

DISPOSAL GUIDE

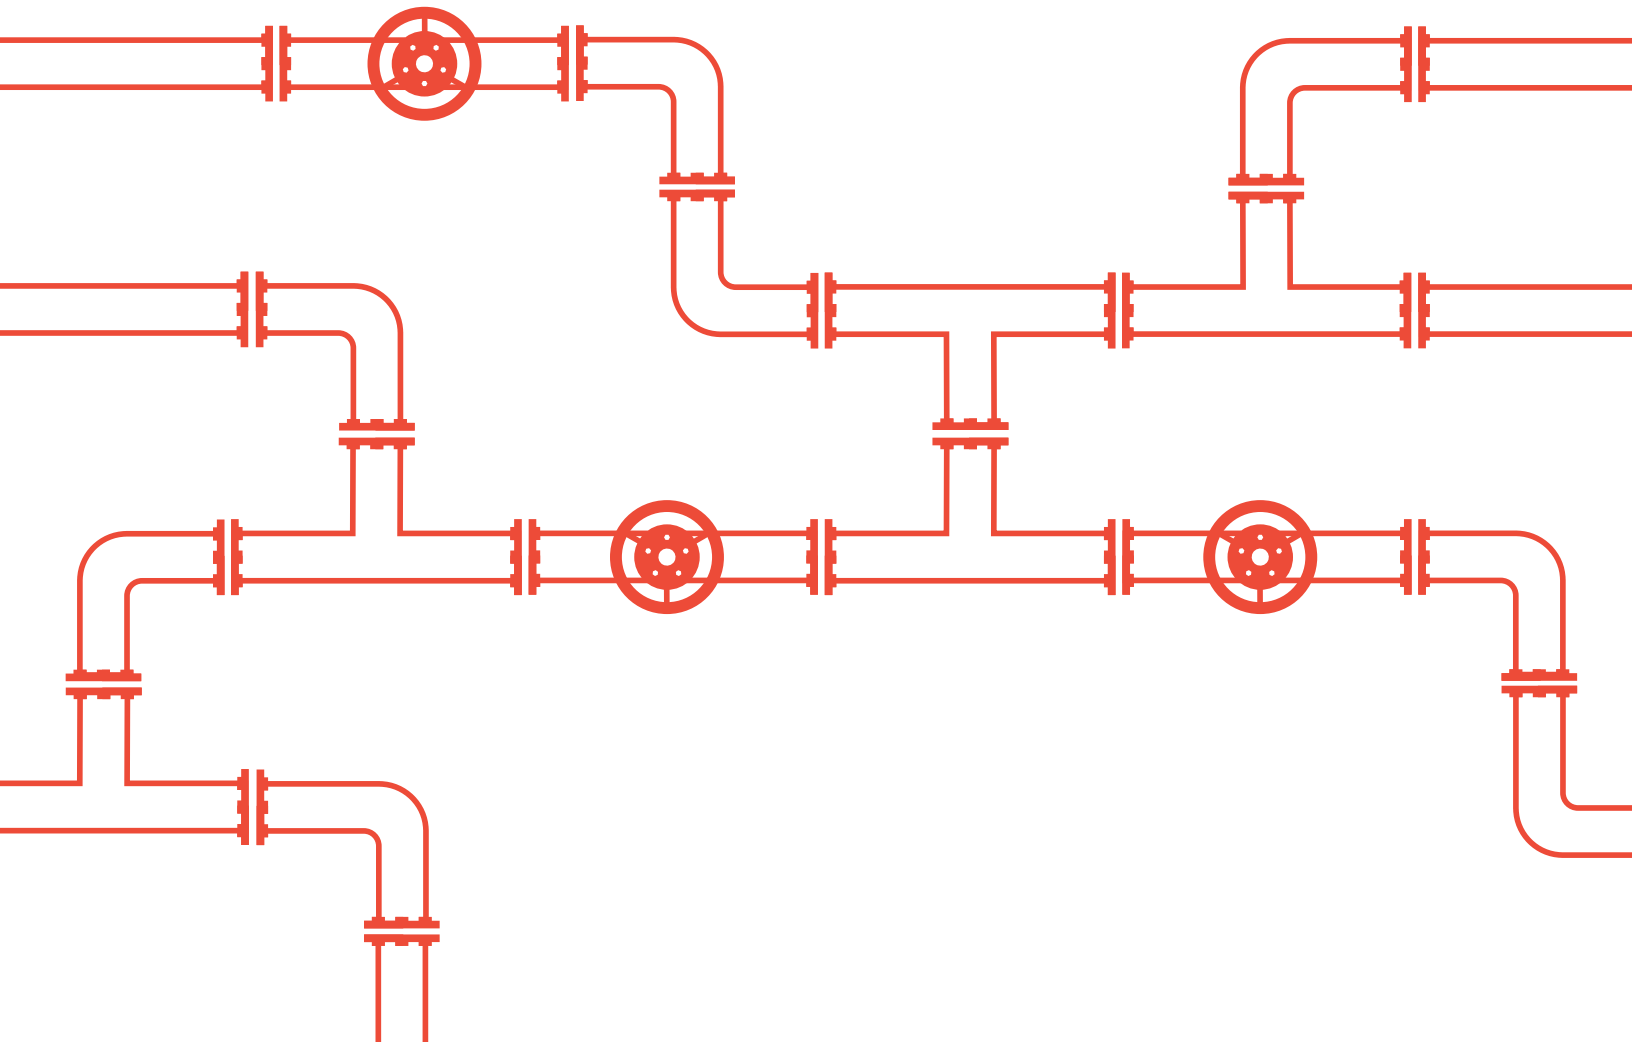

ECO-FRIENDLY BUSINESS TOOLKIT

DID YOU KNOW?

The storm drain system does not remove any pollutants from the water before discharging into streams, bayous, lakes and bays. What you put in, must come out.

You can help prevent pollutants from reaching our waterways by complying to these best practices.

