky.
Signed this 18th day of May,1923.

(Mayor's Seal of Maysville, Ky.)

I acknowledge that this notice of veto was served on me this May 18th, 1923.

(Signed) R. B. ADAIR
City Clerk City of Maysville, Ky

The concrete shall conform with the requirements for Class "A" Concrete in all respects, and shall be placed in the forms to the depth specified in layers of four (4) or five (5) inches, and tamped and spaded until mortar entirely covers its surface. Where indicated or directed, drainage openings shall be made through the curb at the elevation and of the size required.

The two (2) inch mortar top shall then be placed immediately and in no case in more than thirty (30) minutes after the last of the concrete has been placed, and the top surface shall be floated smooth. Care shall be observed to see that the dovetailed end of the bar and the frogs are entirely surrounded with the mortar.

The top of the curb shall be floated smooth and the outer edge shall be rounded to a radius of one (1) inch while the concrete is still soft.

Forming Joints. The curb and curb and gutter shall be constructed in uniform lengths or sections of ten (10) feet, except where shorter sections are necessary for closures, but no section shall be less than four (4) feet. These sections shall be separated by sheet templets set perpendicular to the face and top of the curb. The templets shall be set carefully during the placing of the concrete and allowed to remain in place until the concrete has set sufficiently to hold shape, but shall be removed while the forms are still in place.

Finishing. The forms shall be removed within twenty four (24) hours after the concrete has been placed. Plastering shall not be permitted on the faces of the curb and all rejected curb shall be removed and replaced without additional compensation. The top and face of the curb from the top to eight (8) inches below, shall be finished while the concrete is still green by wetting with a soft brick or wooden block and rubbing the surface until it is smooth. Plenty of water shall be used, either by dipping the block or brick in water, or by throwing water on the curb with a brush. After the concrete has been rubbed smooth it shall be rubbed again until a uniform color is produced, using in place of water a thin grout composed of one (1) part of Portland cement and one (1) part of approved sand. When completed the curb shall be protected from the elements in a satisfactory manner for a period of three days or longer if directed.

Tangent Joints. Where circular concrete curb unites with the tangent, or straight curb, there shall be embedded in the concrete two (2) reinforcing bars, one-half (1/2) inch in diameter and twenty four (24) inches in length. These bars shall be placed three (3) inches and nine (9) inches respectively below the top of the curb and in the center of its width, and shall extent twelve (12) inches into the curb on both sides of the joint.

Refilling. After the concrete has set sufficiently the spaces in front and back of the curb shall be filled to the required elevation with suitable material which shall be tamped in layers of not more than six inches until firm and solid.

Basis of Payment. This work will be paid for at the contract unit price per lineal foot for "Cement Curbing", complete in place, which price will include all materials, forms, equipment, tools, labor and work incidental thereto, also all drainage openings, excavation for curb, refilling and disposal of surplus material.

CONCRETE PAVING

The filler to be used where transverse joints are indicated on plans shall consist of approved prepared tar or asphalt filler having a thickness of not less than three-eighths (3/8) of an inch as specified, and a depth of not less than one (1) inch more than the depth of the pavement.

Forms. The side forms shall be of steel of either the flat or rounded top type. They shall be straight, with a base of at least four (4) inches, and shall be of a width equal to the thickness of pavement at the edge.

When special permission is given, side forms of wood may be used. They shall be of two (2) inch surfaced plank, straight and of a width to equal the thickness of the pavement at the edge.

The forms shall be joined neatly and tightly and staked securely to line and grade at least two hundred (200) feet in advance of the point of placing concrete. They shall be thoroughly cleaned and oiled before concrete is placed against them.

Mixing Concrete. Concrete shall be mixed thoroughly in a batch mixer of approved type for a period of not less than one (1) minute after all the materials are in the drum, and during this period the drum shall make not less than fourteen (14) nor more than eighteen (18) revolutions per minute. The entire contents shall be removed from the drum before materials are placed therein for the succeeding batch. No hand mixing will be permitted.

Reinforcement. Reinforcement shall be placed as per plans and cross sections.

Placing Concrete. Concrete shall be placed only on a moist sub-grade. If the sub-grade is dry it shall be sprinkled with as much water as will be absorbed readily. Where the pavement is to be laid adjacent to railway tracks or around structures, no concrete shall be placed until the tracks and structures have been set to the required grade and alignment in advance.

The concrete shall be deposited on the sub-grade rapidly in successive batches, by means of a discharging device which does not

cause spearation of the mortar and the coarse aggregate and shall be distributed to the required depth and for the entire width of the pavement by shoveling or other aproved methods. This operation shall be continuous between transverse joints without the use of intermediate forms or bulk heads. In case of an unavoidable interruption, a transverse joint shall be placed as herein specified at the point of stopping work, provided that the section on which work has been suspended shall not be less than ten (10) feet in length. Sections less than ten (10) feet in length shall be removed.

Placing Transverse Joints. Transverse joints, where called for, shall consist of pre-molded or prepared filler approved by the Engineer. It shall be not less than 3/8 inch in thickness. All joints shall be placed at right angles to the center line of the road and perpendicular to the surface of the pavement. After the pavement is completed the filler shall be cut off above the surface of the road to the height designated.

Finishing Concrete. The surface of the concrete shall be struck off by means of a steel or steel-shod wood templet of approved design. The templet shall have sufficient strength to retain its shape under all working conditions. This templet shall be moved with a longitudinal and crosswise motion moving always in the direction in which the work is progressing. When the templat reaches within three (3) feet of a transverse joint it shall be lifted to the joint and the pavement struck by moving the templet away from the joint, and all excess concrete shall then be removed.

The concrete adjacent to a transverse joint shall be finished with a split woodfloat which will insure finishing both sides to the same grade, after which the concrete adjacent to the side forms shall be rounded to a radius of approximately one-half (1/2) of an inch. The finishing of the joints shall be done from a bridge which shall not rest on the concrete at any point.

Protection of Concrete. After the concrete is placed, the surface of the pavement shall be sprinkled with water as soon as the concrete has hardened sufficiently to prevent pitting. The entire surface of the pavement shall be covered with earth or other approved material to a depth of not less than two (2) inches. This material shall be kept moist by sprinkling with water if directed by the Engineer, and shall remain on the concrete for a period of not less than ten (10) days under the most favorable conditions, or for a longer period if directed by the Engineer, during which time traffic shall be excluded from the concrete.

When approved by the Engineer, other methods of curing and protecting the concrete may be used.

After the foregoing period has elapsed, the covering on the concrete shall be removed, the surface of the pavement swept clean and the concrete allowed to cure for a period of three (3) days, after which the roadway may be opened to traffic.

KENTUCKY ROCK ASPHALT PAVING

Materials. Crushed Stone: The stone for this work shall consist of angular fragments of crushed rock of uniform quality throughout, free from thin or elongated pieces, soft or disintegrated stone, dirt or other objectionable matter, and shall meet the following requirements:

French co-efficient of wear, not less than 6
Toughness, not less than 9
Hardness, not less than 14

The metal for the top course shall be that portion of the crusher product which, when tested by means of laboratory screens

will meet the following requirements:

Passing 3 inch screen	100%
Retained on 3/4 inch screen	85%

Screenings: The screenings for the top course shall be that portion of the crusher product, including the dust of fracture which, when tested by the use of laboratory screens, will meet the following requirements:

Passing 3/4 inch screen	100%
Passing 1/8 inch sieve, not more than . . .	20%

Method of Construction. The top of the old macadam base course shall be scarified and re-shaped as shown on plans.

