8. Binding Effect. This Agreement shall be binding on and inure to the benefit of the parties and their heirs, personal representatives, successors, and assigns.

9. Attorney Fees. If any suit or action is filed by any party to enforce this Agreement or otherwise with respect to the subject matter of this Agreement, the prevailing party shall be entitled to recover reasonable attorney fees incurred in preparation or in prosecution or defense of such suit or action as fixed by the trial court, and if any appeal is taken from the decision of the trial court, reasonable attorney fees as fixed by the appellate court.

10. Amendments. This Agreement may be amended only by an instrument in writing executed by all the parties.

11. Entire Agreement. This Agreement (including the exhibits) sets forth the entire understanding of the parties with respect to the subject matter of this Agreement and supersedes any and all prior understandings and agreements, whether written or oral, between the parties with respect to such subject matter.

12. Counterparts. This Agreement may be executed by the parties in separate counterparts, each of which when executed and delivered shall be an original, but all of which together shall constitute one and the same instrument.

13. Waiver. A provision of this Agreement may be waived only by a written instrument executed by the party waiving compliance. No waiver of any provision of this Agreement shall constitute a waiver of any other provision, whether or not similar, nor shall any waiver constitute a continuing waiver. Failure to enforce any provision of this Agreement shall not operate as a waiver of such provision or any other provision.

14. Further Assurances. From time to time, each of the parties shall execute, acknowledge, and deliver any instruments or documents necessary to carry out the purposes of this Agreement.

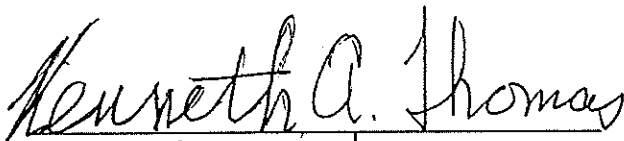

15. Time of Essence. Time is of the essence for each and every provision of this Agreement.

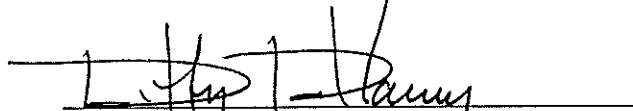

16. No Third-Party Beneficiaries. Nothing in this Agreement, express or implied, is intended to confer on any person, other than the parties to this Agreement, any right or remedy of any nature whatsoever.

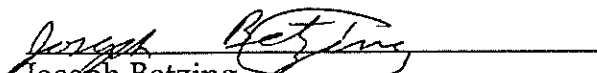

17. Exhibits. The exhibits referenced in this Agreement are a part of this Agreement as if fully set forth in this Agreement.

18. Governing Law. This Agreement shall be governed by and construed in accordance with the laws of the state of Oregon.

Dated: 1/5/00

## TRANSITION LANDS STUDY AREA GROUND WATER EVALUATION WASCO COUNTY, OREGON

Gay M. Jervy

### SUMMARY

The evaluation of ground water quantity is important to residents of the Transition Lands Study Area (TLSA). Assessment of the volume available has been difficult because of one major problem; regardless of the method of assessment used or the assumptions made in estimating available ground water, none of the ground water models used to date explain the declines seen in some wells in the TLSA or the fact that some wells have had to be deepened due to lack of water in the wellbore.

The purpose of this report is to examine this one issue in detail using available information. The conclusions presented are:

- all of the aquifers in the TLSA are water table aquifers or hydraulically tied to water table aquifers
- these aquifers can be identified and mapped
- there is no obvious overall trend of aquifer depletion in the TLSA
- declines observed occur primarily in basalt aquifer wells and appear to be linked to the internal structure of the basalts
- deepening (where related to lowering of static water level) are due to specific negative situations having to do with the geology adjacent to the wellbore
- more work needs to be done to better understand basalt aquifer performance
- close observation of wells in densely drilled areas is necessary to improve estimation of appropriate well spacing

- well spacing should not exceed what has been demonstrated to be effective within the TLSA unless additional information is provided to the Wasco County TLSA Steering Committee or other County representatives

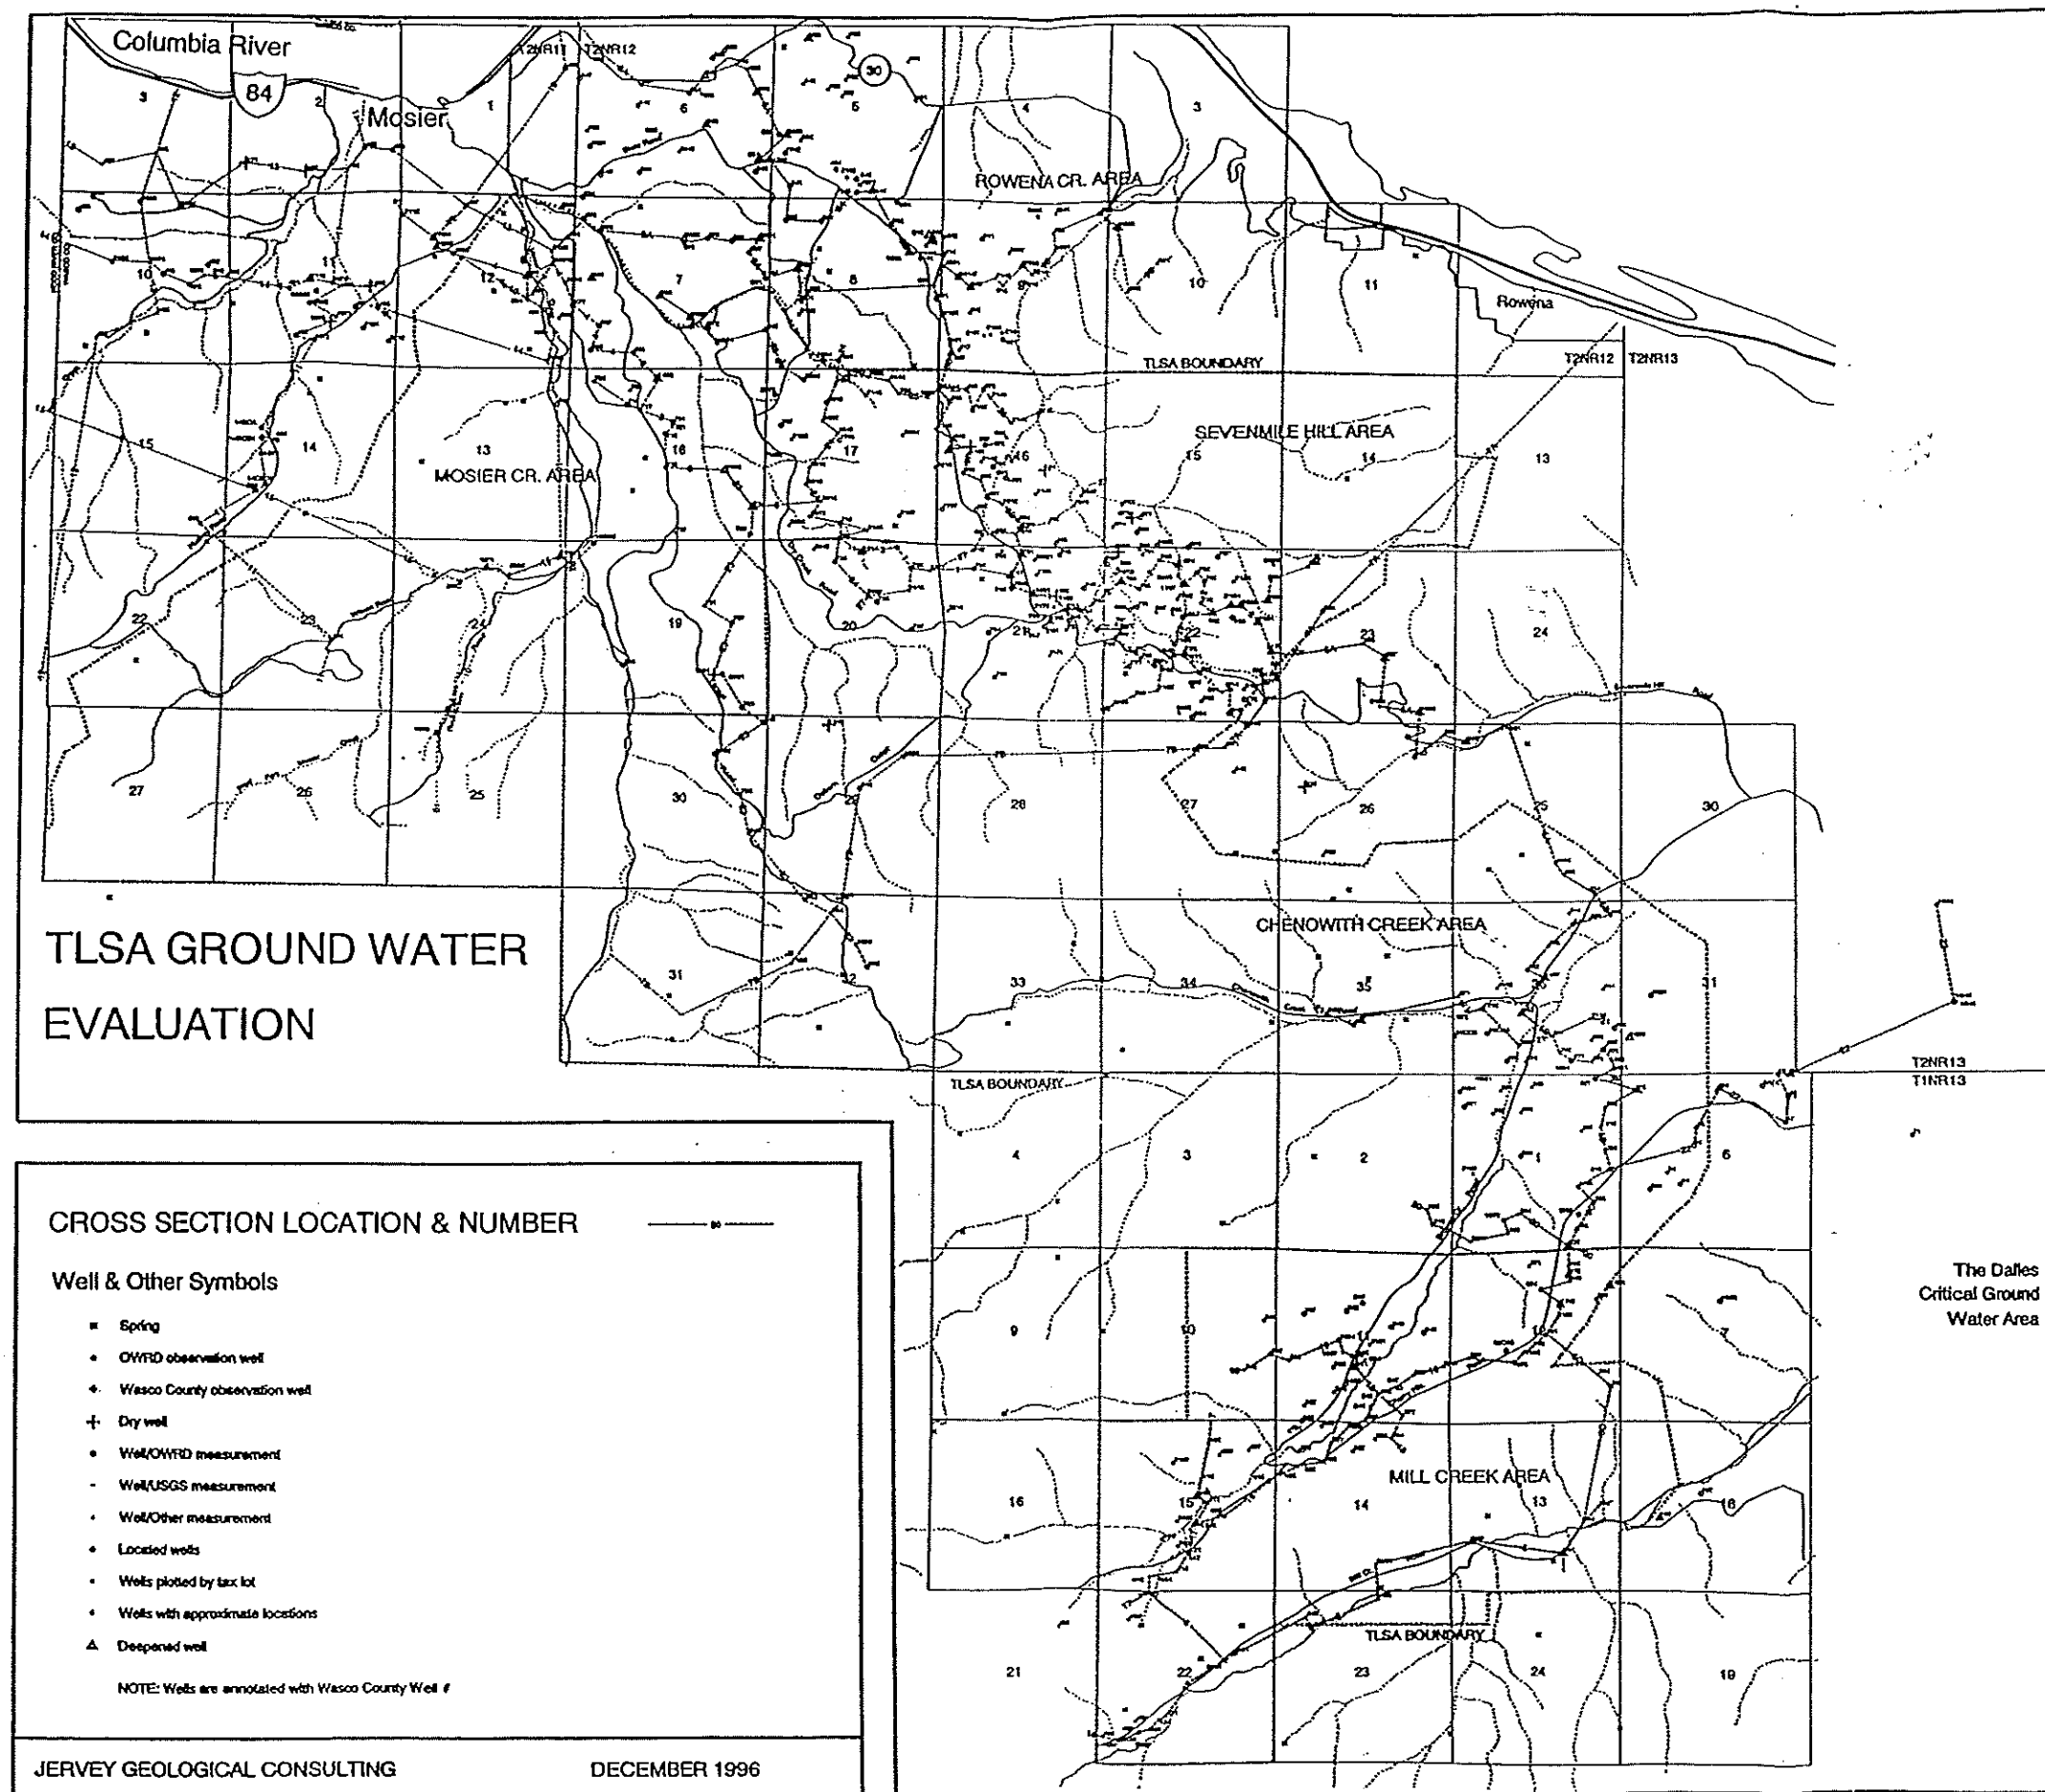

### INTRODUCTION

The main questions which must be addressed in order to better understand aquifer behavior and availability of ground water in the TLSA are:

- 1) How much ground water is available to the individual land owner?
- 2) Why do some wells have to be deepened?
- 3) Why do some wells show water level declines?
- 4) How close together can wells be and still operate properly (without undue interference)?

