

A Snapshot of Hollis

The following data is a projection of what Hollis might expect at buildout. "Buildout" is a theoretical condition that exists when all available land suitable for residential and nonresidential construction has been developed. Within the set parameters, buildout represents the carrying capacity of an area, community, or region. By examining development requirements, past development patterns, and an inventory of developable space, a community can produce an estimate of the type and amount of future growth it can expect.