Stone Course. After the old base course has been prepared to the satisfaction of the Engineer, the material for the top course shall be spread to a sufficient depth so that after compacting it will be as shown on plans and not less than five (5) inches deep. The top course metal shall be dumped on dumping boards and spread by hand from them unless spreading wagons or trucks of an approved type are used. If the bottom course is disturbed by hauling, it shall be re-shaped and re-rolled before the top course is spread. After spreading the metal the required thickness, it shall be rolled until thoroughly compacted and keyed together. Rolling shall begin at one edge of the roadway with the wheel overlapping the shoulder about six (6) inches, and shall be continued and all depressions and irregularities removed as specified for the base or foundation course. To secure the proper thickness of the layer, the Contractor shall, if required by the Engineer, set stakes or wooden blocks about six (6) inches square, a height equal to the required thickness of the top course and spread the metal flush with the top of the stakes or blocks.

After the metal has been rolled, screenings of the size specified herein shall be spread with shovels from piles alongside the road, and in no case shall screenings be dumped on the surface of the metal. Screenings shall be spread uniformly in thin layers and each layer rolled dry; this process being continued until all voids in this course are filled to within one-half (1/2) inch of the surface of the finished course. The surface shall then be thoroughly wet and rolled at the same time. The sprinkling and rolling shall be continued until the stone is well bonded and set. The surface stone shall be free of dust. When compacted the surface shall present a granular appearance, with the voids not filled nearer to the surface than one-half (1/2) inch (this to provide anchorage for the Kentucky Rock Asphalt wearing surface).

Kentucky Rock Asphalt. Kentucky Rock Asphalt shall be a natural bituminous sandstone, mined in the State of Kentucky. The rock asphalt shall be used as mined, with no preparation other than crushing and grinding. No bitumen, sand or other materials shall be mechanically mixed with the rock asphalt. The rock asphalt shall be so crushed that when tested by means of laboratory sieves it shall meet the following requirements:

Passing 1" sieve, not less than	.90%
Passing ¾" " " " "	.80%
Passing ½" " " " "	.70%

The sand contained in the rock asphalt shall contain not less that 95% silica (Si02). The bitumen (loss on ignition), when determined by the official ignition method upon a dried sample, shall be not less than 7%, nor more than 8%. To account for permissible variations in sampling or analysis a permissible variation of .25% will be allowed on analytical results, and all results below 7% but within the permissible variation of .25% shall be reported at 7%.

Laying of Surface. No Kentucky Rock Asphalt shall be laid down when the temperature is below 50 deg. F.

Before any surface is laid, the foundation must have been

accepted by the Engineer. Acceptance will be given only when the foundation has been constructed accordingly to the plans and specifications. No surface shall be laid on a damp or wet foundation. All foreign matter shall be swept from the foundation prior to laying the wearing surface. In construction on macadam foundation care shall be taken to re-shape and re-roll the foundation if disturbed by hauling.

The rock asphalt shall be dumped either on dumping boards or directly on the foundation. Each pile shall be at such a distance from the surface already spread as to permit the entire pile to be handled and spread into place with shovels. No rock asphalt shall be raked into place directly from the piles. After spreading with shovels, the surface shall be raked to proper thickness and grade. The rock asphalt must be raked thoroughly clear through to the foundation in order to secure a wearing surface of uniform density. Raking must be continued until the entire surface is even and tue and free from lumps or honey-combed areas. Honey-combed areas may be closed by sifting a small quantity of rock asphalt on to the spot through a one-quarter inch sieve.

After raking, the surface shall be left exposed to the sun until it presents an oily appearance. In the event the surface is laid during a rain or if the material in the piles is noticeably moist, the rock asphalt should be raked into place, but should not be rolled until the moisture has been evaporated by the heat of the sun.

The surface shall then be rolled with a roller weighing not less than eight tons. Rolling must be continued until no further compression is obtainable and the surface is free from waves, depressions and honeycombed areas. Any honey-combed spots which develop during rolling may be filled by sifting a small quantity of rock asphalt through a quarter inch sieve on to the spot. It is advisable to roll the surface thoroughly each day for three consecutive days. Around man-holes and other fixtures, where the roller can not reach, compression may be obtained by tamping. The edges of gutters, curbs and fixtures shall be apainted with asphalt cement before the wearing surface is laid.

The paint coat should consist of approximately sixty per cent. of asphalt cement, having a penetration of forty to fifty five and forty per cent. of naptha or gasoline. A short period of time should be allowed for the evaporation of the volatile oils before the Kentucky Rock Asphalt is laid.

be made unless the nature and extent thereof has first been certified by the Engineer in writing and sent to the contractor, and no work involving increased cost shall be performed pursuant to such alterations and modifications until a supplemental contract for same shall be entered into in writing.

24. - DAMAGES AND CLAIMS. If the contractor claims compensations for any damage sustained, he shall withon one week after the sustaining of such damage make a written statement to the Engineer of the nature of the damage sustained and shall on or before the fifteenth day of the month succeeding that on which any such damage shall have been sustained, file with the Engineer itemized statement of the details and amounts of such damage, and unless such statement shall be made as so required, his claim for compensation shall be forfeited and invalid, and he shall not be entitled to payment on account of any such damage.

The contractor shall and will do any work and furnish any materials not herein provided for which in the opinion of the Engineer may be found necessary or advisable for the proper completion of the work or the purposes thereof. All extra work and materials shall be ordered in writing by the Engineer, and in no case shall any such work or materials in exceds of the amount shown by said plans and specifications be paid for unless so ordered, and then only when such a claim therefor is presented to the Engineer for allowance by the fifteenth day of the month succeeding that in which the same has been done and furnished, otherwise the claims for such work or materials shall be absolutely waived by the contractor and the Council shall not be required to allow payment for same or any part thereof.

The contractor further agrees that he will accept in full compensation for such extra work and materials the unit price bid in the case of items covered by unit price in the proposal and no more.

25. - TIME OF BEGINNING AND COMPLETION AND RATE OF PROGRESS.

Whenever the contractor fails to complete the work herein specified within the time named, he shall be liable for the cost of engineering at Fifteen ($15.00) Dollars per day for each and every calendat day except Sundays and legal holidays, time when such work shall be suspended by order of the Engineer shall not be counted as such calendar days after said completion date, and the amount of such cost shall be deducted from any monies which may be due from the City.

In addition thereto, there will also be deducted the sum of Five ($5.00) Dollars per diem for the same period, which amount it is hereby agreed the City will suffer by way of damages from failure to complete the work at the time specified (time of completion of contract being an essential element, and said sum being not in the nature of a penalty but a part of the consideration of this contract), unless the Council shall grant an extension of time for the completion of said work; but it is to be understood that such extension of time shall not apply as to the cost of engineering beyond the advertised date for completion.