In order to address these questions, a detailed study of water wells in the TLSA was conducted. Records for a total of about 817 wells in and adjacent to the TLSA were included in this review. It is estimated that there are an additional 40 to 60 wells within this area that have no well records and were not included. The lack of this information is probably not critical to this review, since it is a small proportion of the data set which has been examined.

An initial and ongoing problem is the uncertain geographic location of a number of the water wells within the TLSA. Work done by the Wasco County Watermaster has contributed a great deal toward

locating existing wells. Of the well records mentioned above, 592 wells were located and are shown on the map on the preceding page (a large version of this map with topography added is also available). Almost all of the wells inside the TLSA area were located, at least approximately (by tax lot). Most of the 225 unlocated wells lie outside the TLSA boundary, mainly in the Rowena and west The Dalles areas. Within and immediately adjacent to the TLSA, 58 deepened wells were identified and studied in detail. The data collected for the wells in this review is in Table A at the end of this report (Appendix A). Included in this table are multiple measures of static water levels made in certain wells. Multiple static water level measures are also included in Tables A1, D and E (Appendix A).

Sources of information for this report are primarily the extensive previous studies done in this area and referenced at the end of this report (Lite and Grondin, 1988, and Kienle, 1995). Important additional information was contributed by the people listed in acknowledgment at the end of this report who work or reside in Wasco County or have a general or specific interest in the topic covered. However, errors in data or interpretation present in this report text are entirely the responsibility of the author.

The data and interpretations in this report are provided as a service by Jervey Geological Consulting in response to questions raised by the TLSA Steering Committee. Jervey Geological Consulting is primarily involved in oil and gas exploration and has no special qualifications in the evaluation of ground water resources. Therefore, this document should be primarily used as a basis for evaluating the data and observations it records. It is not specifically designed to be used in formulating public policy. The material collected here may also be helpful for use in future studies by qualified hydrogeologists.

#### GROUND WATER AVAILABILITY

An estimate of available recharge volume is necessary to evaluate how many wells per unit area an aquifer can support. For the most part, the aquifer systems in the TLSA are recharged by precipitation (diffuse) and intermittent runoff in valleys. The lowest aquifer systems, are also probably recharged and maintained by perennial streams (Mill Creek, Chenowith Creek, and Mosier Creek).

A key factor in recharge to the TLSA area is its precipitation pattern. The area lies in an intermediate position between humid and arid climates. The cycles of heavy and low precipitation that occur over many years reflect this intermediate position. Because of this, a range of recharge volumes should be calculated that

reflect both normal (or average) conditions and low precipitation conditions over specific time intervals.

The graph in Figure 1 shows precipitation volumes in Hood River and The Dalles. The longest dry cycle in recorded history is the period from 1922 to 1944 (23 years) overlapping the occurrence of The Great Dust Bowl in the central United States. The average precipitation in Hood River during this period was 26 inches (84% of normal values). On the average, rainfall in The Dalles is about 48% of the amount recorded in Hood River.

Figure 2 is derived from Oregon Water Resources Department Ground Water Report #33 on the Mosier area (Lite and Grondin, 1988) showing the most probable change in precipitation levels across the TLSA. The western boundary, closer to Hood River, probably receives over 25 inches per year; the eastern boundary near The Dalles, about 15 inches.

A recent report on the Columbia Plateau aquifer system issued by the U.S.G.S. (Whiteman, et al, 1994) includes part of the TLSA on the extreme southwestern margin of the report area. The estimate for recharge for the TLSA from this report would be 2 to 15 inches per year, depending on total precipitation. In effect, the lower the rainfall, the smaller the percentage of water that is available for recharge. Using an average of 20 inches of precipitation per year, an example estimate of recharge can now be calculated. At this level of precipitation, the proportion returned as recharge is around 30% (values presented in the Whiteman report are 6.82" of recharge for 21.06" of precipitation in a temperate climate). Under dry conditions over several years, this percentage probably drops to about 26%. The overall calculation for recharge in this example is shown in Table 1 (page 5).

The estimates used were drawn from several sources; but primarily from U.S.G.S. Professional Paper 1413-B on the Columbia Plateau Aquifer System (Whiteman, et al, 1994).

#### DOMESTIC WELL USAGE

Water usage per average household has been estimated by several authors working in this general area:

- Lite and Grondin (1988)  
288,350 gallons/year
- Kienle (1995)  
191,760 gallons/year
- OWRD information pamphlet for well owners  
(1993) average of values cited:  
217,500 gallons/year
- Local utilities, Chenowith and The Dalles:  
90,000 to 350,000 gallons per year

Figure 1. Precipitation for Hood River and The Dalles, Oregon, five year running averages.

Figure 2. Average annual precipitation, TLSA (from Lite and Grondin, 1988).

Table 1. Examples of recharge and discharge calculations using different assumptions.

It is evident that there is a range of usage, but on the average over a large group, a figure of 100,000 to 300,000 gallons per year is probably a reasonable range.

Of the ground water used, a percentage of household waste water and lawn irrigation is returned as recharge. Designs for most domestic systems (in houses) assume an average volume of around 200 gallons per day per household (73,000 gallons per year) is produced as waste water. In addition, a small percentage of the water used in the lawn and garden will return as recharge to the aquifer.

The amount returned is extremely difficult to estimate, because it depends on precipitation levels, time of year, type of waste water, and the amount of water usage of the household. Under favorable conditions of rainfall, water use, soil type and other factors, 50% or more of water extracted from an aquifer may return as recharge (Stephens, 1996). However, because there is no data in the TLSA area that can support an estimate of this magnitude, it is better at this time to simply use the same percent of recharge that was used in the estimate of natural recharge.

The calculations for usage can be compared with average recharge to yield an approximation of well densities (Table 1) which could perhaps be supported by the aquifers in the TLSA. In addition to these figures the estimates made for minimum to maximum elevations in the NGS, Inc. TLSA study (Kienle, 1995) are provided for comparison. There is a range of volumes presented; neither case can be definitively proven at this point in time.

There is a problem that appears at once; even at far lesser well density than the most conservative figures in Table 1, TLSA domestic wells show declines and some have to be deepened. This observation will have to be addressed before any ground water model can be considered acceptable.

Even with very conservative estimates for recharge such as those used in the NGS, Inc. study of the TLSA (Kienle, 1995), there is no indication that current levels of usage have exceeded recharge. The reason that a number of sections appeared to be in an overdraft situation was due to the maximum permitted water usage used in the model calculations (about 816,790 gallons per acre per year for sections with water right acres). This is far in excess of what has been documented as actual irrigation usage (Lite and Grondin, 1988, and Whiteman et al, 1994). The actual use of ground water in irrigation is summarized in the next discussion.

## IRRIGATION USAGE

The same procedure used for domestic wells can be used when assessing irrigation usage versus recharge. Previous reports (Lite and Grondin, 1988 and Kienle, 1995) estimated actual irrigation use at about 1.1 to 1.5 acre feet per acre of orchard per year, or about 488,000 gallons per acre per year. This was based on an estimate of 36" of water required per year by orchard crops, 18" of which was supplied by rainfall in the orchard area around Mosier. The calculations shown in Table 1 assume that if the average rainfall is 20", average usage for irrigation would be around 16" of water per acre. The following calculations assume that the majority of ground water available for irrigation is replaced by diffuse recharge. It is likely that additional recharge by local sources such as perennial streams is available to the lowest aquifers in the TLSA. It is also important to note that a substantial fraction of irrigation (20-50%) is from surface water sources.

To reiterate; the central issue that needs to be examined is that of the declines and well deepening observed in wells throughout the TLSA. A corollary observation that must also be addressed is that other wells do not seem to show the effects of decline.

At this point, it is necessary to briefly describe aquifer types and their characteristics. Once this information is presented, an assessment of the assumptions concerning recharge and discharge can be made.

## GENERAL GEOLOGY - AQUIFERS

The descriptions in this part of the report are drawn from a variety of sources, primarily Lite and Grondin, 1988, Kienle, 1995 and others which are listed at the end of the report text and from field work in parts of the study area. There are some indications that differences between basalt aquifers and sedimentary (sandstone and conglomerate) aquifers give rise to differences in water well performance. It is critical to examine the two aquifer types before looking at individual aquifer systems. In addition, there are some important differences among basalt aquifers which need to be introduced at this time. This discussion will be limited to the description of characteristics which affect aquifer behavior. Figure 3 is a columnar description of the sequence of various rock types found in the TLSA and contains brief descriptions of aquifer qualities.

## BASALT AQUIFERS

Figure 4 is from the U.S.G.S. Columbia Plateau report previously cited (Whiteman, et al, 1994). It shows the internal structures in typical basalt flows and some of the physical characteristics, such as porous volume, which affect their performance as aquifers. In

GENERALIZED STRATIGRAPHIC SECTION

TLSA, WASCO COUNTY, OREGON

Figure 3. Generalized stratigraphic section, TLSA, Wasco County, Oregon (adapted in part from Keimle, 1995, and Lite and Grondin, 1988).

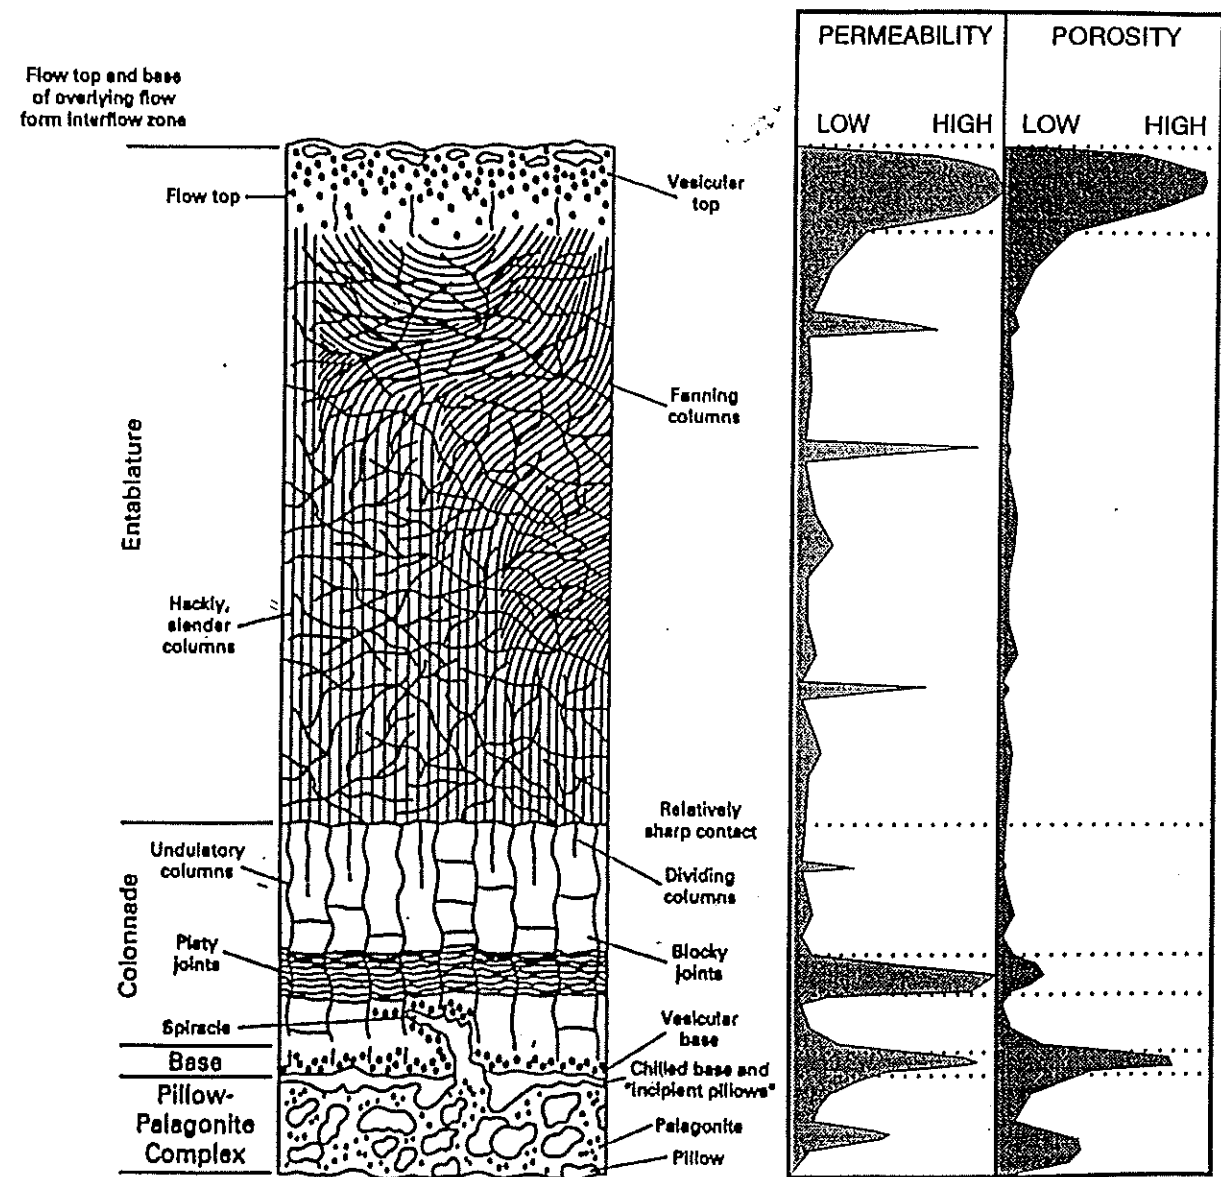

Figure 4. Aquifer quality variation in basalt flow units (diagram on left from Whiteman, et al, 1994).

general, the flow tops and bases, with vesicular (vesicles: openings left by escaping gases when lava cools), and other types of porous volume (breccias: broken rock fragments) can have both high porosity and high permeability. The entablature and colonnade portions of the flows have far less porous volume. Porous volume in these central parts of a lava flow exists mainly in fractures and is very low in comparison with flow tops and bases, in general. The interbeds of basalt flows consist of soils, sands and clays developed on top of flows and the clay-rich pillow palagonite complex formed when the base of the next basalt flow contacts water or moisture bearing soils and sediments.

