

Customer Owned Fuel Piping/Lines

The City of Two Harbors is required to notify customers that the City does not maintain any piping or fuel lines on the customer side of a meter, including buried fuel lines.

Natural Gas is delivered by an underground service line running from the main line located in the street or alley to the meter. The City is responsible for maintenance, repair and locating of the service line including the meter and regulator.

The customer is responsible for the piping from the outlet of the meter into the building. In some occasions, a fuel line is buried on the customer side of the meter. If the fuel line is not maintained, it may be subject to potential hazards of corrosion (rust) and leaks. To prevent hazards, do the following:

1. Inspect fuel lines periodically for leaks.
2. If fuel line is metal, inspect periodically for corrosion.
3. Repair any unsafe conditions.

The City can assist customers with locating fuel lines. Contact qualified heating or plumbing contractors to provide inspection and repair of fuel lines.

If you have any questions, call the City Gas Department at 218-834-8812