26. - INCLEMENT WEATHER. Should the weather be wet or cold so that any part of the work cannot be done in the proper manner with due regard to durability, or should such be the case from any other cause, then the Council may order such part of the work to be suspended until a more suitable season, in which case the contractor will cover and otherwise sufficiently protect the several parts of the work so that it will not be injured by the weather.

27. - EXTENSION OF TIME. If the contractor is obstructed or delayed in the prosecution of the work by an injunction, in the neglect, delay, or fault of any other contractor having a contract with the City for adjoining or contiguous work, or by any damage that may happen thereto by the unusual action of the elements, or by the abandonment thereto of the work by employees in a general strike, or by any delay on the part of the City in doing the work or furnishing the materials to be done and furnished by it, or

for any other reason which the Engineer shall deem sufficient, the contractor shall have no claim for damages for any such cause or delay, but should in such case be entitled to such extension of time specified herein for the completion of the work as the Engineer shall allow in writing, if the contractor has made claim for such extension within one week from the time when such alleged cause for delay shall occur.

28. - FINAL ACCEPTANCE. The contractor shall on the completion of the work so notify the Engineer, and the Engineer together with the Street Paving Committee shall, by personal inspection, satisfy themselves as to the actual completion of the work, and shall then issue to the contractor a properly dated notice of acceptance.

29. - CANCELLATION OF CONTRACT. If the work to be done under this contract be abandoned, or if this contract, or any part thereof, be sublet without the consent of the City first being obtained in writing, or if this contract or any claim thereunder be assigned by the contractor otherwise than as herein specified, or if at any time the Engineer is of the opinion and certified in writing that the conditions herein specified as to the rate of progress are not fulfilled, or that the work or any part thereof is unnecessarily or unreasonably delayed, the Council may then notify the contractor to discontinue all work under this contract; and it is hereby agreed that the contractor shall immediately respect such notice and stop work and cease to have any right to the possession of the ground.

The Council shall thereupon have the power to work at and to complete the work herein described, furnishing the necessary materials therefor, or to contract and complete the same as herein provided for in the same manner provided by the law for the letting of contracts by the City, and to use such materials and tools, machinery and appliances for the completion of the same, and to charge the expense of said labor, materials, tools, machinery and appliances, or of the new contract, to the contractor, and the expenses so charged shall be deducted and paid out of said money as may be due or thereafter may become due the contractor, and in case such expense is less than the sum which would have been payable under this contract if the same had been completed by the contractor, he shall be entitled to receive the difference; and in case such expense is greater, the contractor (and in case of his default, his surety) shall pay the amount of such excess, on notice from the Council, to the Treasurer of the City of Maysville, Mason County, Kentucky.

30. - PRICES. The City shall pay and the contractor shall receive as full compensation for everything furnished and done by the contractor under the contract, and also for all loss or damage arising out of the nature of the work aforesaid, or that caused by floods or from any action of the elements, or from any unforeseen obstruction, or difficulty encountered in the prosecution of the work, and for all risks of every description connected with the work, and for all expenses incurred by or in consequence of the suspension or discontinuance of the work herein specified, and for well and faithfully completing the work and the whole thereof, as herein provided, and for making repairs to and maintaining the work in good condition until the final payment is made, the prices stipulated in the proposal herein attached.

31. - CURRENT ESTIMATES. Current monthly estimates shall, as provided in the ordinances authorizing this work, be allowed during the time of the execution of the contract, and final payment shall be made when the work is completed as herein provided.

32. - FINAL SETTLEMENT. The Engineer shall as soon as practicable after the final acceptance of the work done under this contract, make a final estimate of the amount of work done under this contract and the value thereof. Said final estimate will be signed by the Engineer and Street Paving Committee and the City (after such final estimate has been so made and approved by the City Council), shall pay the entire sum so found to be due

hereunder, after deducting therefrom all amounts to be kept and amounts to be retained under the provisions of this contract.

33. - MAINTENANCE. The wearing surface of all improvements made under this contract shall be maintained and kept in good condition by the contractor for a period of two years from the date of completion, except on streets where such wearing surface is macadam the maintenance period shall be one year; and all settlements, defects or damages in and to any portion of the payment or any derangement in the alignment or grades of the curbing shall be repaired and made good by the contractor at his own expense before the expiration of the two year period, and within thirty (30) days after notice has been given by the Engineer of the city, and all rubbish which may accumulate during and by reason of the work herein provided for shall be removed by the contractor and the street left clean and ingood condition, and the bond for the performance of this contract shall be held to cover the above guarantee of maintenance and repair.

34. - END OF MAINTENANCE. At the expiration of the maintenance period, the sum so retained from the contract price, less any amounts which may have been expended on repairs as above, shall be paid to the contractor, provided said improvement is in good condition or shall be put in good condition, and he shall furnish the City with the certificate of the Engineer that the same is in good condition.

35. - WAIVER OF RIGHTS. No certificate given or payment made under this contract except the final certificate or final payment, shall be evidence of the performance of the contract either wholly or in part, and no payment shall be construed to be in acceptance of defective work or improper materials. No act of the Council or of the Engineer or of any representative of either of them in supervising or directing the work, nor any extension of time for the completion of the work, shall be regarded or taken as an acceptance of said work or any part thereof, or of materials used therein, or therefor, either wholly or in part, but such acceptance shall be evidenced only by the final certificate of the Engineer.

Before any final certificate shall be allowed, the contractor will be required, and he hereby agrees to sign and attest on said certificate a statement that he accepts the same in full payment and settlement of all claims on account of work done and materials furnished under thie contract; and, furthermore, that all claims for the materials provided or labor performed have been paid and satisfied in full. No waiver of any breach of this contract by Council or any one acting for or on its behalf shall be held as a waiver of any other or subsequent breach thereof. Any remedy provided herein shall be taken and construed as cumulative, that is, in addition to each and every other remedy herein provided or arising by operation of law.

36. - RELEASE OF LIABILITY. No person nor corporation other than the signers of this contract as contractor has any interest hereunder, and no claims shall be made or be valid, and neither the Council nor any official or agent of the City shall be liable for or be held to pay any money except as provided for herein. The acceptance by the contractor of the last payment shall operate as and shall be a release to the City and every officer and agent thereof from all claims and liabilities to the contractor for anything done or furnished for or relating tobthe work,

37. - WORK TO BE COMPLETE. If any workmanship or material is required which is obviously necessary to carry out the full intent and meaning of the plans, details, diagrams and these specifications, although the same may not be either directly or indirectly or specifically noted upon the drawings or in the specifications, the contractor is hereby bound to consider and provide for the same in his proposal for the work as fully as if they were specifically noted and shall execute the same without charge or claim therefor.

The contractor shall not be allowed to take advantage of any error or omission in the plans, profiles or in these specifications

as full instructions will always be given should any such error or omission be discovered. To avoid disputed and litigation, it must be distinctly understood by the contractor that the Engineer shall construe the specifications and approve plans and explain any obscurity therein, and shall have the right to correct any errors or omissions in either as well as to decide as to their purpose and intent. His decisions upon any doubtful or disputed condition shall be final and conclusive and binding upon the City and upon the contractor.

GRADING.