The curves drawn in Figure 4 show diagrammatically how porous volume and permeability change through the basalt section. None of the section is usually entirely impermeable, but great variations occur from top to bottom of the flows. The best aquifers, which occur in vesicular and/or brecciated flow tops and bases, have internal variations which are also of significance. The porous volume can consist of two types of openings; 1) vesicles and interfragment porosity of breccias, and 2) the porous volume occurring in open fractures connecting them. These two features have very different hydraulic character.

Entablature and colonnade units seem to have very poor lateral (horizontal) permeability, but the fractures in them can have fair vertical permeability. Occasionally, if in the vicinity of a fault or fracture zone, these two basalt types can be completed as aquifers, but their long-term performance is questionable. The interbed sediments may also occasionally act as good aquifers, if they consist of well sorted sands or gravels.

The Pomona, Priest Rapids and Frenchman Springs basalts are the commonly penetrated water bearing units in the central and western parts of the TLSA. The most important differences among them are listed below and shown in Figure 3.

- Pomona (TPO)
  - flow top is often eroded away, vesicular flow base is generally in the order of 5-15 feet thick
  - canyon filling and restricted to lower elevations in the western part of the study area
  - shows an intercalated relationship with Dalles Group sediments at its flow margins
- Priest Rapids (TPR)
  - distinguished by a commonly very thick pillow palagonite (lava erupted into water or water bearing sediment) sequence at its base and well developed vesicular zone
  - in some parts of the report area composed of

two flow units; the interbed between them can be an adequate aquifer

- Frenchman Springs (TFS)
  - At least three submembers occur in area: Ginko (oldest), Sand Hollow and Sentinel Gap
  - frequently exhibits a very continuous, thick vesicular flow top in topographic lows
  - highest yield wells in the TLSA are usually completed in the uppermost part of the Frenchman Springs, combined with the overlying Priest Rapids flow base
- Grande Ronde (TGR)
  - very few wells completed in this unit; oldest and deepest basalt exposed in TLSA wells

#### SEDIMENTARY AQUIFERS

Two sedimentary formations act as aquifers in the report area; the Dalles Group (TDC) and various younger alluvial and flood-deposited sands and gravels, referred to as Quaternary alluvium (QAL) and glacial flood deposits (QGF). Most of the wells in sedimentary rocks are completed in the Dalles Group.

The primary difference between the basalt and sedimentary aquifers is illustrated in Figure 5. The basalts are rigid and brittle: they are easily fractured. The basalt flow tops and bases may contain vesicles or breccias which provide large porous volumes. Together with fractures, this type of rock is a high quality aquifer with high porosity and high permeability. On the other hand, basalt that is fractured but not connected to pore spaces such as vesicles, may have high permeability but very low porous volume. In comparison, sedimentary aquifers tend to be more uniform in porosity and permeability but with lower well yields than the best basalt aquifers.

The Dalles Group consists of several aggrading cycles of braided stream sandstones and gravels and associated floodplain deposits. It also contains ash fall tuffs and abundant tuffaceous material, particularly in the upper third of its thickness. In structure and organization of its rock types, it is very similar to the main producing section in Prudhoe Bay, North Slope, Alaska. Figure 6 shows the vertical sequence in this deposit as an illustration of the environment of deposition similar to that in the lower part of the Dalles Group in the TLSA.

Examination of samples and well records in the Dalles Group also indicates that at the base of the braided stream cycles (Chenoweth Creek-TDC1 and Brown Creek-TDC2A and TDC2B, discussed later in this report), permeability and porosity are often very good and fairly consistent across the aquifers. The highest

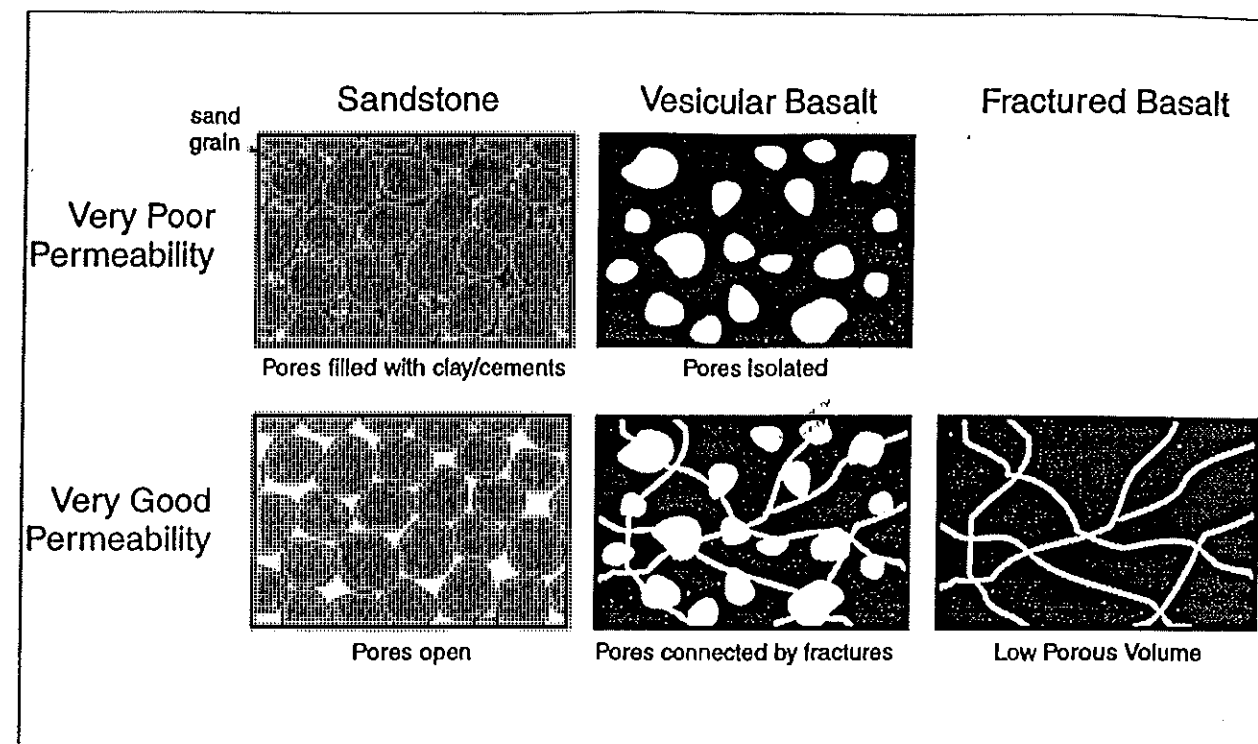

Figure 5. Comparison of basalt and sandstone internal structures, porosity and permeability.

Figure 6. Distribution of rock types, typical deltaic/braided stream association as an analog to Dalles Group aquifers. Diagram is of the Ivishak Sandstone, Prudhoe Bay, North Slope, Alaska (adapted from Atkinson, et al, in Barwis, McPherson and Studlick, 1990).

quality basalt aquifers exceed the Dalles Group aquifers in both yield and volume of water in storage per unit area. However, for domestic well development and possibly for irrigation, the Dalles seems to display very stable aquifer behavior. Most of the subunits mentioned above are exposed in layers in the weathered cliffs adjacent to The Dalles, Oregon and in the southern and western part of the study area.

## TLSA AQUIFER SYSTEMS

The three maps on the following pages show depth to aquifer, depth to static water level and water yield in the TLSA. T2NR12E sections 9, 16 and 19 have some of the deepest wells in the TLSA. The Mill Creek, Chenoweth Creek and Mosier Creek valleys have the most productive wells in the area. The variety seen in these maps can be attributed to the occurrence of water in separate aquifer systems.

A collection of 28 cross sections was constructed to assist in the identification of aquifer systems in the review area. Seven of these sections extend into areas beyond the TLSA. Cross section locations are shown in the location map at the beginning of this report. A selection of the cross sections is used to illustrate points in the remainder of this report.

Formation boundaries were identified using previous studies, surface exposures of the formations and rock types identified in the well records. Aquifer systems were identified using:

- similar rock/formation types,
- similarities in static water level of the aquifers,
- aquifer continuity, and
- similarities in yield, decline and other performance criteria.

When examining the cross sections the following items are of importance:

- Each section is exaggerated vertically; the actual slope of the surface and tilt of the subsurface formations are much more subdued than shown. The sections are exaggerated vertically so that changes from well to well may be more easily seen.
- Patterns on the vertical columns representing a well are based on rock type as described by the driller. A legend describing these patterns is shown in Figure 3 and is also included at the beginning of Appendix B. Speckled patterns are sandstones or conglomerates, generally found in the Dalles Group, alluvial deposits or in interbeds

between basalts. Vertical banded patterns are basalts and horizontal banded patterns are usually clays or interbedded clays and basalts. Hexagonal dotted patterns are vesicular basalts.

- Water producing intervals are indicated with this symbol  next to the well column. The static water levels are shown in blue. For more details as to symbols in the cross sections, please refer to the cross section legend at the beginning of Appendix B. The data presented is not altered materially from the original driller's description.

Cross section 26 is a detail section and differs from most of the other sections in that it has very few wells and more descriptive information. However, it is a good example of the kinds of situations that can be discovered by cross section construction. The section is located immediately west of the western TLSA boundary and has a well belonging to a TLSA Steering Committee member on it (W. Huskey).

