I. INTRODUCTION

The purpose of this report is to present certain financial information relative to the Town of Scituate, Rhode Island Postretirement Health Insurance Program in accordance with the Statement of Governmental Accounting Standards Board No. 75 (GASB 75).

The report presents the actuarial valuation for the Town of Scituate, Rhode Island Postretirement Health Insurance Program as of March 31, 2022. This information includes the determination of Actuarially Determined Contribution (ADC) and OPEB cost, disclosure of the Net OPEB Liability(NOL) and Funding Progress as well as other Required Supplementary Information. Sensitivity analysis on various financial and demographic assumptions is also provided.

This report was based on information submitted to our firm by the Town of Scituate, Rhode Island in the form of census data, substantive plan provisions, medical premium rates, asset/benefit payment information, and other ancillary material pertaining to the plan.

Actuarial computations under GASB 75 are for purposes of fulfilling employer accounting requirements. The calculations reported herein have been made on a basis consistent with my understanding of GASB 75 and are in conformity with applicable actuarial standards of practice. To the best of my knowledge, the information contained in this report was determined in accordance with GASB 75. In addition, no relationship exists with the plan or plan sponsor that impairs the objectivity of our work.

I meet the GASB 75 Qualification Standards of the American Academy of Actuaries to render the actuarial opinions included in this report, based upon my education, experience and continuing education.

II. DESCRIPTIVE INFORMATION

Plan Description: Single-employer, defined benefit postretirement health and dental insurance program.

Groups Covered & Eligibility:

The Town of Scituate, Rhode Island can be separated under five groups of employees. Each group is covered under a separate contract with the Town. The groups are:

Certified Teachers
Non-Certified School Employees
Department of Public Works (DPW)
Police Department
Other Non-Union Town Employees

Town and school members are eligible for retirement at age 58 with 10 years of service or at any age with 30 years of service. Police officers are eligible at age 55 with 10 years of service or at any age with 25 years of service (20 years of service if hired before July 1, 2000).

Benefit Formula: **Certified Teachers:** Upon retirement, certified teachers are eligible to purchase medical and dental insurance (single or family) up to age 65 and pay 100% of the premium. The postretirement cost to the Town will be the implicit rate subsidy.

Non-Certified School Employees: Upon retirement, non-certified school employees are eligible to purchase medical and dental insurance (single or family) for 18 months under COBRA. The COBRA benefits do not constitute a benefit to be included in determination of OPEB liabilities. Therefore, we note this provision exists but it is not included in liabilities or costs valued in this report

Police Department: Police officers that are hired after July 1, 2000 with 20 years of service are eligible for medical and dental insurance (single or family). The police officer will contribute 50% of the premium towards his/her coverage.

II. DESCRIPTIVE INFORMATION (cont'd)

Benefit Formula
(cont'd):

DPW and Town Employees: DPW and Non-Union Town Employees upon retirement are eligible for individual medical insurance coverage. Retired members must contribute the following towards their premium coverage:

Service	Contribution
10-15	100%
16-22	21%
23-29	10.5%
30+	0%

Town employees are also eligible to contribute 100% of the remaining premium towards family coverage.

In addition, a town employee may purchase dental insurance through COBRA for up to 18 months. The COBRA benefits do not constitute a benefit to be included in determination of OPEB liabilities. Therefore, we note this provision exists but it is not included in liabilities or costs valued in this report.

Life Insurance coverage is not provided to retirees.

Demographic Experience:

The Total OPEB Liability decreased by approximately \$2,500,000 (24.0%) as a result of demographic experience more favorable than assumed.

Significant Events:

None.

III. ACTUARIAL METHODS

Measurement Date: April 1, 2021 (for purposes of determining the OPEB Expense) and March 31, 2022 (for purposes of Net OPEB Liability)

Actuarial Cost Method: Costs have been computed in accordance with the Entry Age Actuarial Cost Method. The service cost is the sum of the service costs for all participants. For an active participant, the individual service cost is (a) the present value of future benefits as of the participant's entry age divided by (b) the present value of future compensation as of the participant's entry age multiplied by (c) current compensation. For other than a current active participant, the service cost equals \$0.

The accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability is equal to (d) the present value of future benefits less (e) the service cost accrual rate multiplied by (f) the present value of future compensation.

Asset Valuation Method: The Fiduciary Net Position is based on the fair market value of assets as of the measurement date.

Amortization of Unfunded Liabilities: The portion of unfunded actuarial liabilities included in the ARC is determined using the level dollar thirty year open amortization basis.

Census Information: Census data and premium information as of April 1, 2020 was used to calculate the OPEB Expense. Census data and premiums information as of April 1, 2022 was used to determine the Total OPEB Liability as of March 31, 2022.