1. - REMOVING OLD MATERIAL. All old material such as cross stone walks, curb stone, cobblestone, paving stone or paving brick now upon the street, which it is necessary to remove, shall be taken up carefully by the contractor and unless ordered used in the improvement, or desired and removed by the owner of the property in front of which it is located, shall become the property of the City and the contractor shall pile same at such point on intersecting streets as the Engineer may direct. All old curbs sandstone or limestone, which is not git to be redressed shall be taken out and removed.

2. - REMOVING OBSTRUCTIONS. The contractor shall rmmove any all obstructions such as trees, old material rubbage, logs, filth or refuse of any kind that may be encountered in the execution of the work. Upon encountering pipes or any sub-grade structure belonging to the water department or service corporations operating under their franchise, permits or orders, that may interfere with the work, the contractor shall give notice in writing to the water department, corporation or party owning them in sufficient time in advance to enable them to adjust, remove or rebuild them.

3. - EXCAVATION SUB-GRADE. The whole street for the width of two (2) feet wider than between faces of curbs shall be excavated to a depth as shown on the cross section. Streets with curved gutters shall be excavated to six (6) inches outside gutter lines.

4. - SIDEWALKS AND APPROACHES. When required by the Engineer, the sidewalks and street approaches shall be excavated to such widths, slopes and grades as directed and no excavation outside of such authorized spoles of grades shall be paid for unless by reason of causes not under control of the contractor. When sidewalk area is not to be graded, then the contractor shall so dress the slopes from the curb as to leave the street in a trim and workmanlike condition, and when approaches are not being graded, the approach is to be dressed at the connection so as to allow easy and safe passage of vehicles.

5. - RESTORING SIDEWALKS. Any sidewalk or parking adjoining, injured or damaged in excavating, moving, seeling or readjusting curbing or catch basins, shall be restored to a good condition, and the sidewalks at crossings extended full width to the new curb line with the same kind of material at the contractor's expense.

6. - EMBANKMENT. Where the natural surface is below sub-grade, it must be filled with as good a material as the average of that found upon the street and spread in layers of not more than twelve (12) inches and rolled, except in case of deep fills on steep slopes. Such slopes must bedeely furrowed before forming the dumps and these embankments must be compensated for shrinkage before rolling, and notrolled until all shrinkage has disappeared.

Material in embankment will not be paid for, unless the cubic contents of the embankment exdeeds the cubic contents of the excavation, in which case the material in embankment only, measured in completed roadway, will be paid for.

7. - FILLING SIDEWALKS. The contractor must make all necessary filling of the sidewalks on the line of the improvement, the full width of same if directed by the Engineer, to the

proper line and grade, with the excess or part of the excess of material remaining after the completion of the sub-grade.

8. - HAUL. Material not necessary in filling the treet shall be hauled to and spread upon any street or alley within 500 feet calculated on the line of shortest haul, if so directed by the Engineer, and the price bid for grading shall be the full compensation for said excavation and handling of same. The Engineer may require, by notice in writing, that excess material he hauled a greater distance than 500 feet, and if so, then the contractor shall be paid overhaul.

9. - WASTED MATERIAL. Allexcess after filling sidewalks, embankments, streets or other places required by the Engineer, shall be disposed of by the contractor. No material shall be wasted upon any lot without the consent of the owner.

10. - FINE GRADING. Just previous to rolling,the whole sub-grade shall be scalped by hand to crown and grade as shown on the plans and sections.

11. -COMPACTING. When the grading has been completed, the entire surface of the sub-grade shall be rolled not less than three (3) times with a steam roller weighing not less than three hundred and fifty (350) poubds per lineal inch of roller; or, if in the opinion of the Engineer, the use of a steam roller is unnecessary, he may permit the use of a roller weighing not less than two hundred and fifty (250) pounds per lineal inch and all places inaccessible to a roller shall be tampled to an equal bearing. Soft or spongy places which develop in rolling shall be dug out, replaced with dry gravel and re-rolled until firmly compacted. The contractor shall be responsible for all damage to walk or property caused by the roller while in his service.

12. - HAULING ON SUB-GRADE. No haling shall be done on sub-grade while soft.

13. - PAYMENT. The price bid per cubic yard for excavation or embankment shall include the excavation of all material authorized from the foundation, sidewalks, approaches, sub-drain trenches, or in forming embankments, if in excess, and shall be full compensation for the revmoal of trees or obstructions, the removal of old paving material, the removal of all old curb on the street, the restoring of sidewalks, the hauling and disposition of excavated material within free haul, the furnishing and replacing of gravel in trenches of approaches and the final rolling and compacint of the sub-grade.

14. - READJUSTMENT OF COVERS ON OLD STREET STRUCTURES. All covers of ctach basins, man holes, valve boxes or other structures belonging to the City encountered within the limits of the work, slopes or approaches thereto, shall be built up and reset to new lines and grade in a secure manner, and such re-adjustment shall be considered as incidental and no extra compensation allowed.

15. - SUB-DRAIN. LAYING: After the sub-grade has been prepared, a 4-inch straight drain tile, free from imperfections, shall be placed to a true line in position as shown upon the section and completely covered with clean broken stone or gravel not larger than will pass through a screen having one inch (1") circular openings. At the drain outlet there will be laid two (2) lengths of socket pipe cemented at each joint, resting upon a tampled bed of gravel. Whenever the roadway, whether or concrete or other material, is made with a center gutter, the drain pipe shall be laid in the center of such roadway, as shown on section. Drain pipe shall only be used on such streets or places as the Engineer may direct; and the Engineer reserves the right to order it used or abandoned, as he may deem fit.

16. - SUB-DRAIN. PAYMENT. The price perlineal foot for all four inch (4") sub-drain shall include the furnishing and laying of the pipe, cementing outlet joints and the covering of the pipe as herein specified, or to any delth necessary to drain the street.

ONE COURSE CONCRETE STREET PAVING MATERIALS.

1. - CEMENR. The cemenr shall meet the requirements of the

standard specifications for Portland Cement adopted by the American Society for Testing Materials September 1st, 1926, with all subsequent amendments and additions thereto adopted by said society.

2. - FINE AGGREGATE. Fine aggregate shall consist of sand or screenings from clean, hard stone or gravel consisting of quartzite grain or other equally hard material graded from fine to corase with the coarse particles predominating and passing, when dry, a screen having one-quarter (¼") inch openings. It shall be clean, hard, free from dust, loam, vegetable, or other deleterious matter. Not more than twenty-five per centum (25%) shall pass a sieve having fifth (50) meshes per lineal inch, and not more than five per centum (5%) shall pass a sieve having one-hundred (100) meshes per lineal inch. Fine aggregate containing more than three per centum (3%) of clay or loam shall be washed before using.

Fine aggregate shall be of such quality that the mortar composed of one part Portland Cement and three parts fine aggregate, by weight, when made into briquets, shall show a tensile strength at least equal to the strength of 1.3 mortar of the same consistency made with the same cement and standard ottawa sand. In no case shall fine aggregate contain frost or lumps of frozen material.

3. - COARSE AGGREGATE. Coarse aggregate shall consist of clean, hard, durable, crushed rock or gravel graded in size, free from dust, loam, vegetable or other deleterious matter, and shall contain no soft, flat, or elongated particles.

The size of the coarse aggregate shall be such as to pass a two-and-a-half (2½) inch round opening and be retained on a screen having one-quarter (¼") inch openings with no intermediate sizes removed. In no case shall coarse aggregate contain frost or any lumps of frozen material.