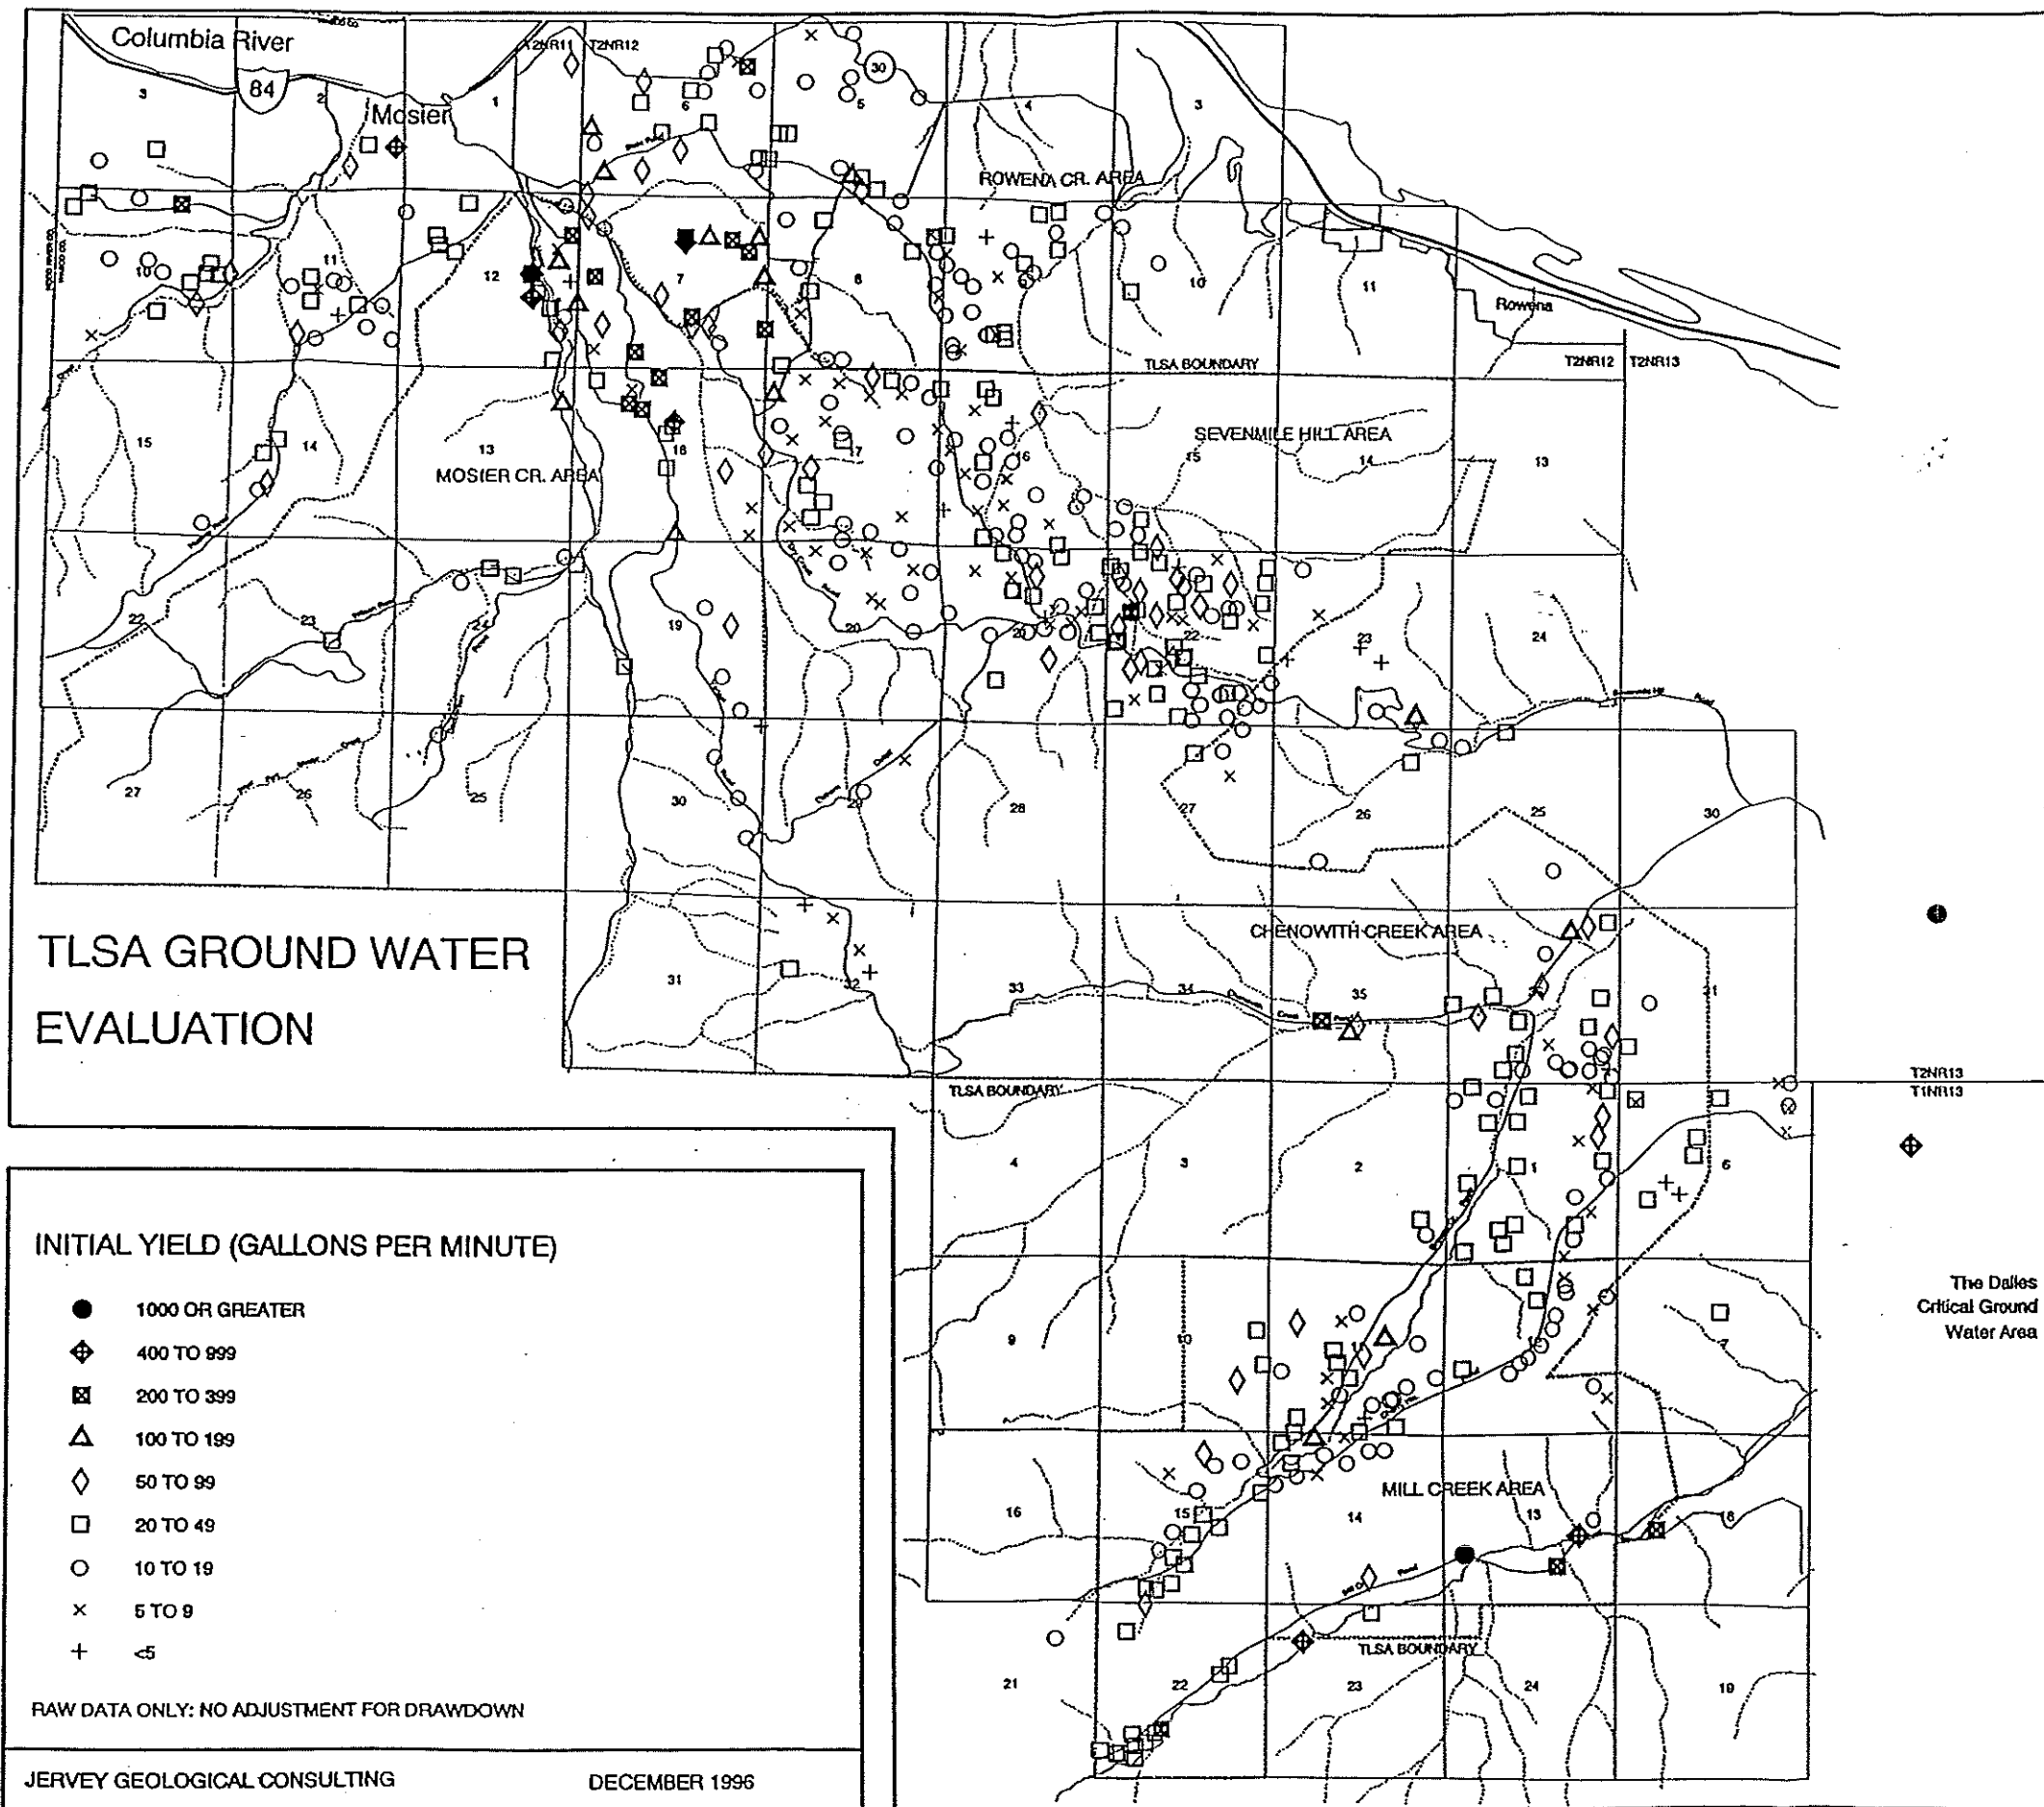

The aquifers on the section are in basalts; the wells penetrate three separate aquifer systems. The systems can be identified by the change in elevation of the static water level and the change in position of the aquifer zone itself. To the south (right) side of the section, a well penetrates the Pomona, Priest Rapids and the top of the Frenchman Springs basalts. It is water productive only in the Frenchman Springs and is distinguished by a high water column and good production characteristics (yield approximately 25 gpm, drawdown unknown). This aquifer is separated from the adjacent well's aquifer by a fault and there is an almost 200' difference in water level between them.

The two central wells are in the same aquifer and are quite similar in other respects as well as static water level. It is interesting to note that the LeSasso well was originally drilled to the Pomona/Priest Rapids interbed in 1976. At some point not long afterwards the well was deepened to the Priest Rapids/Frenchman Springs interbed. At that time there were only three residences in the entire section and no irrigation wells. Two other wells 1.5 miles away in the Rocky Prairie area are similar to this one (deepened from the Pomona before use). The Pomona in this area is well exposed and forms the cliffs surrounding the town of Mosier. It appears to fill and empty at the outcrop on an annual basis. In wells such as the LeSasso well, in January (when the well was drilled) it would appear to be an adequate aquifer; by August it would be effectively drained. In the adjacent Mizeski well, this zone was not water bearing.

The Huskey well, on the far left side of the section, benefits from being immediately adjacent to a canyon flowing into Rock Creek. Static water levels often rise

as such a feature is approached. It also appears to be affected by a local fracture trend which delivers water to the wellbore immediately after a rainfall event. The drawback to being in this position is that the behavior of the static water level can be quite erratic; the well is drained in dry seasons as quickly as it fills during wet cycles and the volume available in summer months may be unreliable.

The information above is somewhat interpretive and other investigators may come to different conclusions about this material. But it is important to do this kind of correlation in order to understand the relation of one well to another and the position and distribution of each aquifer. If pump tests were performed on these wells, a great deal more information would be gained by identifying which wells are in direct communication.

Table 2 is a summary of the aquifer systems in the TLSA area and the map on the page following shows their areal distribution. The system names are based on common geographical names. Most of the abbreviations refer to the main producing formations, except in systems where several formations are productive. As can be seen in this table, each system also has characteristic static water level declines and types of well deepenings (or lack of them).

The aquifer systems described are usually separated from other systems by changes in topography or faults. The position of the static water level within each of them is roughly correlative to the surface elevation at the well.

Figure 7, a plot of static water level versus elevation illustrates the point made above. The aquifer static water level elevations show a very close correlation with surface elevation of the well. Each aquifer system develops a gradient unique to its members, but the overall picture is one of aquifers very closely tied to ground level and existing in specific compartments separated by lateral changes (faults, topography, etc.). This is one reason why use of diffuse recharge is probably appropriate in the calculation of the TLSA water budget. Almost all of the TLSA aquifers are water table aquifers. Even the artesian flowing wells seem to be closely linked hydraulically to surrounding water table aquifers above them.

It is perhaps easier to see the relation between ground level and static water level by quickly reviewing the cross sections in Appendix B. In these sections, the static water levels, where continuous, show a distinct relation to ground surface elevation.

#### STATIC WATER LEVEL (SWL) CHANGES

Table D (Appendix A) contains data from all multiple measures recorded in and adjacent to the TLSA

over the last 40 years. Many measures were made by a U.S.G.S. study in 1979 and by Oregon Water Resources Department in the period 1981-1986. The long term hydrographs for wells within the TLSA are included in Figures 8A-8E of this report.

The values shown in Table D are somewhat subjective in that some consideration of time of year of measurement and length of time between measurements has to be made in order to arrive at an estimate of decline or average annual fluctuation. This may introduce error in the estimates of as much as +/- 10-20 feet. But, in general, the overall trend of decline (or lack of it) and annual variation will probably yield the same picture when the group is considered as a whole.

The most striking feature of this collection is the frequent occurrence of SWL declines in the basalt aquifers. All but two of the 21 hydrograph wells in basalts and about 64% of the multiple measures in basalts show declines from 15 to 307 feet from the initial SWL, with a most frequent range of 30 to 80 feet of decline. The amount of decline often appears to be independent of time of drilling, rate of water extraction or height of the water column. Declines in SWL occur in areas with only a few wells per section, early in the history of ground water development and it occurs in recently drilled wells in densely drilled areas. In contrast, about 36% of measured basalt aquifer wells and almost all Dalles Group aquifers do not show declines greater than might be expected from seasonal fluctuation, even in areas of fairly dense drilling.

A corollary and equally important observation is that most of the basalt wells that show significant declines reach a stable position at some point during the life of the well. The position of stabilization is most commonly 30' to 80' below the original driller's static water level. The hydrographs in Figure 8a through 8e illustrate this observation. (Figures 8a-8e show summary hydrographs; individual hydrographs are available in previous Committee documents or in Kienle, 1995.)

Basalt aquifers do not show large declines if:

- they are extremely shallow (10 to 80 feet deep) and in a catchment position (shallow basin, or in an seasonally active drainage),
- occur immediately below a sandstone such as the Dalles Group or a Quaternary gravel or sand,
- occur immediately below a thick clay unit with overlying basalt aquifer units that are not saturated.

