

Niagara County Stormwater Management

Public Reporting of Stormwater Illicit Discharges

This form is used to report potential illicit discharge contamination of stormwater on Niagara County property only. An illicit discharge is defined as “discharges not entirely composed of stormwater”. If you suspect that an entity is illegally discharging to anything other than a stormwater system, please speak with your local law enforcement.

If you wish to report illegal discharge to stormwater systems not belonging to Niagara County, please contact the local Stormwater Management Officer of the locality where the potential illicit discharge is occurring. If they do not have a local Stormwater Management Officer and are unable to provide a suitable contact, you may contact the New York State Department of Environmental Conservation for further assistance.

Please print and provide as much detail as possible. Use the back of this sheet if necessary.
