

Smoke Detector Request

Studies show that more than 60 percent of deadly U.S. fires occur in homes that do not have smoke alarms installed or have alarms that do not function because of missing batteries, dead batteries or some other problem that keeps them from working properly. According to the National Fire Protection Association (NFPA), 40 percent of U.S. residential fire deaths result from fires in homes with no smoke alarms, while 23 percent occurred in homes without working smoke alarms.

To ensure fire safety, families should regularly check smoke detectors by pushing the test button, plan at least two escape routes from their homes and practice those escape routes with the entire family. Batteries should be changed at least once a year and tested monthly to ensure that they are operating properly.

Resident Information

Name: _____

Address: _____

Phone: _____

Number of Levels/Floors in home (including Basement): _____

Numbers of Bedrooms/ Sleeping Ares in home: _____

Submission of this form tells our department that your household is agreeing to changing the batteries in smoke alarms at least once a year and tested monthly to ensure that they are operating properly.

If assistance is required to replace batteries, please call (314) 645-5077.