These three situations account for all the basalt aquifers which do not show large initial declines. The collection of observations suggests, but does not

prove, that the initial declines seen in basalt aquifers may somehow be related to their internal structure, the dual porosity found in fractures and vesicles or breccias. The diagram in Figure 4 is an illustration of a possible explanation for the rapid initial declines seen in some basalt aquifers. If the zone of saturation below the vadose zone (the transition from no saturation to 100% saturation) occurs in the entablature or colonnade parts of a basalt, the actual volume of water contained in the highest part of an aquifer may be very small. This part of the basalt may have very little horizontal connection with the rest of the aquifer. As the well is produced, decline in this section of the basalt may only recover under conditions of very high recharge. Each time the well is produced the water level will drop slightly and not recover until a point is reached that can be supported by the high volume porous part of the basalt aquifer. The fact that large declines are not seen in basalts that are overlain by Dalles Group or alluvium suggests that this explanation may be valid for some basalt aquifers, particularly those at higher elevations.

An alternative or possibly contributing explanation is in the normal response of fractured reservoirs to fluid withdrawal. The shape of the pressure sink around a well in a fractured rock is often one that shows a rapid but small drop of very large radius, and afterwards very little change in static water level while pumping. Figure 9 is a display of the data on two basalt aquifer tests presented in the Lite and Grondin 1988 report. The recovery curve is roughly an inverted mirror image of the decline during pumping. The shape of the build up curve, shown in Figure 10, indicates that recovery to original static water level may take much longer than the pumping time interval.

The decline in SWL may not be easily detectable after any one pumping period, but during seasons of heavy use, each time the well is pumped, the static water level will fail to rise back to its original position. Over a year the discrepancy may be large (10-20 feet) and unless the well is shut in for a long time, this process will continue until the fracture system pressure drops and equilibrates with the matrix (pore volume) pressure. At this point the well will maintain a reasonably constant static water level, if the volume extracted per unit time remains constant. Figure 10 shows a different type of plot with a logarithmic scale which allows for analysis of aquifer character. The change in slope seen in the Pomona test may be the pressure decline encountering a barrier or it could be the transition period before the fracture system reaches equilibrium with the porous matrix.

The hypotheses above are not necessarily correct. It may simply be that the basalt aquifers have poor

storage volume and/or access to recharge and consequently are declining and will fail in the near future. However, there are a few indications that this is not the case. These include:

- the observation that many hydrographs show static water level decline to a specific level, followed by stabilization,
- the continued drilling of new wells which appear to encounter original or near original aquifer pressures (suggesting that SWL declines are tied to individual wellbores), and
- the overall stability of static water levels in each aquifer system over the past 40 years

Each of these points will be illustrated with a specific example.

Figures 8a-8e contained all hydrograph curves in and adjacent to the TLSA. The Mill Creek, Dalles Critical Ground Water area, and Sevenmile Hill curves have declined to specific positions and are not, in general, showing rapid decline at this time. A few of the Mosier Creek wells have reached such an equilibrium position; the rest of them have not been measured for a number of years and cannot be assessed. The Chenoweth Creek and Root Road hydrographs are not indicative of a rapidly declining systems.

Almost every cross section in Appendix B that displays basalt aquifers shows at least one example of new wells being drilled adjacent to older wells with higher SWL than the older wells which have demonstrated declines. Figure 11 shows 3 wells in T12NR12E Section 7, Mosier Creek System. The oldest well (#569/573 Root) has developed a cone of depression that makes its static water level lower than the other two, younger wells. The difference between the SWL in the Root well and the Reeves well is around 50 feet. Many of the cross sections show examples of this situation. In these sections, an older well is displayed adjacent to a well drilled long afterward. In many cases, even though the wells are not separated by great distances, the newest well shows a higher static water level than the current SWL of the older well. This suggests that declines are directly the result of producing the well and are not perhaps representative of the state of the aquifer as a whole.

Figures 12 and 13 are displays of the static water levels in the TLSA aquifer systems versus time. The thin lines connecting points are multiple water level measurements in single wells. It is apparent that many of the basalt aquifer systems have wells which show declines. However, the trend of initial static water levels in all of the TLSA aquifer systems has not shown any correlation with time. In other words, there is no

significant increase or decline in any of these systems (this also implies that no appreciable co-mingling is occurring between systems). A minor exception to this summary is the Sevenmile Hill TFS2B aquifer. This aquifer is very shallow, of limited extent and three out of four wells in it were deepened to the Sevenmile TFS2 system.

Another significant observation is that in a few wells, recovery to original static water levels has occurred in basalt aquifers with large initial declines. It is notable that only in particular cases does the high rate of initial decline continue, resulting in aquifer failure. Most of the wells showing large declines continue to provide water in a satisfactory manner. The specific reasons for aquifer failure will be discussed in the next section.

In order to assess the previously mentioned observations, it would be useful to look in detail at how the static water level reacts to production and/or rainfall volumes in a well where there is a fairly complete set of data. The Chenoweth Co-op Wells #1, 2 and 3 provide about 300,000,000 gallons of water per year to customers. Most of the production is from Well #3, which is near The Dalles Racquet Club. Wells #1 and 2 are twins (drilled side by side) and are located a few city blocks from Well #3. The wells are completed in the Priest Rapids/Frenchman Springs basalts and are shown on Cross Section 22. They are very similar to the irrigation wells in Mill Creek (Cross Section 6), excepting that the water column in the Chenoweth wells is much smaller. The Chenoweth wells are part of the Dalles Critical Ground Water system.

The curves in Figure 14 cover a long time period during which production of water from these wells rose from about 200 million gallons per year to 300 million gallons per year. The first 13 years of production saw a rapid decline of about 50 feet in static water level. Over the next 30 years, static water level seemed to reflect the level of production rather than to decline. In 1975, production was estimated at about 250 million gallons/year. In 1994, production had risen to almost 300 million gallons/year and the stabilized water level dropped, but did not decline appreciably after the initial drop. A point of interest; the bulge in the static water level curve beginning in 1987 does not correlate with rainfall volume during or immediately before that time period.

A more detailed examination of well data is shown in Figure 15. The curves for water level, rainfall and production all seem to have a relationship (although due to time lag, it cannot be quantified easily). The peaks of rainfall, water level and the lowest production volume seem to occur at about the same time. Whether the responses on the water level curve are

due to rainfall or production recovery is difficult to say. It may be that both factors affect the water level in this well. It is notable that some of the recovery curves begin before the beginning of increased rainfall. This may mean that the shut in or low production period allows the water level to recover and that this water level increase may be primarily a build up rather than a response to new injection of water volumes after rainfall.

Another example of the water level response to water production volume in basalt aquifers occurs in a very different type of well; the domestic well #492 in Cross Section 26 shown previously in this report. This well had an original static water level of 186'. It was drilled in 1981 and only used intermittently for many years. For most of its early history, there were only a few wells in the section, all of which were domestic wells. In 1995, the next static water level measured was 201'. For most of that year, the water level stayed within one foot of that measure. At that point only one household was using the well on a full time basis. In late 1995, another household was added to the well system. The water level immediately dropped to 204'. Subsequent measures throughout 1996 remained very constant at or near that value.

The point of this discussion is that the specific stable static water level for a particular well may depend entirely on the volume extracted per unit time. If the volume produced is increased, the water will drop to a new equilibrium position. If the production volume is reduced, the water level will show an immediate return to a higher position. The amount of water that can be extracted depends on the porosity and permeability of the specific aquifer and the rocks above it. If the production volume exceeds the capacity of the well, the aquifer will fail in the vicinity of the wellbore, but a shut in period will allow it to recover.

#### DEEPENED WELLS

Wells which are deepened occur throughout the TLSA, but are most numerous in several areas. The common reasons that a well is deepened are

- land owner wishes to access a larger supply of water,
- the shallowest aquifer present shows a reduction in rate and static water level to the point where deepening the well is required to maintain water in the wellbore, or
- collapse and/or caving of the wellbore damages its ability to provide water

The second reason above has the most interest in the evaluation of ground water supply in the TLSA. A

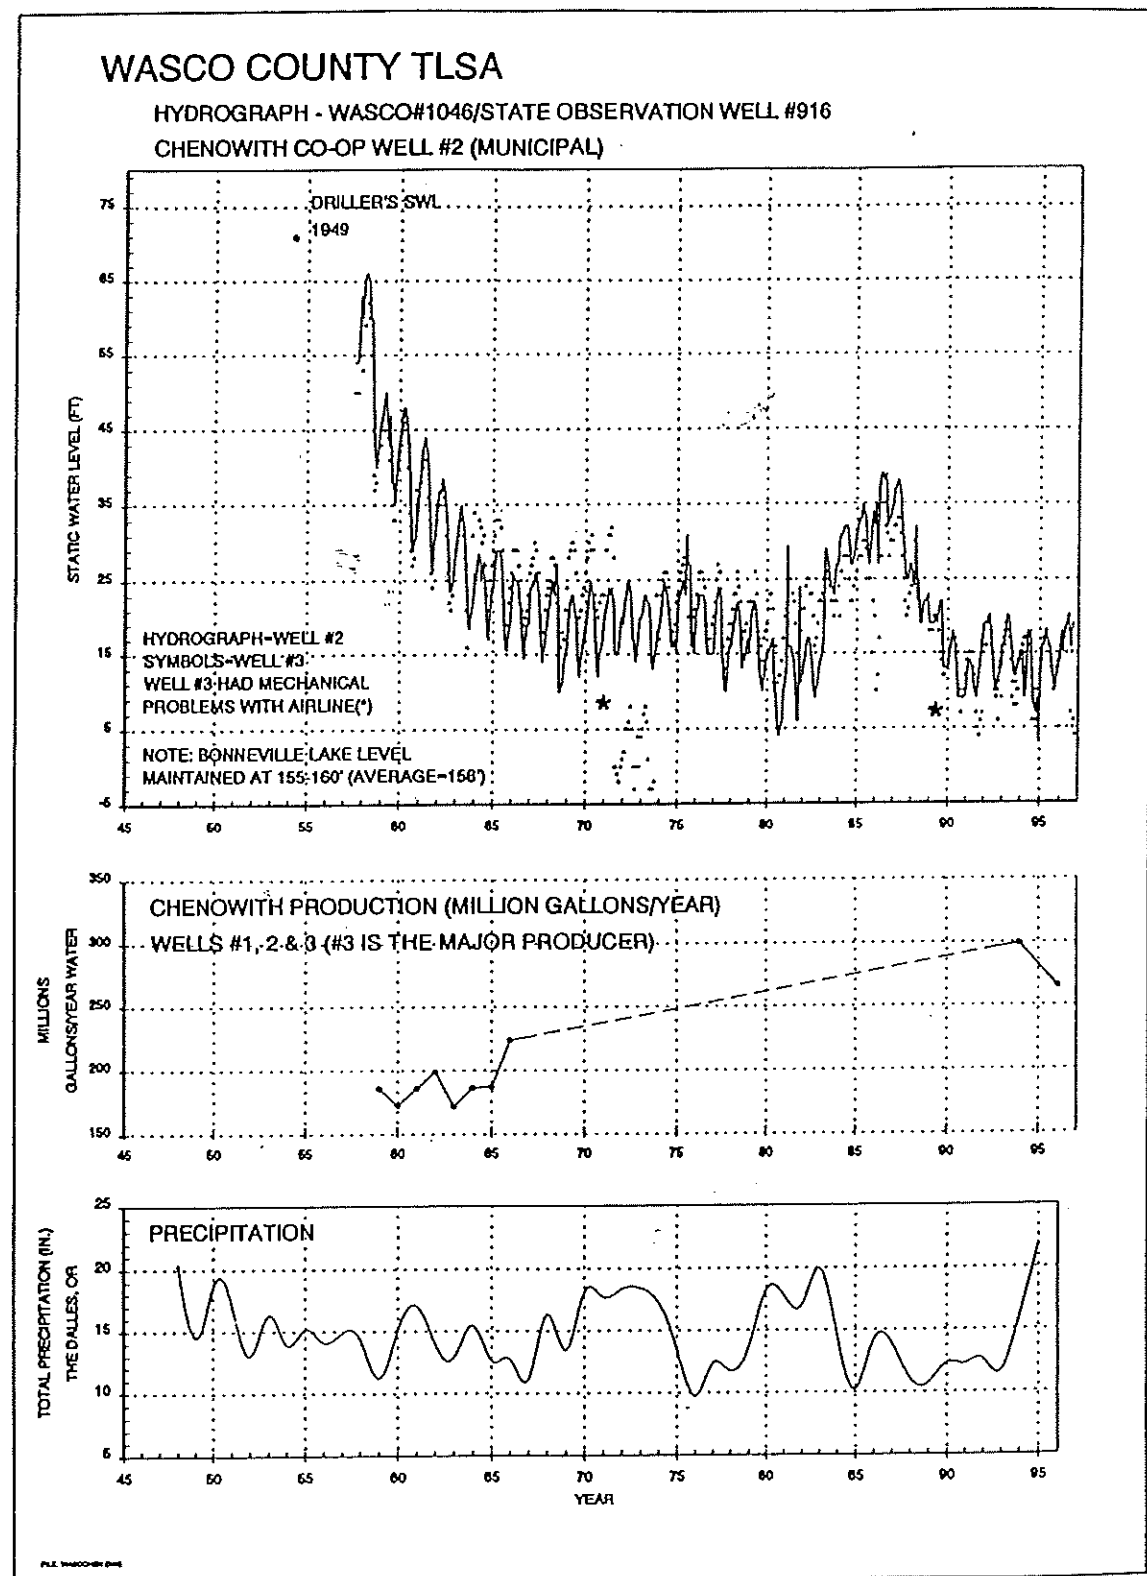

Figure 14. Chenowith Co-op water well data, 1949-1996.

Figure 15. Monthly detail, Chenoweth Co-op water well data, 1992-1996.

similar interest pertains in wells that have had multiple static water level measures over time and show significant decline in static water level (>30').

From the previous discussion on basalt aquifer initial decline, it is apparent that in many basalt wells enough water column must be available to accommodate the initial decline that many of them will experience. In many instances of deepened wells, the original well did not penetrate enough aquifer thickness to support water production over time. In these wells, deepening is required to more fully expose the aquifer system to the wellbore. In other instances, the entire system is abandoned and the well is deepened to a new aquifer system. It is now necessary to review available data and summarize how many wells of each type exist and the aquifers in which they tend to occur.