4. - NATURAL MIXED AGGREGATE. Natural mixed aggregate shall not be used as it comes from deposits but shall be screened and used as specified.

5. - WATER. Water shall be clean, free from oil, acid, alkali or vegetable matter.

6. - REINFORCEMENT. All reinforcements shall be a metal frabric satisfactory to the Engineer and shall be free from excessive rust, scale, paint or coatings of any character which will tend to destroy the bond. All reinforcements shall develop an ultimate tensile strength of not less than 70,000 pounds per square inch and bend 180 degrees around one diameter and straighten without fracture.

7. - SIDE FORMS. Metal or wooden side forms shall be smooth, clean, free from warp, of sufficient strength to resist springing out of shape, and shall be equal in width to the thickness of the pavement at the edges. Wooden forms shall be of not less than two inches (2") stock and shall be capped with two inch (2") angle frons. These forms shall be firmly staked or otherwise held to the established lines and grades. All mortar and dirt shall be removed from forms that have been previously used.

8. - MEASURING MATERIALS. The method of measuring the materials for the concrete, including water, shall be one which will insure separate and uniform proportions of each of the materials at all times. a sack of Portland Cement (94 pounds) shall be considered as one cubic foot (1 cu. ft.).

9. MIX. The concrete shall be mixed on the site of the work in the proportions shown on the plans or in the estimate, and described by the specifications.

10. - CONSISTENCY. The materials for the pavement shall be mixed with only sifficient water to produce a concrete which will settle very slowly when deposited in a pile, and which will hold its shape when struck with a templet. The consistency shall not be such as to cause a separation of the mortar from the coarse aggregate when handling. After the concrete has been lightly tamped, there shall be no free water in evidence. Individual particles of the coarse aggregate when isolated shall show a coating of mortar containing its

proportionate amount of sand.

11. - MACHINE MIXING. The concrete materials shall be measured in such a manner as to insure uniform proportioning of all the ingredients. The amount of water to be used for each batch shall be accurately measured by a suitable device attached to the mixed. In no case shall the mixer be loaded in excess of its rated capacity. The concrete shall be mixed thoroughly in the batch mixer of approved type for a period of not less than one (1) minute after all the materials are in the drum, and during this period the drum shall revolve at the speed for which it is designed but shall not make less than fourteen (14) nor more than twenty (20) revolutions per minute.

When required by the Engineer, there shall be attached to the mixer a device satisfactory to him, which will register and indicate automatically any given number of revolutions of the mixing drum after it has been fully charged. The inside of the drum shall be kept free from hardened concrete and the drum shall be completely emptied before re-charging.

12. - HAND MIXING. For hand mixing, the following method shall be used:

The concrete materials shall be mixed on water tight platforms of iron or wood of sufficient size to admit of proper manipulation of the ingredients. The fine aggregate shall first be spread evenly over the platform and then covered uniformly with the cement. These two materials shall be mixed dry until the mixture is homogeneous and of a uniform color. Water shall then be added to the mix and the mixing resumed and continued until the mortar of uniform consistency and texture is produced. The mortar shall then be spread in an even layer over the platform. The coarse aggregate which has been previously wet, shall then be distributed over the mortar and mixed thoroughly until the mortar is evenly distributed throughout the mass and every piece of the coarse aggregate is thoroughly coated with mortar. Water shall not be pitched upon the mixed in large quantities but shall be added gradually and in such manner as not to wash the cement from the aggregate.

13. - PLACING CONCRETE. The concrete shall be deposited on the sub-grade between the forms and shoveled into position in such quantity as to make a uniform layer about one (1) inch greater than the required finished thickness. After being deposited between side forms, it shall be thoroughly spaded or rammed so as to produce uniform density and eliminate all voids.

Concrete shall be deposited in successive batches and in a continuous operation between transverse joints. hen the completion of a section extending between transverse joints is unavoidably interrupted, an intermediate transverse joint shall be placed at the point of stopping as hereinafter specified. Any concrete in excess of that needed to complete the section shall not be used in the work.

14. - RETEMPERING. Retempering of mortar or concrete which has partially hardened, that is, remixing with or without additional materials or water, shall not be permitted.

15. - TEMPLETS, BRIDGES AND FLOATS. The contractor shall provide suitable cutting templets, tamping templet, two bridges, floats and straight edge as required elsewhere in these specifications. This equipment shall be maintained in good order on the improvement at all times when work is in progress.

16. - FINE GRADING AND WETTING SUB-GRADE. Immediately before placing of the concrete, and as the placing of the concrete progresses, the surface of the sub-grade shall be reshaped by the use of a templet to the corss-section indicated on the plan. The templet shall be placed and moved between the mixer or mixing platform and the concrete in place, in a vertical position at right angles to the center line of the pavement, and shall be at all times, when in use, supported on the top of the side forms. Any irregularities in the surface of the sub-grade, as indicated by the templet, shall be

corrected by hand grading, and in no case shall there be more than one-quarter (¼) of an inch of loose material below any part of the surface. The surface of the sub-grade shallbe in a wet but not muddy condition just before concrete is deposited thereon; but no pools of water shall be allowed to form on the sub-grade.

17. - TRENCH REINFORCEMENT. Trench reinforcement shall be provided where called for in estimate. It shall be used when indicated on plans or directed in writing by the Engineer. The bars ahll be one-half (½) inch square twisted or other deformed bars of equivalent area. These bars shall be at least four (4) feet longer than the trench space and shall be placed with their centers one (1) inch from the bottom of the concrete and shall be spaced as directed. Final estimate will be allowed only for such steel as is placed in the work according to the above instructions.

18. - FINISHING SURFACE OF CONCRETE. After being placed as above described, the concrete shall be struck off with a templet used as a cutting edge while moving with a combined longitudinal and crosswise motion, leaving the surface of the concrete about one-half (½) inch higher than the required finished surface. When used as a cutting edge, there shall be in front of the templet at all times and over its entire length a slight but uniform excess of concrete, which is pushed forward to where the new concrete is being deposited. After the concrete is thus struck off, it shall be consolidated and made uniformly dense by a succession of tamping motions with a heavy templet as the templet is slowly moved forward.

When each templet is within three (3) feet of a transverse joint, it shall be lifted to the joint, and the concrete leveled or compacted by moving the templet away from the joint. Any excess of concrete about the joint shall be removed. Any holes left by removing any material or devise used in constructing a joint shall immediately be filled with concrete of the same proportions as the rest of the pavement. All concrete shall be dense in character, but special care must be exercised to secure maximum density adjoining transverse joints.

After being brought to the established grade by the use of templets as described above, the concrete shall be floated with a wooden float not less than eight (8) feet long nor less than six (6) inches wide, operated from two bridges with its axis approximately parallel to the center line of the pavement. This float shall be moved with a see-saw motion across the pavement with sufficient pressure being placed on the same to eliminate any irregularities left in the concrete by the templet, and in a manner to thogouthly compact the concrete and produce a surface free from depressions or inequalities of any kind.

