

Edna G Commission
February 16, 2022

- Paul LaMarre gave an update from his site visit in November.
- He thanked the group for the hospitality during the visit.
- He stated the tug is in no immediate danger of sinking.
 - The void space between the coal bunker and the boilers is unknown and could be of concern. He shared a photo that showed a lot of deterioration. This space needs to be looked at in more detail.
 - Other parts of the tug are in relatively good shape.
- Paul wants to have another visit to look at the void space to see what work needs to be done.
- The Tug could be in the water for the next 10-20 years as long as there is a Tom K. type person and committed group to care for the Tug.
- Paul wants to talk with the commission more in-depth about the use of the tug in the future.
- Paul suggested these steps for the future of the Tug
 - An operational plan needs to be developed for the tug as an attraction.
 - Friends of Edna G needs to have a business plan developed.
 - A Preservation Plan for Tug is needed
- Paul thinks he can report back to the Commission/Council in June with the condition report and a road map to the future of the Tug.

Respectfully Submitted