BEST PRACTICES

PROPER CLEANING

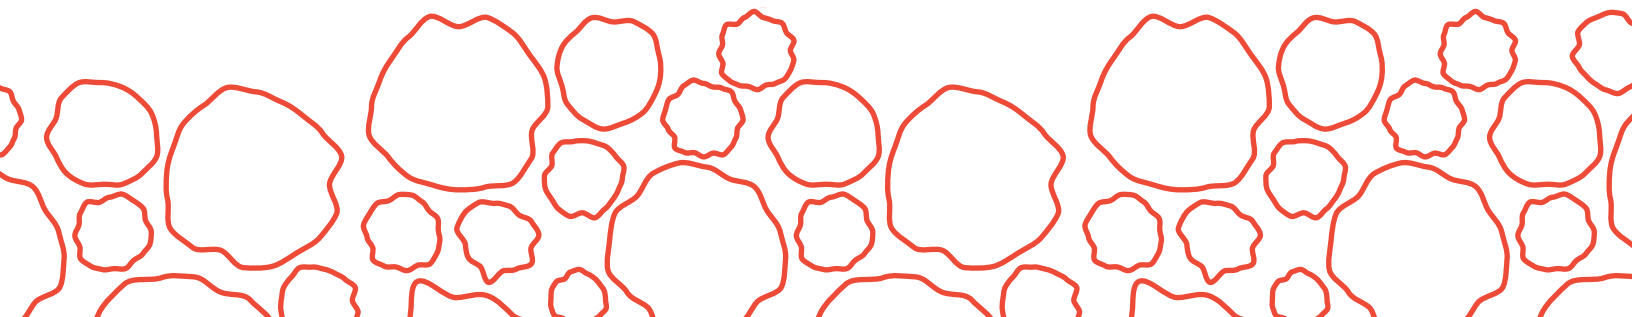

- Always empty wash water and mop buckets into a mop sink. Do not pour the water outside or into storm drains.
- Wash off floor mats and garbage cans in a mop sink.
- Inspect outside your restaurant for trash and clean regularly.
- Do not hose off restaurant or kitchen floors to the outside.