In lieu of the above, the following may be used at the option of the Engineer:

Immediately after the concrete has been struck off, it shall be rolled with an approved metal hand roller having a smooth, even surface, approximately six (6) feet in length, not less than eight (8) nor, more than (12) inches in diameter and weighing not more than seventh (70) pounds. This roller shall have a handle at least two (2) feet longer than the width of the pavement and all the rolling shall be done from one side of the pavement. The roller shall pass from one edge of the pavement to the other in one operation with a crosswise motion to advance the roller longitudinally not to excess two (2) feet in passing from one side of the road to the other and the rolling shall continue until free water ceases to come to the surface. All portions of the pavement shall receive at least three rollings at intervals of about fifteen (15) minutes.

The pavement shall be finished with a wooden float about six (6) inches wide and twenty (2) inches long; or, in lieu of this latter, a belt may be drawn back and forth across the pavement in such a way as to remove any collection of water on the surface and to leave the surface smooth, regular, and in conformity with the cross-section required.

The concrete adjacent to the expansion joint shall be finished with a wooden float, which is divided through the center and which will permit the finishing on both sides of the filler at the same time, in such a way that it will produce the two edges at the same elevation. Both edges of the joints shall then be rounded off with an edger, having a radius of one-fourth (¼") inch .

A finishing machine of approved type which will produce the above results may be used. The edges of the pavement shall be rounded with an edger to a radius of one-quarter (¼) inch.

The finished surface of the concrete shall conform so nearly to that indicated on the plans that it will nowhere vary more than a quarter (¼) of an inch from the previously described templet or a ten (10) foot straight edge applied to the surface of the concrete parallel to the center line of the pavement.

19. - EXPANSION JOINTS. The expansion joins shall be of an approved quality and not be less than three-eights (3-8") inch for transverse and one-half (½") inch for longitudinal joints, and shall be placed wherever directed by the Engineer, and shall be paid for by the lineal foot in place. All joints shall extend through the entire thickness of the pavement, and particular eare must be taken to have the joints perpendicular to the surface.

20. - BITUMINOUS JOINTS. The joints shall be formed by inserting during construction and leaving in place, the required thickness of joint filler which shall extend through the entire thickness of the pavement, and shall project not less than one-half (½") inch above the finished surface. They shall extend the full depth of the concrete and shall consist of a performed joint composed entirely of bituminous material of approved quality and shall be of such compsotion and consistency as not to disintegrate but will remain pliable at any temperature to which a street paving filler may be subject.

Joints composed entirely of bituminous material may be reinforced by incorporating an open meshed fabric that will allow the bituminous material to pass through and bond the concrete.

The joint filler shall be delivered in flat strips and shall be of such stiffness that it will hold its shape while being placed. When concrete is being placed at temperatures above 50 deg. F., the expansion joint shall be one-quarter (¼") inch in thickness, and for temperature below 50 deg. F., the joint shall be one-half (½") inch in thickness.

They shall be of the required depth and thickness and completely fill the space so that no gravel, cement or other foreign material will be left in the joints. For the convenience of handling and placing, all strips shall be cut in suitable lengths and all ends must be closely joined as they are laid.

21. - CURING AND PROTECTION. Except as hereinafter specified, the surface of the pavement shall be sprayed with water as soon as the concrete is sufficiently hardened to prevent pitting, and shall be kept wet until an earch or other approved covering is placed. As soon as it can be done without damaging the concrete, the surface of the pavement shall be covered with not less than two (2) inches of earth or other material approved by the Engineer, which cover shall be kept wet for at least ten (10) days. When deemed necessary or advisable by the Engineer, freshly laid concrete shall be protected by canvas until such covering can be placed.

Under the most favorable conditions for hardening in hot weather, the pavement shall be closed to traffic for at least fourteen (14) days, and in cool weather for an additional time, to be determined by the Engineer.

When the average temperature is below fifty (50) degrees Fahrenheit, sprinkling and covering of the pavement may be omitted at the discretion of the Engineer.

The contractor shall erect and maintain suitable barriers to

protect the concrete from traffic and any part of the pavement damaged from traffic or other causes, occuring prior to its official acceptance, shall be repaired or replaced by the contractor at his expense, in a manner satisfactory to the Engineer. Before the pavement is thrown open to traffic, the covering shall be removed and disposed of as directed by the Engineer.

22, - PROTECTION FROM FREEZING. No concrete shall be mixed or placed during freezing temperature except by special permission of the Engineer. If, at any time during the progress of the work, the temperature drops below 40 deg. F., the water and aggregates shall be heated. Special precuations shall be taken to prevent all concrete from freezing after it is placed in position, until the concrete has thoroughly hardened. Manure shall not be used as a protection for green concrete.

Any concrete showing injury by freezing shall be removed and replaced at the expense of the contractor.

In no case shall concrete be deposited upon frozen sub-grade.

23. - INTEGRAL CURB. Where the plans call for an integral curb, the same shall be built in accordance with the plans and sections and shall be of the same materials and proportions as used in the pavement,

After striking off the pavement, the concrete for that portion of theintegral curb above the gutter line shall be immediately deposited.

The top and inside surface of integral curb shall be given a smooth finish and completed with the pavement to the point of stopping each day's work.

24. - MEASUREMENT. Concrete pavement shall be measured exclusive of curb or curb and gutter. Integral curb shall be measured in lineal feet and such measurements shall include as curb not only portion above the level of the finished street but also the base or portion below the pavement level.

25. - CONCRETE. The concrete shall be composed of cement and sand and gravel or crushed stone in the proportions called for in the plans. Where not otherwise specified, it shall be composed of one (1) volume of cement, one and one-half (1½) volumes of sand and three (3) volumes of gravel or crushed stone. When approved by the Engineer, other methods of curing and protecting the concrete may be used.

After the foregoing period has elapsed, the covering on the concrete shall be removed, the surface of the pavement swept clean and the concrete allowed to cure for a period of three (3) days, after which the roadway may be opened to traffic.

Compacting. When the grading has been completed, and before the concrete is poured, the entire surface of the sub-grade shall be rolled not less than three (3) times with a steam roller weighing not less than three hundred and fifty (350) pounds per lineal inch of roller; or, if in the opinion of the Engineer, the use of a steam roller is unnecessary, he may permit the use of a roller weighing not less than two hundred and fifty (250) pounds per lineal inch, and all places inaccessible to a roller shall be tamped to an equal bearing. AN ORDINANCE

AMENDING AN ORDINANCE FIXING OCCUPATIONAL LICENSE TAX IN THE CITY OF MAYSVILLE, PASSED AND APPROVED THE ____ DAY OF _____, 19___, AND RECORDED ON PAGE ____ OF THE ORDINANCES OF THE CITY OF MAYSVILLE, KY.

