

Go Paperless—

If you would like your future bills to be emailed to you, please email your name, address, property location and email you wish sent to: wpc@staffordct.org

1- Administration Building

Payments accepted here

2- Pretreatment Area - Grit Removal, Mechanical Screen

Removal of all large particles to eliminate abrasion on equipment

3- Aeration Tanks (Biological Process)

Bacteria is given oxygen to thrive and consume the organic waste

4- Clarifiers

Activated biosolids/sludge settles here and is either returned back to the aeration process or wasted into the thickeners for final removal

5- Filter Building

Removal of copper, lead, zinc

Final removal of suspended solids

6- Thickeners

Settled sludge is removed from here and transported to the MDC in Hartford for final disposal

7- Ultraviolet Disinfection

Effluent flows through here in order to disinfect/kill any remaining disease-causing bacteria before final release into the Willimantic River.

Stay informed with any new information posted to the Water Pollution page on the Town's website.
