413 N. Main Street
Mooresville, NC 28115

Rocky River Wastewater Treatment Plant

1. Background and Intent

House Bill 1160, the Clean Water Act of 1999, was ratified by the North Carolina General Assembly on July 20, 1999, and signed into law by the Governor on July 21, 1999. This legislation placed significant reporting requirements on entities that own or operate wastewater systems.

Reporting requirements include specific items such as the number of wastewater overflows, violations of permit conditions or environmental regulations, as well as the impact of any such violations on the environment and the corrective measures taken to minimize recurrences.

The Town of Mooresville Utility Division establishes compliance through this annual report and shares with the public ways they can help ensure the collection system's reliability.

2. Wastewater System Description

The Town of Mooresville owns and operates a wastewater collection and treatment system. The collection system consists of approximately 286 miles of gravity sewer pipelines, over 7,300 manholes and 57 wastewater lift stations, serving over 18,000 accounts. Water and Sewer Maintenance includes 32 staff members who operate, maintain, and repair the collection system.

This system conveys untreated wastewater to the Rocky River Wastewater Treatment Plant (RRWWTP), located on Johnson Dairy Road. The RRWWTP is a conventional wastewater treatment rated for 7.5 million gallons per day (MGD) of average flow. It operates with a staff of 19 including operators, lab analysts, maintenance staff and environmental compliance. During Fiscal Year 2021-2022, the RRWWTP treated an average of 4.73 million gallons of wastewater per day.

The treated water must comply with stringent state and federal permit limits and conditions as set forth in the issued NPDES permit. The treated water is discharged into Dye Creek in the Yadkin/Pee Dee River Basin. The residuals generated during the process are processed into a Class A residual which is distributed to local farms though out the area. When Class B residuals are generated, they are transported to a landfill for disposal.

The documented removal efficiencies were as follows for the RRWWTP in this reporting year:

BOD:	99.1%
TSS:	99.0%
NH ₃ :	99.6%
Oil/grease:	100.00%

3. Wastewater System Projects

The Town of Mooresville continually performs pro-active preventative maintenance to the collection system to prevent wastewater overflows.

The following maintenance projects were completed during this reporting year:

Wastewater Collection System

- Root Control 4.13 miles of pipe
- Sewer Line Inspections: 9.84 miles
- Sewer Mains Cleaned: 51.59 miles
- Lift Station Wet Wells Cleaned: 51
- South Iredell Pump Station: Wet well rehabilitation and automatic rake installed
- Hospital force main moved to discharge in Mt Mourne Outfall
- Installation of new 24" inch Northside force main and moved to Rocky River Outfall
- SSES of Northside basin-smoke tested 10.44 miles of pipe, 51 manholes inspected. In-house repairs made based on SSES results.

RRWWTP

- Rebuilt both 200hp submersible pump at Rocky River Lift Station
- Rebuilt RoDisc effluent filter #2 and upgraded to stainless mesh (capital project) (3 of 4)
- Replaced gear reducer and carrier bearings on screw lift pump #2 & #3
- SCADA radio upgrades at headworks

4. Wastewater Collection System Overflows

The Town of Mooresville investigated approximately 97 municipal and private potential wastewater overflows during the past fiscal year. The Town of Mooresville reports in accordance with North Carolina General Statutes and NCDEQ guidance. Discharges of untreated wastewater to surface waters of the State or overflows that exceed 1,000 gallons are reported to NCDEQ. The Town of Mooresville reported 2 overflows within this past fiscal year which are listed in Table 5-1.

Table 5-1

Wastewater Collection System Overflows Resulting in Spill or Overflow of Wastewater				
Date	Address	Cause	Spill Volume (gallons)	Surface Water
9-28-21	100 W Maranta Road	HOA draining pool directly to manhole	200	Lake Norman
4-8-22	217 Gabriel Drive	Roots	2,400	South Fork Withrow Creek

Customers are reminded that they have a part in maintaining the Town’s wastewater system. Never put oils, liquid or solid greases, fatty meat, or other food scraps down a drain – even if you use a motorized garbage disposal or use hot water to melt grease. Never flush disposable wipes, paper towels, cotton swabs, or similar items.

Always remove solidified grease from kitchen utensils, equipment, and food preparation areas with scrapers or paper towels and dispose of scrapings and towels in trash cans.

Report anyone discharging liquids or other substances into open municipal sewer manholes or acts of vandalism to manholes, sewers, lift stations or other structures to the Public Utilities Department at 704-664-3705.

5. NPDES Violations

NCDEQ issued a Notice of Violation to the Town for the overflow on:

4-8-2022 at 217 Gabriel Drive- Roots caused a mainline stoppage resulting in an overflow of 4,200 gallons.