The 58 deepened wells examined may be categorized as follows:

- Minor (22 wells): 3 to 50 foot increase in well depth
  - repairs damage through caving or extended use
  - very little to no new aquifer thickness is exposed
  - static water level does not change
  - may be considered well rejuvenation
- Moderate (17 wells): 20 to 250 foot increase in well depth
  - repairs damage due to partial penetration
  - exposes more central part of aquifer system
  - static water level change is minor and remains within the same aquifer system
- Major (19 wells): 200 to 600 foot increase (or more) in well depth
  - abandonment of original aquifer system
  - static water level is 100 to 400 feet lower than in original well
  - represents a significant failure of shallowest aquifer system.

The deepened wells are listed in Table E ( Appendix A). Minor and moderate deepenings may be regarded as fairly normal occurrences in the development of a ground water resource. They are only of concern when the overall rate or percentage of them sharply increases over a particular time period. This may signal the stressing of the shallow ground water systems.

As is shown in Figure 16, deepenings in the TLSA area have occurred at a fairly constant percent of total wells drilled through the history of water well development. It should be noted that wells drilled during high rainfall cycles may have a tendency to be deepened more than wells drilled during normal or dry cycles.

Major deepenings are of serious concern. If no other explanation for them is identified, they signal failure of the shallow aquifer and depletion of the ground water resource. However, in the case of most of the major deepenings within the TLSA area, an explanation for failure can be demonstrated.

The following conditions may cause failure of the shallow aquifer. Each of them is illustrated by a cross section in Appendix B showing the condition described:

#### 1) POOR PERMEABILITY AND/OR POROSITY IN THE VICINITY OF THE WELLBORE

Aquifers are not uniform throughout their occurrence. For a variety of reasons, internal variation within them is normal and can be expected. In some areas, poor performance of an individual aquifer can be identified and mapped. A good example of this occurs in the northern part of the ridge between Mill Creek and Brown Creek and is shown in the northern end of Cross Section 5B. The Brown Creek-TDC2B aquifer (Dalles Group) is a frequently completed unit in this area. However, northeast of T1NR12E Section 11, it gains in clay content (clay lenses) to the point that in some cases, wells were not even completed in this zone, but were drilled deeper to the TDC1 aquifer. Other wells completed in this the TDC2B were later deepened, probably because of insufficient water volume. The TDC2B in this area also has the problems mentioned in #2 and #3 below.

#### 2) DESTRUCTION OF ORIGINAL AQUIFER CONDITIONS BY FRACTURING OR FAULTING

Faults and fractures can be very detrimental to aquifer performance in the following ways:

- Plugging of porous rock by deposits of minerals resulting in low porosity and permeability and poor interconnection with the main body of the aquifer.
- In contrast, fracturing may be seen as an enhancement to aquifer permeability in fault/fracture zones which are not mineralized. However, if it is extreme and continues to an adjacent canyon, fracturing can act as a drain, enhancing permeability to the point where the rock is no longer able to maintain high water volume.

Figure 16. Wells drilled and well deepenings versus time, TLSA, Wasco County.

The detrimental effect of fault/fracture zones can be seen in Cross Section 2 in the Sevenmile Hill area. Two wells in this section are abandoned after encountering no water. The driller's description in both wells indicates that mineralization has destroyed original aquifer quality by allowing mineral-bearing fluids to deposit material in available fractures and pore space. Away from the fault zones, the basalt aquifers here are quite acceptable in terms of rate and productive capability.

A rather serious condition occurs in T2NR12E Section 9 shown in Cross Section 9B. In this area, two major fault zones cross, one going east-west, the other trending northwest-southeast. Some wells in the vicinity of this intersection are either very deep originally, or have to be deepened to depths greater than 550 feet. The map on the following page shows trends of wells with drilling problems such as caving, fractures or lost circulation, dry holes, deepened wells and wells with very large declines (>100 feet) and the pattern of major fault and fracture zones identified on surface or in cross section. Figures 17, 18 and 19 are aerial photographs which show some of the features mapped as fault or fracture zones. The Wasco County Planning Office has complete aerial photo coverage in the TLSA for those who have an interest in this topic.

The presence of a fault or fracture zone is shown on the report cross sections as a vertical line. The faults in this general area are high-angle reverse, lateral or normal faults. If actual displacement is seen in cross section or in outcrop, the formations on either side of the fault line will be offset on the cross sections. A quick review of any selection of the cross sections will show how faults or fractures can depress static water levels in their vicinity.

### 3) WELL IS LOCATED TOO CLOSE TO THE MARGIN OF AN AQUIFER SYSTEM

In cross section 5B discussed previously, the TDC2B aquifer was becoming very shallow and close to its exposure at surface on adjacent slopes. Cross section 3 shows the Upper Dry Creek aquifer system (PRDC1) as it approaches its exposure on the slopes of Dry Creek valley. This aquifer system occurs in basalts immediately below the Dalles Group or in the base of the Dalles Group itself. Wells #726/714 and 713/715/2068 are on the margin of the system and their initial water columns are intermediate between the Root Road and Mosier Creek systems. These wells were deepened in 1986 and 1992, respectively, to the Mosier Creek system (elevation about 350-400 feet). If a well is drilled in a marginal position, it receives recharge from perhaps only about half the area of a

normal aquifer. In addition, diffuse recharge on slopes is probably less than diffuse recharge in flatter areas.

In all of the instances of major deepening, one or more of these conditions existed. The detrimental features described above all reduce the ability of an aquifer to gain recharge from the area surrounding it. In essence, these wells are deepened because they were produced at rates that exceeded their capacity to supply water. The aquifer conditions in each of them would not support water production at even low rates for an extended period of time.

Other conditions which may cause water level decline and lead to deepening are:

- Partial penetration of the upper part of an aquifer system. The Root well in Figure 11 is possibly affected by this condition.
- Damage caused by bacteria and/or deposition of fine sediment, both of which occlude porosity and permeability.
- The presence of ductile clays (often adjacent to basalt aquifers which can deform plastically over time. The result is an eventual "choking off" of the aquifer interval.
- Wells may also be affected by composite cones of depression, but this subject will be covered in the section below on well spacing.

In Figure 20 three unrelated wells are shown to illustrate an important problem. The Wilds well (T2NR12E Section 21) at the left, was deepened twice and now is at a depth of 799 feet. The two upper aquifers which have been subsequently abandoned were evidently of low quality. The 1995 measurement of static water level (NGS, Inc.) may be only apparent because the well measure also reported cascading water. What is certain is; the two upper zones could not support domestic requirements. This well is on trend with two dry holes, #753 and #4103, near one of the fault zones shown in the drilling hazard map. The third aquifer at the base of the well appears to be of higher quality than the other two. Other wells in the vicinity, including Wasco County Observation Well #743, appear to be stable and are about one half the depth of this well.

Also displayed in Figure 20 are two other wells in T2NR12E (Sections 16 and 9) which are abnormally deep for the area, and have abnormally low static water level elevations. It is this type of well which requires the most future investigation. There are many questions about such wells to be answered:

- Does the great depth to static water level reflect a restricted access to diffuse recharge?