Net OPEB Liability at Fiscal Year End: Based on actual benefit payments, actual contributions to the Plan trust (if applicable), and estimated implicit rate subsidy, for the fiscal year ending March 31, 2022.

IV. ACTUARIAL ASSUMPTIONS

Actuarial assumptions are estimates as to the occurrence of future events impacting the costs of the plan such as mortality rates, withdrawal rates, medical trend rates, retirement ages, rates of investment earnings, etc. The assumptions have been chosen to anticipate the long-term experience of the plan.

B. Net OPEB Liability as of March 31, 2022

The Net OPEB Liability for the Plan was measured as of March 31, 2022, and the Total OPEB Liability used to calculate the Net OPEB Liability was determined by an actuarial valuation as of April 1, 2022.

The components of the Net OPEB Liability of the Plan as of March 31, 2022, were as follows:

Total OPEB Liability	\$6,891,129
Plan Fiduciary Net Position	\$ (1,531,825)
Net OPEB Liability	<u>\$ 5,359,304</u>
Plan Fiduciary Net Position as a percentage of the Total OPEB Liability	22.23%

The discount rate used to calculate the Total OPEB Liability was 3.65%.

XV. GLOSSARY FOR OPEB AND GASB 75

Actuarial Accrued Liability (AAL) – That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value (APV) of plan benefits and expenses allocated to all periods prior to the valuation date. This is the amount of the APV not provided by future Normal Costs.

- a) 100% of the actuarial present value of benefits expected to be paid (APV) to:
 - i) Retirees and their dependents
 - ii) Active employees who have attained their expected retirement date and their dependents
- b) Proportionate amount, based on employee service recognized up to the valuation date, of the actuarial present value of benefits expected to be paid (AAL) for active employees who have not yet attained their expected retirement date.

The AAL is the benefit obligation disclosed in the financial statements representing current plan liability.

Active Plan Participant – Any active employee who has rendered service during the credited service period and is expected to receive benefits, including benefits to or for any beneficiaries and covered spouses.

Actuarial Cost Method or Funding Method – A procedure for determining the Actuarial Present Value of OPEB plan benefits and expenses and for developing an actuarial equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

Actuarial determined contribution (ADC) – A target or recommended contribution to a defined benefit OPEB plan for the reporting period, determined in conformity with Actuarial Standards of Practice based on the most recent measurement available when the contribution for the reporting period was adopted.

Actuarial Present Value of Total Projected Benefits (APV) – The actuarial present value of the cost to finance, as of a specified date, all future benefit costs or a series of benefit costs, with each amount adjusted to reflect (a) the time value of money (through discounts for interest) and (b) the probability of payment (for example, by means of decrements for events such as death, disability, withdrawal or retirement) between the specified date and the expected date of payment. This includes benefits to current active members, terminated employees entitled to benefits but not yet receiving them, if any, retirees, their beneficiaries and any covered dependents pursuant to the terms of the OPEB plan. Expressed another way, it is the amount that would have to be invested on the valuation date so that the amount invested plus investment earnings will provide sufficient assets to pay total projected benefits when due.

Amortization Payment – That portion of the plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability (UAAL).

Attribution Period – The period of an employee's service to which the actuarial present value of total projected benefits for that employee is assigned. The beginning of that period is generally the employee's date of hire and the end of the attribution period is the full eligibility date.

XV. GLOSSARY FOR OPEB AND GASB 75

Discount Rate – The single rate of return that, when applied to all projected benefit payments, results in an actuarial present value of projected benefit payments equal to the total of the following:

- a. The actuarial present value of benefit payments projected to be made in future periods in which (1) the amount of the OPEB plan's fiduciary net position is projected (under the requirements of this Statement) to be greater than the benefit payments that are projected to be made in that 35 period and (2) OPEB plan assets up to that point are expected to be invested using a strategy to achieve the long-term expected rate of return, calculated using the long-term expected rate of return on **OPEB** plan investments
- b. The actuarial present value of projected benefit payments not included in (a), calculated using a yield or index rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher (or equivalent quality on another rating scale).

Entry Age Actuarial Cost Method – A method under which the actuarial present value of the projected benefits of each individual included in an actuarial valuation is allocated on a level basis over the earnings or service of the individual between entry age and assumed exit age(s). The portion of this actuarial present value allocated to a valuation year is called the normal cost. The portion of this actuarial present value not provided for at a valuation date by the actuarial present value of future normal costs is called the Actuarial accrued liability (AAL).

Full Eligibility Date – The date at which an employee has rendered all service necessary to receive full benefits under the plan.

Gains and Losses – Changes in the Unfunded Actuarial Accrued Liability (UAAL) that is the result of actual experience of the plan being different than what was expected.