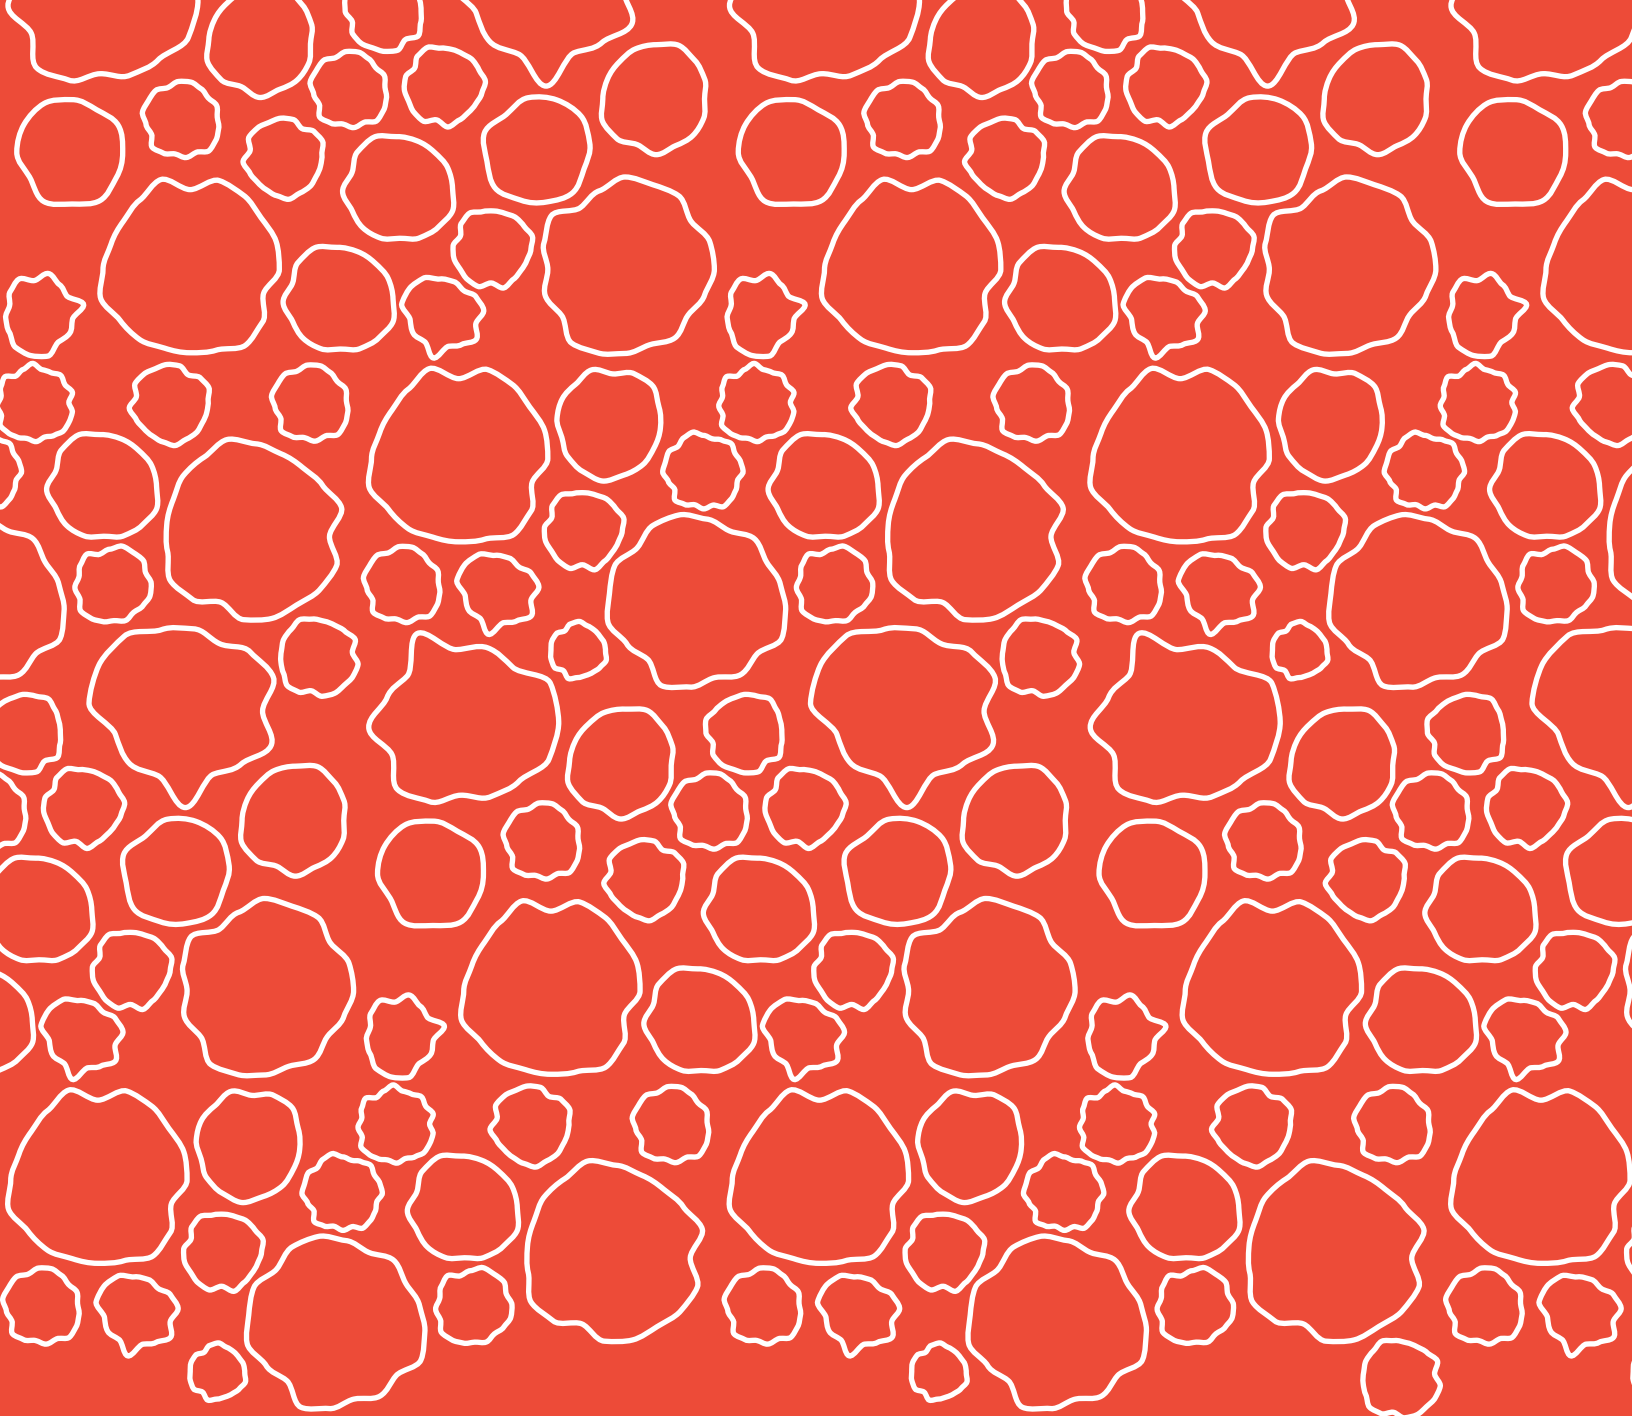

GARBAGE DUMPSTERS

- Do not rinse out dumpsters. Request a replacement when it shows signs of wear.
- Keep dumpster lids closed and ensure that the dumpster drain plug is in place and secure.
- Do not dump liquids, fats, oils or grease (FOG) into the dumpsters.
- Avoid overfilling dumpster.

FATS, OIL AND GREASE (FOG)

- Do not dispose of fats, oils or grease in floor drains, sinks or storm drains.
- Recycle or dispose of in the trash in a sealed container.
- Maintain clean sewer lines and grease traps.
- Use drying agents (kitty litter or towels) to clean up spills.
- More information here: stpete.org/FOG