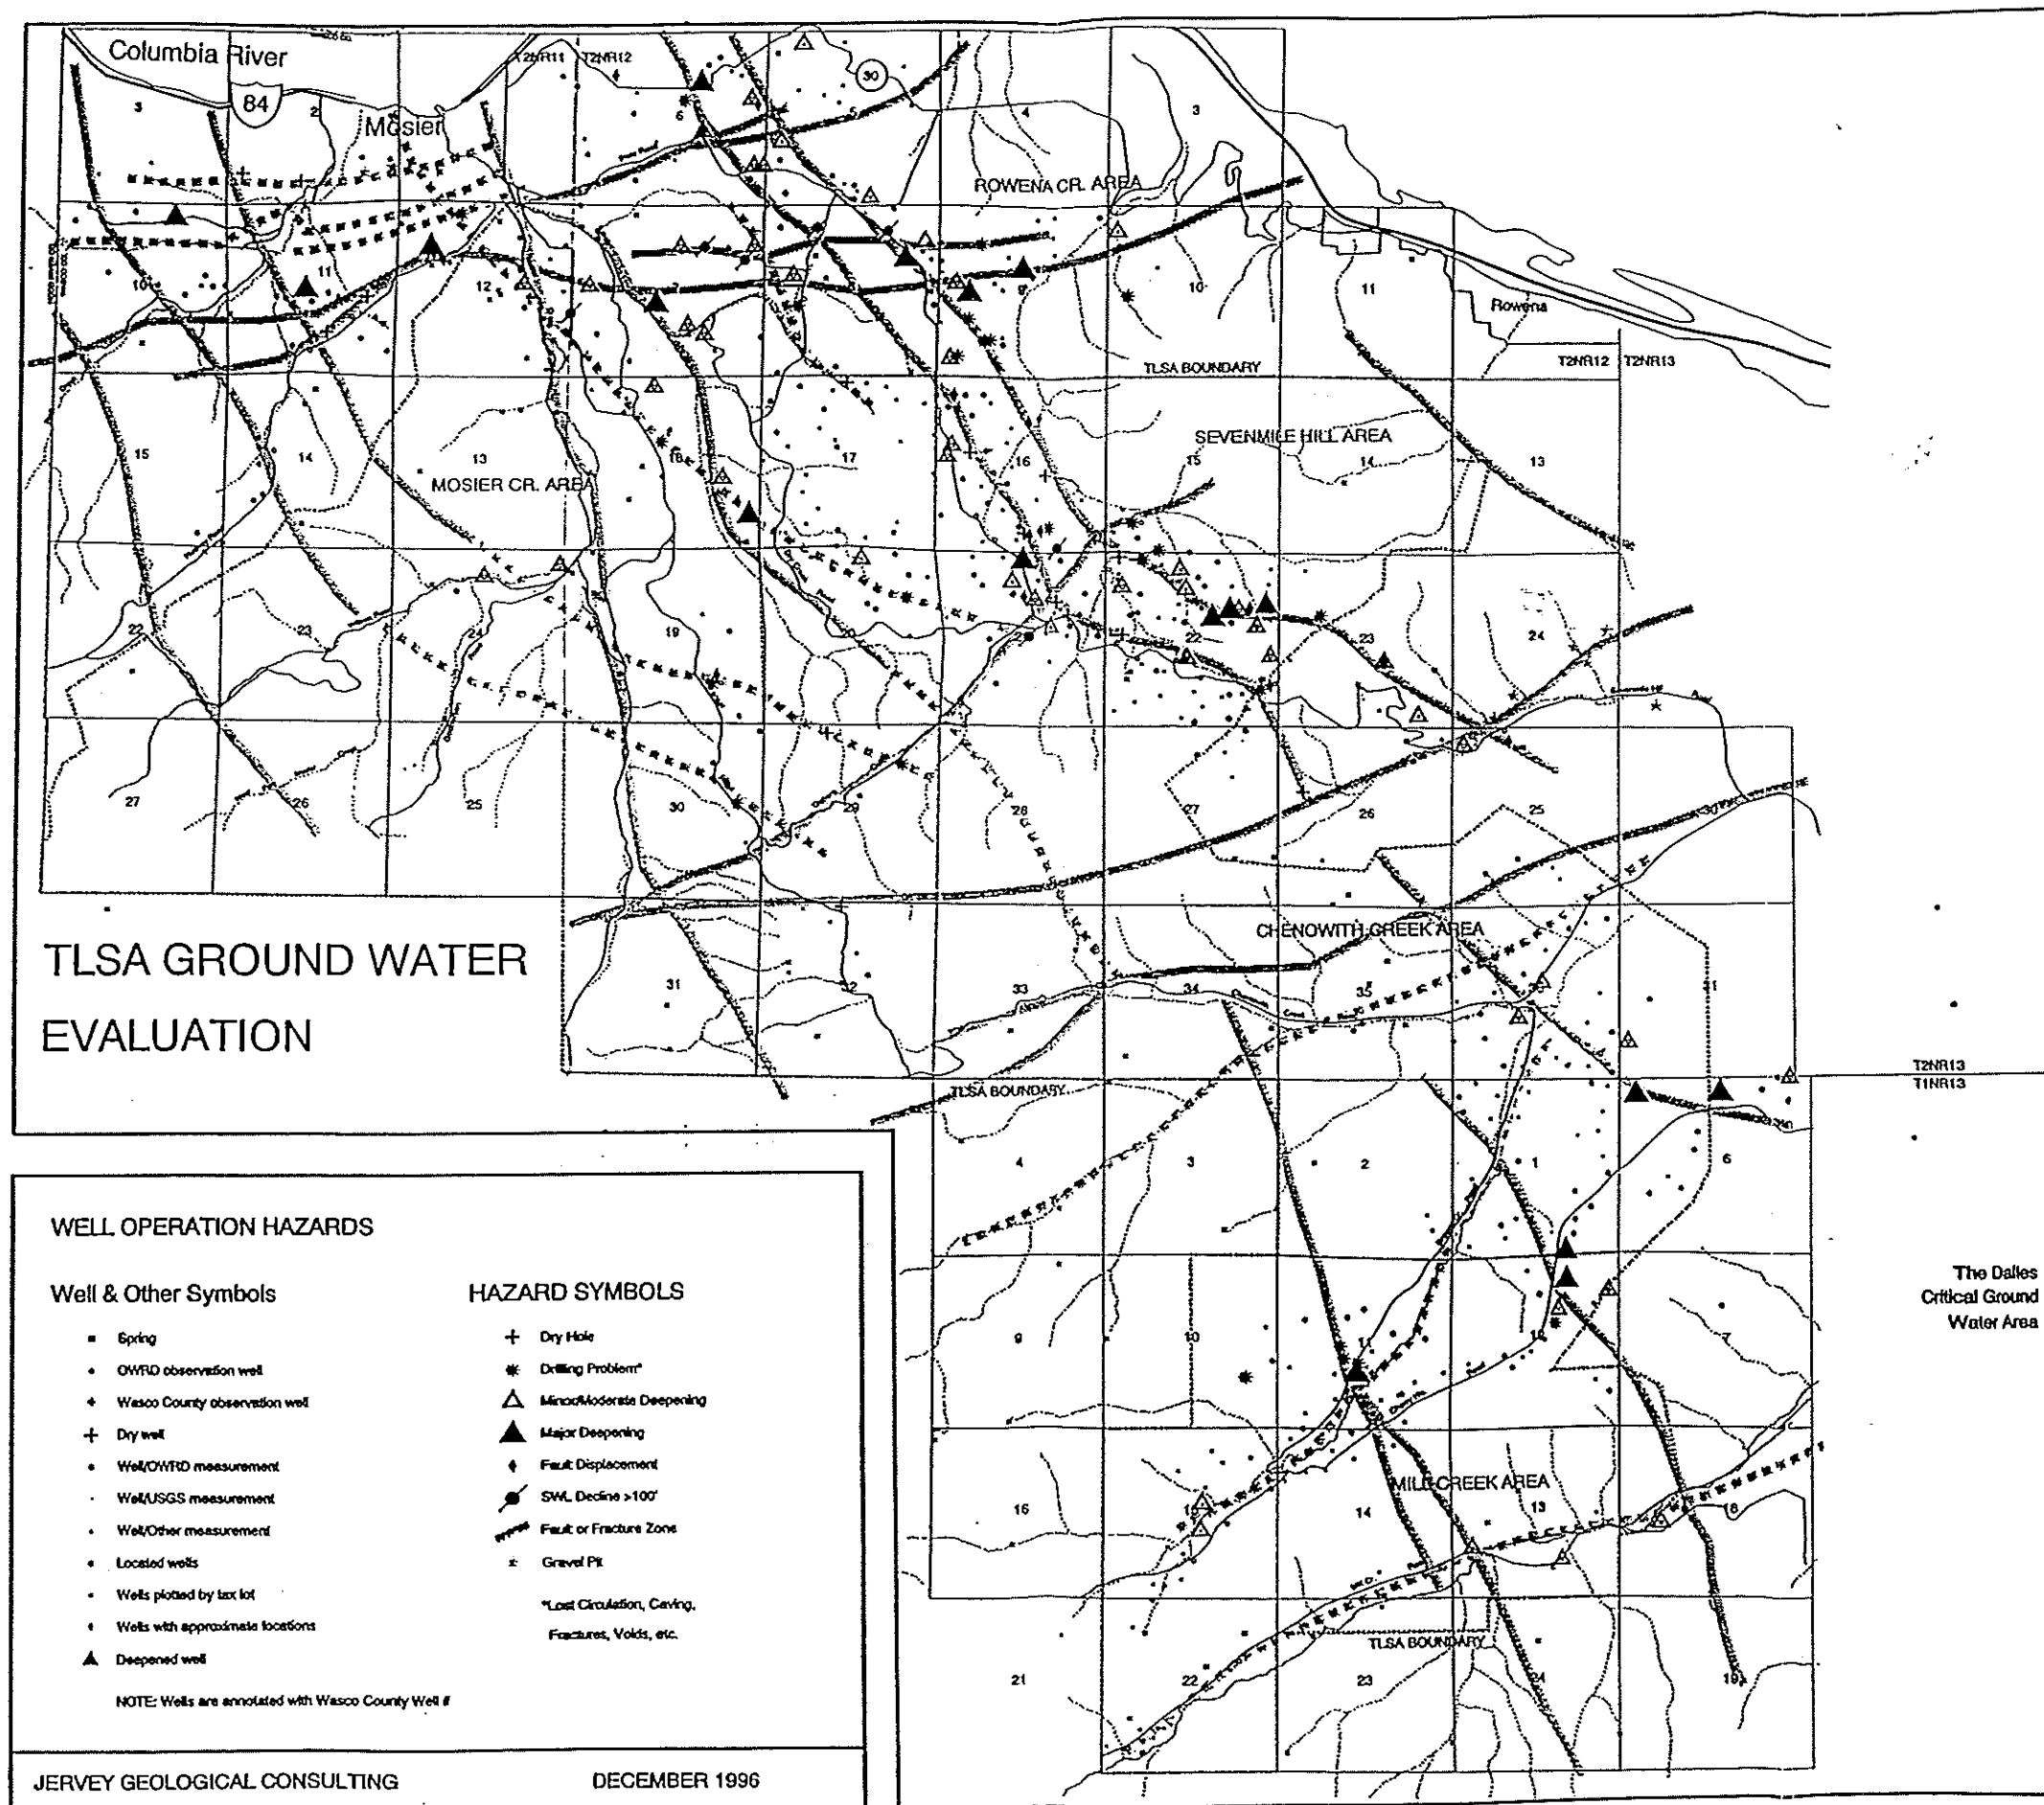

Figure 17. Aerial photograph showing fault zone near Cherry Heights Road, Wasco County, Oregon.

Figure 18. Aerial photograph showing fault zone visible from Interstate 84 at Rowena.

Figure 19. High altitude aerial photograph showing fault displacements, northern Wasco and Hood River Counties, Oregon.

Figure 20. Examples of deep wells with deep static water levels, TLSA, Wasco County.

- Are these wells stable in regard to static water level?
- Should areas with a high proportion of these wells have more restricted allowable well spacing?

To date, there are no hydrograph wells are very few multiple measures in this type of well. This issue will be discussed again in the report recommendations.

The problem for both individual land owners and for Wasco County is that the prediction of well performance is highly dependent on individual well conditions. The best course to follow under these circumstances is close monitoring of existing densely spaced and deep wells and pump testing in a variety of aquifers. The following discussion attempts to answer in part, how closely spaced wells may be for optimum performance.

#### WELL SPACING - DOMESTIC

The subject of appropriate well spacing is a controversial one. In order to clarify points made in this discussion, proper well spacing is defined as spacing required in order to allow good operation of a domestic well in the shallowest perennial aquifer available. High rate irrigation wells will be addressed separately at the end of this section.

Regardless of aquifer type, most wells outside of the agricultural areas of TLSA show similar characteristics of rate and capacity (5 to 60 gpm at 100% drawdown in one hour). Under these conditions, observations may be made about the area of influence of any individual low rate, low specific capacity domestic well.

Since production (pump) tests are not available, at the present time it is necessary to use other observations to estimate the area affected by a single domestic well. A review of the 28 cross sections in this report shows the minimum horizontal distance to outcrop that can be maintained by several typical TLSA aquifers. On average, most low rate aquifers (basalts and sandstones) can maintain a distance to outcrop of 300-400 feet before failure. This distance is approximately the radius that would be affected by these wells if they were at 100% drawdown. Under most conditions, wells are only operated at 60% or less of maximum drawdown. Ideally, then, on the average, minimum well spacing should be in the range of 360 to 500 feet. Well spacing closer than one half this range should be avoided.

This somewhat vague estimation can be supplemented by other data. The map on the following page shows areas (called units) where well spacing is dens-

est in the TLSA. These units can be important tools in planning for conservation of ground water resource.

Table 3 shows each unit, the aquifers present in its wells, well densities, age of wells and average well spacing and average of the closest one third well spacing. These areas can provide the best information possible to support ground water development (or limitations on development). It is obvious that current average well spacing is controlled by zoning. But in each unit, some wells are very closely spaced, and it is this group which should be used to direct future development.