BE IT ORDAINED BY THE BOARD OF COUNCIL OF THE CITY OF MAYSVILLE, KENTUCKY: -

That, whereas previous to the enactment of the Prohibition laws of the City of Maysville, Kentucky, the City annually received as license tax on dealers and purveyors of intoxicating liquors in excess of the sum of Ten Thousand ($10,000.00) Dollars, which was covered into the General Fund of the City of Maysville, and, tothis extent, lightened the burden of general taxation;

And, whereas there is still a considerable amount of intoxicating liquor in the aggregate sold in the City of Maysville, and a great many prosecutions for drunkenness in the Police Court of the City of Maysville, entailing considerable xpense upon the City in the matter of police protection; and the City of Maysville derives practically no revenue from those now interested in the sale of intoxicating liquor; and the law recognizes a logical gradation in the imposition of taxes bearing upon the amount of business done and the manner in which it is done;

Therefore, BE IT ORDAINED BY THE BOARD OF COUNCIL OF THE CITY OF MAYSVILLE, KENTUCKY:-

Section 1. That a graduated occupational license tax be imposed upon all physicians doing business in the City of Maysville and issuing prescriptions to persons desiring to purchase intoxicating liquor, as follows:-

Where the charge of the physician for issuing such prescriptions does not exceed Fifty Cents each prescription, the license shall be	$15.00	per year
Where the charge exceeds fifty cents but does not exceed One Dollar, the license shall be	30.00	" "
Where the charge exceeds $1.00 but does not exceed $1.50, the license shall be	50.00	" "
Where the charge exceeds $1.50 but does not exceed $2.00, the license shall be	100.00	" "
Where the charge exceeds $2.00, the license shall be	500.00	" "

Section 2. That the occupational license tax for all druggists who sell intoxicating liquors on physician's prescriptions shall be as follows:-

Where the charge per pint is $1.50, the license shall be	$15.00	per year
Where the charge is $2.00 per pint, the license shall be	30.00	" "
Where the charge if $2.50 per pint, the license shall be	50.00	" "
Where the charge is $3.00 per pint, the license shall be	100.00	" "
Where the charge is over $3.00 per pint, the license shall be	500.00	" "

Section 3. Any persons engaging in such business without first securing such license shall be guilty of a misdemeanor and, upon

conviction, shall be subject to a fine of One Hundred ($100.00) Dollars for the first offense, and Two Hundred ($200.00) Dollars for the second offense, or confined in the jail for thirty days in the discretion of the court or jury.

BE IT ORDAINED BY THE BOARD OF COMMISSIONERS OF THE CITY OF MAYSVILLE, KENTUCKY

Section 1. Definition. (a) The word "Taxicab" as used in this Ordinance means all motor vehicles propelled and operated for passage for hire subject to call from their taxi stand, or otherwise operating for hire (except motor busses, running and operating on established routes.)

(b) The word "owner" when used in this Ordinance shall be construed to mean any person, firm or corporation who has the bone fide legal title or control, direction, operation, maintenance, leasing or the collection of revenues derived from such taxicabs so operated for hire on the streets of the City of Maysville.

(c) The word "driver" when used in this Ordinance includes every person in charge of or operating any taxicab as herein defined either as agent, employee or otherwise.

Section 2. It shall be unlawful for any person to drive, operate or be in charge of any such taxicab without first having obtained a license and permit in writing from the Board of Commissioners, so to do. Applicants for such permits so to do shall file with the Commissioner of Public Safety an application in writing. Said application shall state the experience of the applicant in driving motor vehicles, the physical condition, including the eye sight of the applicant, and whether such person has ever been convicted for violation of the motor vehicle, or traffic, or criminal laws, either city, state or federal, the number of times and the various offenses charged. The said Commissioner of Public Safety shall investigate the facts stated in said application before issuing a recommendation to the Board of Commissioners, and shall not issue any recommendation for any person who has been convicted of the violation of any criminal laws, or laws against reckless driving, who is less than 21 years of age, or who in the opinion of said Commission is not physically or morally a person who should be permitted to operate such taxicab or where the safety of the public might be endangered by the granting of such permit. Every permit so granted by the Commission shall entitle the holder thereof to obtain a driver's license to drive a taxicab for one current year from the City Clerk, upon the payment of a license fee of Five ($5.00) Dollars therefor. It shall be unlawful for any owner or driver to operate a taxicab in the City of Maysville, unless the drivers' license is posted in such place in said taxicab as may be seen by the passengers using said cab.

All drivers who have been actually continuously engaged in the business of driving a taxicab for at least thirty (30) days before the effective date of this Ordinance, shall be permitted to continue to drive said cab for the current license year.

Section 3. Applications for licenses for taxicabs shall be made to the Commissioner of Public Safety, in writing, and shall set forth the name and address of the applicant, the trade name under which he does business, the class of each vehicle for capacity. If the application is granted, the applicant shall furnish the Commissioner of Public Safety, prior to the issuance of the License tag, with information covering the particular vehicle to be licensed, such information to include the make , the state license number, the length of time the vehicle has been in use, the motor power thereof, and the name and address of the person, firm or corporation from which the vehicle was purchased, and any other information required by the Commissioner, pertinent to the issuance of a license.

Section 4. Before any permit is issued for a taxicab as herein defined, the owner shall file with the Commissioner of Public Safety, a policy of accident insurance in some good and solvent incorporated insurance company, licensed and admitted to do business in Kentucky, which said policy shall continuously cover each and every taxicab owned or operated or leased by the applicant and by which the said insurance company shall be liable in the sum of not more than Five Thousand ($5,000.00) Dollars for any one accident

resulting in bodily injuries to or the death of one person, and not more than Ten Thousand ($10,000.00) Dollars, total liability on account of any one accident resulting in bodily injuries to, or the death of more than one person regardless of whether the taxicab was being driven by the owner, his agent or lessee. Said policy shall further provide that the said insurance company shall be liable in the sum of One Thousand ($1,000.00) Dollars for any and all property damage which may occur by reason of the negligence or careless operation of any taxicab covered by said policy, and regardless of whether the taxicab was being driven by the owner, his agent or lessee or licensee.

Said policy shall further provide that insolvency or bankruptcy of the insured shall not release the insurance Company from any payment due under said policy and if by reason of such insolvency or bankruptcy an extension on a judgment against the insured is returned unsatisfied, the judgment creditor shall have a right of action against the company to cover the amount of said judgment to the same extent that the insured would have had to recover against the company had the insured paid the judgment.

Said policy shall further provide that it may not be cancelled until after thirty (30) days notice to the said Commissioner of Public Safety.

If the said owner shall fail within the said thirty (30) days to provide another policy of like kind and manner, then the permit and license provided for herein shall be revoked by the said Commissioner of Public Safety as of the day said insurance ceases to be in effect.

Provided, however, that the owner of any taxicab may in lieu of carrying liability insurance as herein provided, deposit and maintain throughout the term of the said permit or license with the Commissioner of Public Safety, a bond with corporate surety approved by said Commissioner in the sum of not less than Thirty Thousand ($30,000.00) Dollars, running to the City of Maysville, conditioned that in the event of any injury or damage to any person or property growing out of the negligence of any taxicab owned or operated or leased by the insured, the person or persons so injured in his or their person or property shall have a right of action thereon in the sum of not more than Five Thousand ($5,000.00) Dollars, for any one accident or death and not more than Ten Thousand ($10,000.00) Dollars total liability on account of any one accident resulting in bodily injuries to or the death of more than one person, and in the sum of not less than One Thousand ($1,000.00) Dollars for any and all property damage, and regardless of whether the driver of the taxicab at the time of the accident is the owner, his agent or lessee.