Health Care Cost Trend Rate (HCCTR) – An assumption about the annual rate(s) of change in the cost of health care benefits which are currently provided by the Postemployment benefit plan, due to factors other than changes in the composition of the plan population by age and dependency status, for each year from the measurement date until the end of the period in which benefits are expected to be paid. The Health Care Cost Trend Rate implicitly considers estimates of health care inflation, changes in health care utilization or delivery patterns, technological advances, and changes in the health status of the plan participants.

Differing types of service, such as hospital care and dental care, may have different trend rates as may service for different portions of the plan population, such as Medicare eligible and non-Medicare eligible members.

XV. GLOSSARY FOR OPEB AND GASB 75

Implicit Rate Subsidy – It is a common practice to permit retired employees to continue in the plan sponsor's group health insurance plan at their own cost once eligibility for plan sponsor paid benefits is exhausted. This practice creates an OPEB liability based on the theory that retirees have higher utilization of health care benefits than active employees. Therefore, unless the premium rate for retirees is set to fully recover their health costs, the premium for active employees is implicitly overstated to subsidize utilization by retirees. This is called implicit rate subsidy. This rate subsidy is considered a benefit subject to OPEB valuation, included in GASB75.

The OPEB liability normally includes the cost of the implicit rate subsidy for the years in which the retiree is paying the insurance costs for continued coverage. When the retiree is eligible for Medicare, the cost of coverage is generally much closer to the premium cost. Therefore, there is no OPEB liability assumed for Medicare-eligible retirees paying 100% of the premium.

Interest on Total OPEB Liability – The accrual of interest on the TOL for the year of the valuation. It is calculated by applying the beginning of year Discount Rate to the sum of the Expected Benefit Payments and TOL as of the beginning of year.

Market Value (or Fair Value) of Plan Assets – The amount that a plan could reasonable expect to receive for an investment in a current sale between a willing buyer and a willing seller.

Market-Related Value of Plan Assets – A balance used to calculate the Expected Return of Plan Assets. Market-related value can be either fair value or a calculated value that recognizes changes in fair value in a systematic and rational manner over not more than five years.

Normal Cost – The portion of the Actuarial Present Value of Total Projected Benefits (APV) attributed to employee service during a valuation year by the Actuarial Cost Method.

Net OPEB Liability – The liability of employers and nonemployer contributing entities to plan members for benefits provided through a defined benefit OPEB plan that is administered through a trust that meets the criteria in paragraph 3 of GASB 74.

OPEB Assets – The amount recognized by an employer for contributions to an OPEB plan greater than the OPEB expense.

OPEB Expenditures – The amount recognized by an employer in each accounting period for contributions to an OPEB plan on the modified accrual basis of accounting.

OPEB Expense – The amount recognized by an employer in each accounting period for contributions to an OPEB plan on the accrual basis of accounting.

OPEB Liabilities – The amount recognized by an employer in each accounting period for contributions to an OPEB plan less than OPEB expense/expenditures.

XV. GLOSSARY FOR OPEB AND GASB 75

Open Group/Closed Group – Terms used to distinguish between two classes of Actuarial Cost Methods. Under an Open Group Actuarial Cost Method, Actuarial Present Values associated with expected future entrants are considered; under a Closed Group Actuarial Cost Method, Actuarial Present Values associated with expected future entrants are not considered.

Pay-As-You-Go (PAYGO) – A method of expensing retiree medical benefits recognizing as an expense the cash currently paid as benefits to retirees, spouses and covered dependents. The minimum method of financing a plan, having no pre-funding until benefits actually become payable.

Per Capita Benefit Cost by Age – The current cost of providing OPEB health care benefits for one year at each age from the youngest age to the oldest age at which plan participants are expected to receive benefits under the plan.

Plan Fiduciary Net Position – Assets which have been irrevocably dedicated to the payment of benefits under the plan.

Postemployment – The period between termination of employment and retirement as well as the period after retirement.

Postemployment Benefits – All forms of benefits, other than retirement income (pensions), provided by the employer to the retiree, including, but not limited to, health care, life insurance and legal assistance.

Substantive Plan – The terms of a postemployment benefit plan as understood by an employer and plan members that provides postemployment benefits to the employees who render services in exchange for those benefits. The substantive plan is the basis for the accounting for this transaction. In some situations an employer's cost-sharing policy, as evidenced by past practice or by communication of intended changes to a plan's cost-sharing provisions, or a past practice of regular increases in certain monetary benefits may indicate that the substantive plan differs from the existing written plan.

Total OPEB Liability – The portion of the actuarial present value of projected benefit payments that is attributed to past periods of member service in conformity with the requirements of GASB 74. The total OPEB liability is the liability of employers and nonemployer contributing entities to plan members for benefits provided through a defined benefit OPEB plan that is not administered through a trust that meets the criteria in paragraph 3 of GASB 74.

Unfunded Actuarial Accrued Liability (UAAL) -- The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.

Valuation Date – The date as of which the plan assets and OPEB obligations are measured.