Section 5. The Commissioner of Public Safety shall investigate and hold a hearing as to each application for license for a taxicab, and if the Commissioner of Public Safety finds from such investigation and hearing that the public convenience and necessity justifies the operation of the vehicle for which the license is desired, he shall forthwith make his recommendations to the Board of Commissioners, who shall upon the granting of such license forthwith direct the City Clerk to issue the license to the applicant, and the City Clerk shall issue such license upon the payment of a $15.00 fee for each cab to be licensed, and the furnishing of the bond or insurance as required. The City Clerk shall give the applicant a serial number and shall mark same on the license. Upon receiving the license the owner will have printed on both sides and/on the back of the cab to be operated under such license the serial number set out on said license. If the applicant does not comply with the requirements of this section within Sixty (60) days the findings of the Commission shall be null and void.

If the Commission finds from such investigation herein that the public convenience and necessity do not justify the operation of the vehicle for which a license is desired, the applicant shall forthwith be notified of the Commission's findings.

The Commission shall, however, at no time, after the date of passage of this ordinance issue a license certificate to more

than Five (5) taxicabs within the City of Maysville to be operated at the same time. However, any person who is the owner and operates a taxicab over the Streets of the City of Maysville for a period of Ninety (90) days preceding the date of passage of this ordinance, shall be permitted to renew his license as long as he keeps a cab in continuous operation, but should any person's license be revoked or allowed to expire, then with the restrictions prescribed the number of cabs to be operated over the streets of Maysville shall be in full force and effect.

Section 6. No person, firm or corporation, or any owner, agent, employee or driver, of a public vehicle shall:

(1) Operate over any fixed or regular route, or

(2) Pass any specified point on a fixed or regular time schedule for the purpose of picking up passengers, or,

(3) When hired, accept other passengers for compensation, or accept payment for transportation for any other person than the person who has hired the vehicles, or make any charge to the person so hiring the vehicle other than in accordance with the rates on file with the Commissioner.

(4) Make up parties on the public street or public places or solicit patronage for a vehicle already hired.

Public Vehicles shall at all times, when in operation and not engaged, furnish service on demand to any orderly person for lawful purposes.

Section 7. All fares and charges for the use of the taxicab shall be without exception where the trip begins and ends within the City limits of Maysville, and within one mile thereof and not less than 25 cents for the first passenger and not less than five cents extra for each additional passenger over one.

Section 8. It shall be unlawful for any owner or owners of any taxicab to permit the same to be driven for hire by any one who is not a licensed taxicab driver, as prescribed by this Ordinance.

Section 9. Any person who uses a taxicab for any unlawful or immoral purposes shall be fined not more than One Hundred ($100.00) Dollars or less than Ten ($10.00) Dollars or imprisoned not more than thirty (30) days or both.

When such unlawful or immoral use has occured with the knowledge of the person owning the public vehicle he shall be subject to the above penalty or penalties and shall have his license revoked.

When such unlawful or immoral use has occurred with the knowledge of the person driving the public vehicle, the City Commission after a hearing shall revoke the driver's license of said person and he shall be subject to the same penalty as stated in paragraph one in this section.

Section 10. Taxicab drivers shall remain in or at their cabs when standing at the curb. It shall be unlawful for a taxicab to cruise.

Section 11. No public vehicle shall carry more passengers than the number designated as its seating capacity in the application on which the license was issued.

COMMISSIONERS ORDINANCE NO. 54.

AN ORDINANCE AUTHORIZING THE FUNDING OF THE PRESENT FLOATING INDEBTEDNESS OF THE CITY OF MAYSVILLE, TO THE AMOUNT OF $65,500.00 AND THE ISSUANCE OF FUNDING BONDS OF SAID CITY, AGGREGATING SAID AMOUNT, SUBJECT TO APPROVAL OF A COURT OF COMPETENT JURISDICTION, PURSUANT TO SECTIONS 186-C-6 to 186-C-8 INCLUSIVE, KENTUCKY STATUTES, AND AUTHORIZING AND DIRECTING THE ADVERTISING AND OFFERING OF SUCH BONDS FOR SALE SUBJECT TO SUCH APPROVAL FOR A SINKING FUND TO RETIRE SAID BONDS OVER A PERIOD OF YEARS.

BE IT ORDAINED BY THE BOARD OF COMMISSIONERS OF THE CITY OF MAYSVILLE, KENTUCKY

That, whereas, the City of Maysville, Kentucky is a City of the Third Class under the Statutes of Kentucky, and said City is now obligated for and upon various bonds issued by it and certain notes, a floating indebtedness evidenced thereby in the aggregate sum of $65,500.00.

And, whereas, said debt has been lawfully incurred and created by reason of emergencies and necessities of past years, the economic depression, the necessity of care of the poor and indigent, and the acquisition of essential equipment and materials for fire protection and other governmental uses and purposes, improvements and costs necessitated by the great flood of 1937 of the Ohio River, and lessor and more frequent floods of said river from time to time, by the shrinkage of income due to depression and delinquent taxes, and from causes lost to view and unknown to the present City Administration and officials and accumulated over many previous years so that a large part of the total of the floating debt is embraced in such year to year accumulations from such unknown causes and long standing delinquencies,

And, whereas, all of such indebtedness was when created within the applicable constitutional limitations upon indebtedness of this municipality and were and are valid, binding obligations on the City of Maysville, and the officers thereof have had due regard for the finances of said City at the times of creation and incurring of said debts,

And, whereas, the City has acquired valuable property by reason of a portion of such obligations which met imperative and indespensable needs and emergencies of said City, and which properties will increase in value and largely off-set such indebtedness and will in part enable the City to save money on its current expenses,

And, whereas, the funding of said outstanding indebtedness will result in great saving of interest charges to said City and will place its finances upon a better and sounder basis, and it is deemed wholly advantageous to so fund said indebtedness.

BE IT THEREFORE ORDAINED BY THE BOARD OF COMMISSIONERS OF SAID CITY OF MAYSVILLE, KENTUCKY:-

That said indebtedness of said City in the amount of $65,500.00, be funded, and that the said City issue its bonds to fund same, in said aggregate principal amount, in multiples of $500.00 and to be numbered 1 to 66, both inclusive, and bearing interest at a rate not to exceed 3½ per centum per annum from date, with coupons to be thereto annexed for each semi-annual interest installment, interest to be paid semi-annually from date thereof. The City of Maysville, Kentucky, expressly reserves the right to retire any or all of said bonds on any interest paying date, before maturity.

The Mayor and the Clerk of said City are hereby authorized, empowered and directed as and when the bonds shall have been approved by a Court of competent jurisdiction to execute and issue such bonds for and on behalf of said City; on any interest coupons with the facsimile signatures of said Mayor and Clerk shall be used.

Said bonds shall mature as follows: Serially in the order of their number over a period of(30)thirty years as may be hereafter and shall be, in later ordinance or resolution, determined in respect to annual returns. Said Bonds and interest coupons shall be payable and redeemable at the Office of the Treasurer of the City of Maysville, Kentucky, or at the designated lawful depository of said City.

There shall be set up, upon approval of said Court and upon the issuance of said bonds, a sinking fund for the payment of interest upon said bonds and the retirement or payment thereof over said periods of maturity, which sinking fund shall be held separate and apart from all other funds of said City and to be applied solely to the payment of interest & principal of said bonds.

The form of said bonds shall be substantially as follows:-