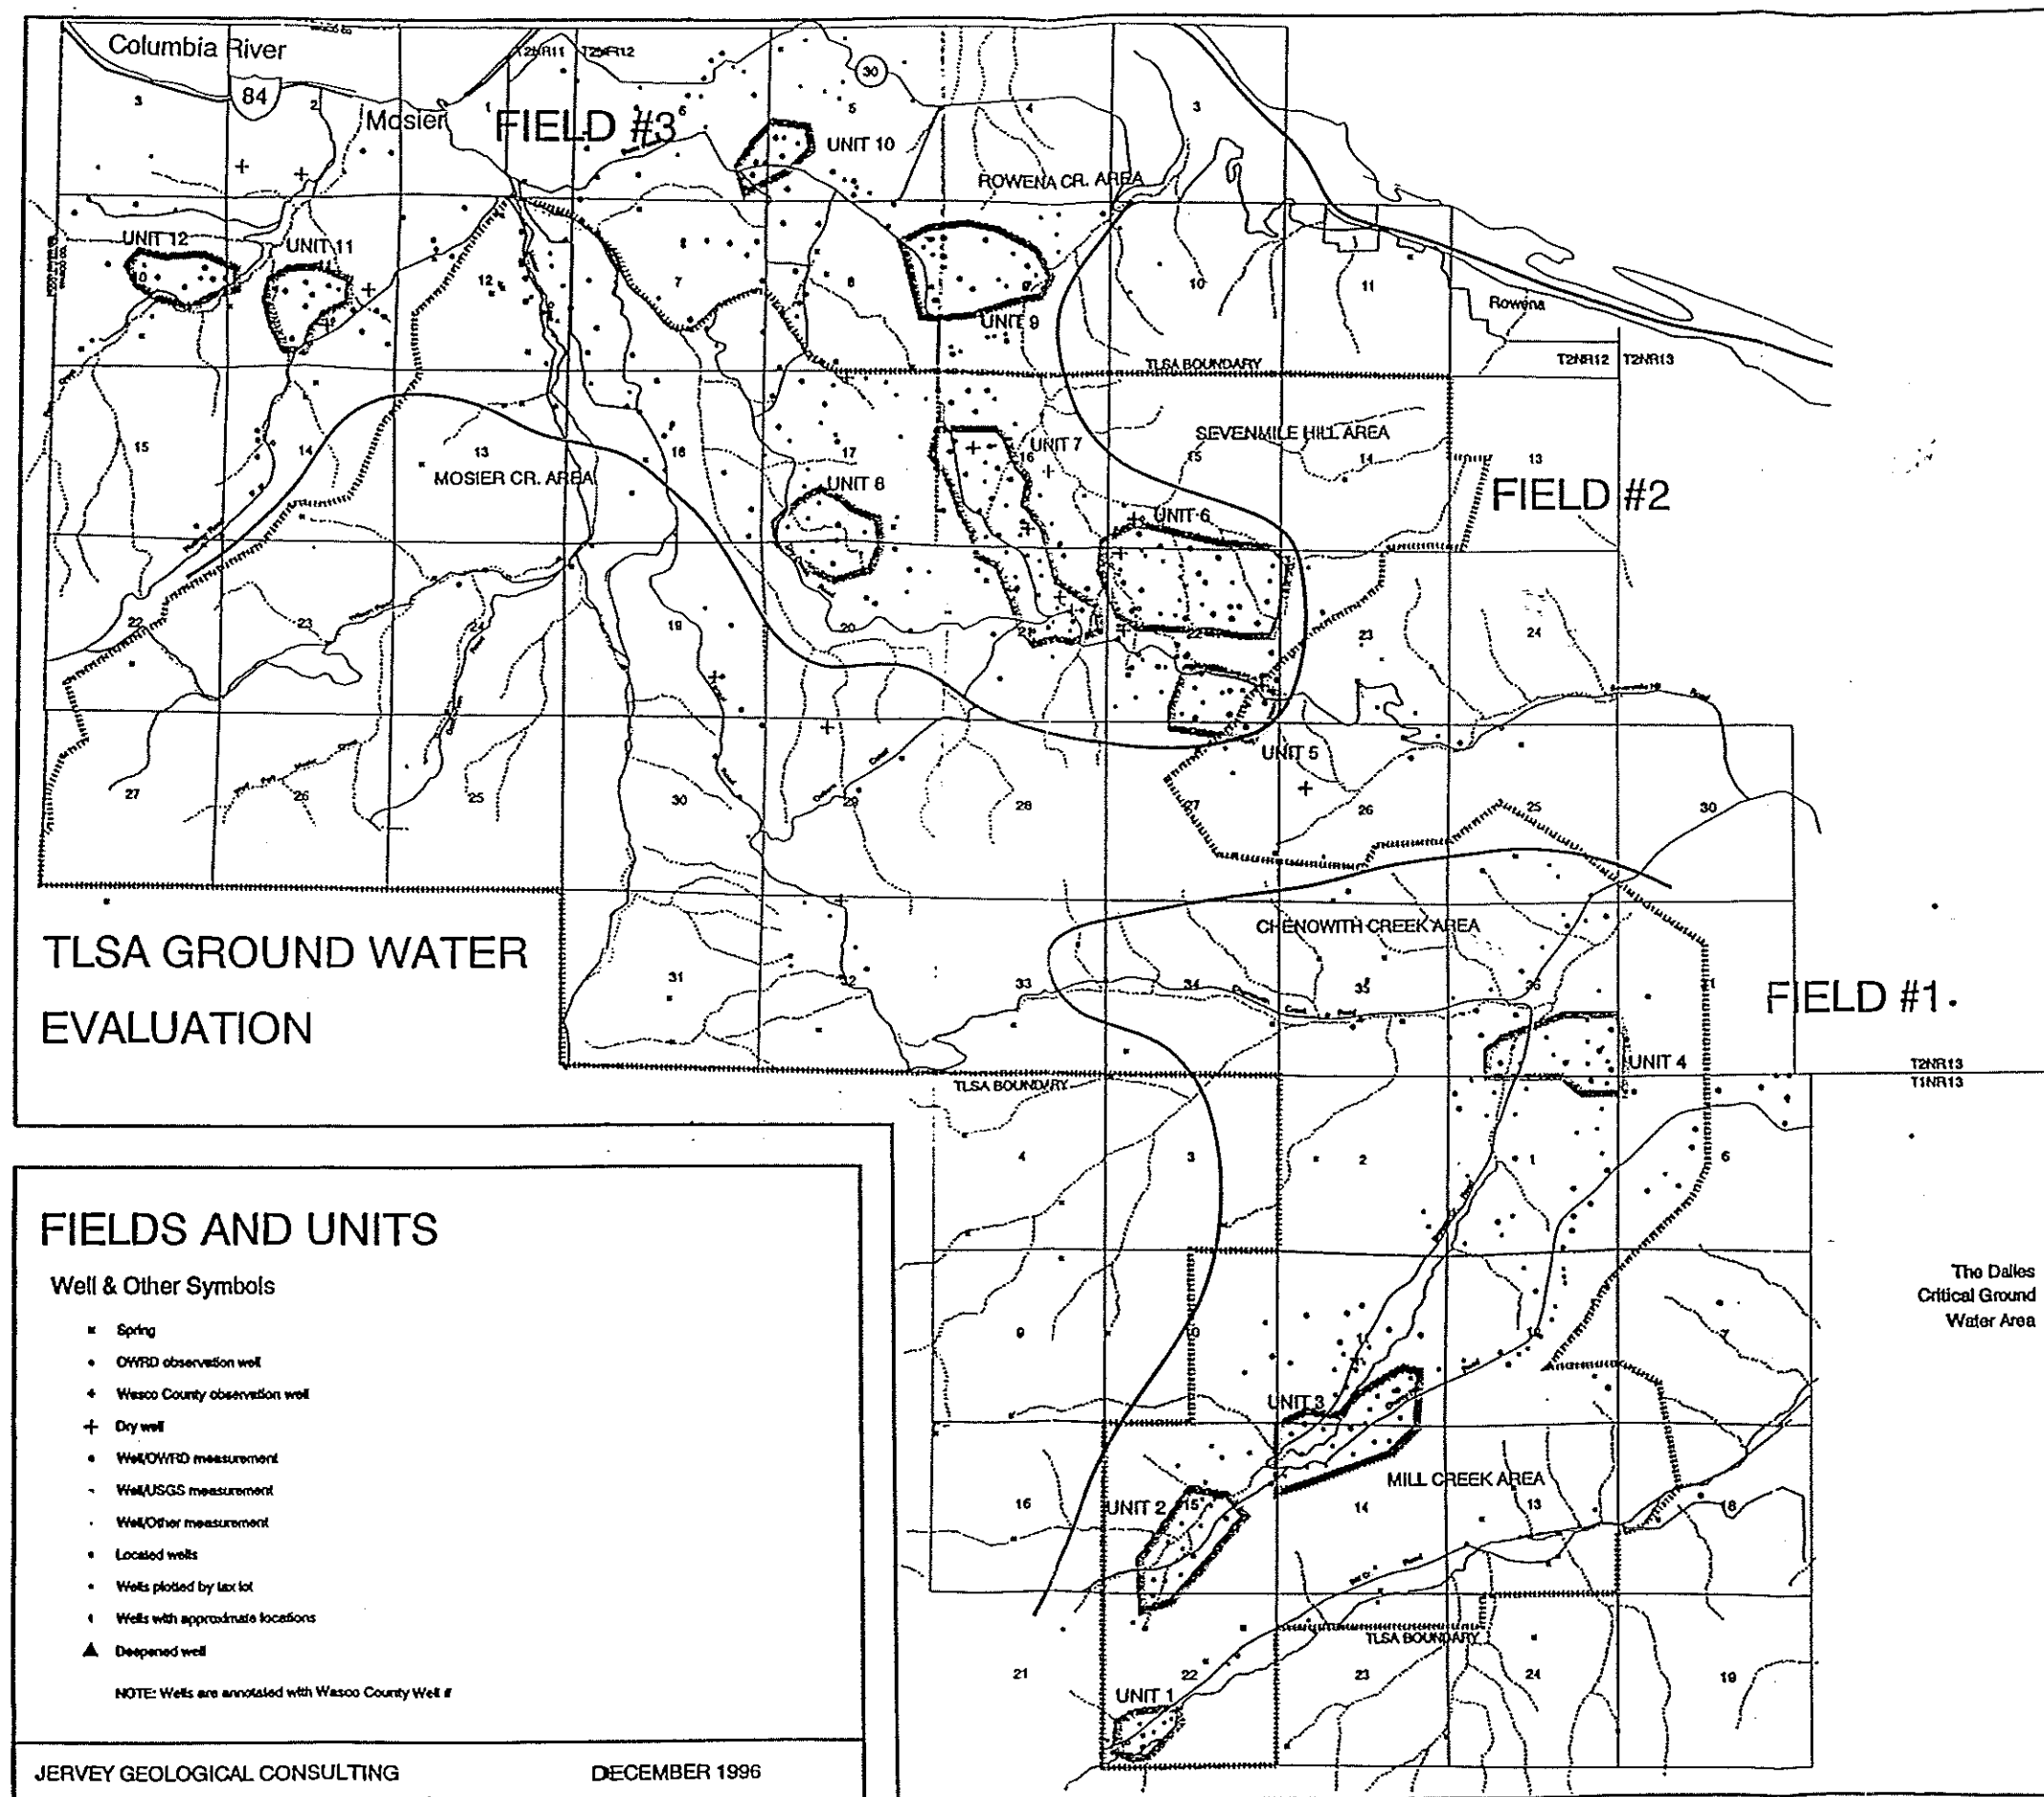

Going back to the beginning of this report, clearly there is a wide spread of theoretical estimates of how much recharge might be available. There is no inexpensive way to determine by these methods an accurate estimate of recharge or discharge. The biggest problem is in accurately estimating the amount of recharge any individual aquifer can receive, not how much is available. The best sources of information about this subject are actual wells that have been operated successfully over a reasonable period of time at a particular well density.

#### REDUCE RISK BY USING EXISTING WELL SPACING AS A GUIDELINE

Table 3 shows that for the most part, the units considered appear to support one well per 10 acre spacing. In addition, there are wells that are more closely spaced and give guidelines about what possible minimum spacing could be supported.

From this information, a simple planning tool can be developed. For sections where aquifer type and performance are known and drilling density is highest, well spacing may be one well per 10 acres (optimum) without undue risk. Because there are indications that higher densities may be feasible, an additional 10% of locations may be at closer spacing, for a total of about 70 wells per section allowable, with a 10 acre optimum and a 5 acre minimum spacing. Obviously there should be flexibility in applying this as a guideline.

In sections which have few wells, and especially in such sections with deep wells and static water levels a more conservative guideline should be set. A suggestion is that this type of section be limited to twenty acre per well spacing until such time as more is known about aquifers present and their performance. When that well density is approached, a section or area can be reviewed to see if a closer spacing is feasible. Or, if enough data exists, to compare it with other more densely drilled areas, which may be used as a rationale to increase drilling density.

REVIEW WELL DATA AS MORE INFORMATION IS AVAILABLE

When sections or areas reach about the maximum density described above, further subdivision should be reviewed in view of well performance. If the wells over time have not responded adversely to the closest current spacing, a slight increase in well density may be prudent. On the other hand if well performance has negative warning flags new drilling (or subdivision) may be restricted.

At this point it would be extremely useful to look at analogs in other areas, if they exist. Comparable development in conditions of similar rainfall and in similar aquifer types would also be helpful in assessing risk of increased well density.

This type of process should be in a deliberate manner for the best and most successful result. If well drilling were to immediately proceed from no wells in a section to one or two acre density, many errors and some severe problems would be unavoidable. This type of risk is unacceptable both to county residents using ground water and county taxpayers who must pay for court costs incurred by the county to defend permitted subdivision.

The following recommendations can be made to assist Wasco County in planning ground water development:

- In the short term, the recommended and minimum spacing discussed previously could provide a guideline for planning.
- Guidelines should be reviewed periodically as new information may affect them.
- The unit areas indicated (or some version of them) should be the sites for further collection of data. At least two measured wells and several pump tests in each of them would be a goal for the next two years. This information could be used to further refine the estimated wells allowed per acre above.
- Most of this effort should be made by landowners as volunteered work. Wasco County may be able to coordinate the collection of data and verify it, but the manpower requirement to survey these units is onerous and perhaps not primarily the responsibility of the county. It is possible that interested individuals may be able to do a great deal more in the area of data collection

UNIT #	AQUIFER SYSTEM	TOTAL ACRES		AVERAGE WELL DISTANCE FEET	AVERAGE LOWER 1/3 WELL DISTANCE FEET	DENSEST ACRES PER WELL	PRIORITY

Table 3. Summary of well spacing in TLISA units.

than local or state government could afford to do.

- The effort above would have many positive rewards; one of the most important of these would be the emphasis on knowledge and control for the individual well owners. The more they know about their own situation and ground water as a whole, the better off the entire community will be.
- Continued effort on a number of fronts to improve well location accuracy; particularly important are dry holes, deepened wells and any wells with multiple static water level measurements.
- A manner of well naming so that one location would have one designation for all of its history. Many problems are caused by renumbering a well any time anything happens to it. The clerical problems this will create in the next ten to twenty years could be enormous.

The reason it is important to commit to this type of project is actually for the long term. At some point in future, one to two acre spacing for wells may be requested by development. At this extreme, it is best to use actual examples of well development to either permit or restrict denser drilling. Wasco County has done an exemplary job of data collection and should continue this effort.

#### WELL SPACING - IRRIGATION AREAS

Wells with high rates occur in the following areas: Mill Creek, Chenoweth Creek, Mosier Creek and adjacent orchard area. Wells with sustainable rates of greater than 60 gpm can, if operated continuously, easily affect water levels in areas of 1 to 5 square miles in the same aquifer system. In view of the possibility that these wells establish a more or less permanent cone of depression, it is probable that they have an impact on some domestic wells around them, if they are in the same aquifer system.

The cone of depression formed will, in the case of fracture controlled aquifers, not be circular but will have dimensions controlled by fracture trends. The domestic well owner should be aware of this and understand the possibility that his well may be affected by irrigation wells. For this and a variety of other reasons, production testing of a sampling of irrigation wells is strongly recommended in order to improve understanding of their performance characteristics and potential for interference over distance. This testing could also identify wells that have incurred significant damage over time, resulting in reduced rates. An

important relationship to develop would be the graph of well capacity versus radius of influence as a guideline to both irrigators and domestic well owners. This type of activity is probably best pursued by Oregon Water Resources Department.

The restriction of irrigation usage is not the domain of county regulation. However, the nomograph of capacity versus radius of influence should be used to control, at least to some extent, well spacing in irrigation wells. The detrimental effect of composite cones of depression could in many instances, be avoided with better information and spacing recommendations to water right holders. This matter has little to do with volume of water used; rather the proper and most efficient use of ground water available for irrigation.

#### WATER QUALITY

The evaluation of quality of ground water was not a primary goal of this report, however there are two general observations which may be made:

In the original TLSA questionnaire responses, more complaints were voiced about water quality than amount of water available. The most common objection was to water with high iron content and/or unpleasant odor. These wells are almost always located very close to fault or fracture zones. The ground water in them may be mixing with upward percolating warmer waters which also carry more minerals in solution. The most likely solution to this type of problem is in the purchase of equipment which will filter or remove offending minerals.

From the first section of this report, it may be surmised that septic fields might contaminate local water supplies in shallow aquifers. Periodic inexpensive testing for contamination is recommended to anyone concerned about this potential problem.

#### CONCLUSION

It is hoped that the information presented in this report will be helpful in the process of assessing the TLSA ground water resource. The current tendency toward higher precipitation offers an ideal time to gather data and learn more about TLSA aquifers. However, it is only a temporary reprieve from the average conditions that have to be incorporated into resource planning.

Many of the best observations and ideas in this report were based on comments by the TLSA Technical and Steering Committees, the interested public and the Wasco County Planning Staff. Together with well drillers and the local land owners, they can arrive at a reasonable approach to ground water development in the TLSA.

## ACKNOWLEDGEMENTS

The people listed below were generous with ideas, suggestions and observations that are used in this study. The author wishes to thank them for their time and efforts.

### RESIDENTS/LAND OWNERS OF WASCO COUNTY:

Sue Bennett	Carol Goter	Mark and Diane Mazeski
Frans Bosman	Wayne Haythorn	Sandra and Deane Preston
Steven Cain	Delbert and Elaine Huskey	Bill and Jeanne Reeves
Brenda and Ron Carroll	Jack and Betty Huskey	Mike Sandoz
Linda Cartwright	Ken and Wendy Huskey	Carole Schmidt
Janine and Joseph Czerniecki	Wayne and Helen Huskey	Tamara Shannon
Betty Daniel	Greg Koonce	Mary Soden

Exhibit B

Betzing Conditions

- 1) The permit shall allow one single family dwelling and attached garage only.
- 2) At a minimum all conditions required pursuant to the existing County ordinances regulating dwellings in RR-10 zone shall be applied as a condition of development.
- 3) The rear yard set back shall be the greater of 75 feet or the amount required by applicable County ordinance.
- 4) Betzing shall develop and maintain a water source which is capable of delivering water at the rate of 20 gallons per minute continuously for 50 minutes (1,000 gallons) on a year around basis.
- 5) Compliance with these conditions shall be checked though an on-site review by a qualified person selected by the County Planning Department.

**GUIDE FOR USING SOIL SURVEY  
SINGLE PHASE INTERPRETATION SHEETS**

**PREPARED BY  
SOIL CONSERVATION SERVICE  
PORTLAND, OREGON  
JUNE 1982**

GUIDE FOR USING SOIL SURVEY  
SINGLE PHASE INTERPRETATION SHEETS IN OREGON

This guide contains a detailed explanation of the Single Phase Interpretation Sheets (SPI), the kinds of rating terms used, and the information presented on the sheets.

Single Phase Interpretation Sheets have been prepared for each kind of soil that has been mapped in the county. Each sheet has a brief description of each kind of soil, its properties, and predictions of its behavior for various uses.

This guide has the following sections:

- I. Narrative Soil Description
- II. Estimated Soil Properties
- III. Explanation of Rating Terms
- IV. Sanitary Facilities
- V. Building Site Development
- VI. Construction Material
- VII. Water Management
- VIII. Recreational Development
- IX. Capability and Predicted Yield - Crops and Pasture
- X. Woodland Suitability
- XI. Windbreaks
- XII. Wildlife Habitat Suitability
- XIII. Potential Native Plant Community
- XIV. Terms and Definitions of Restrictive Features  
Used on "SPI" Sheets
- XV. Glossary

I. NARRATIVE SOIL DESCRIPTION

At the top of each SPI sheet is the map symbol, county in which applicable, and the name of the soil for each area on the soil map which has that symbol in it. Below this is a brief paragraph which describes the nature and properties of the soil and tells where the soil is on the landscape.

## II. ESTIMATED SOIL PROPERTIES

The table, "Estimated Soil Properties," at the top of the sheet, gives estimates of properties, characteristics, and conditions which influence the behavior of the soil when used for different purposes.

COMMENTS THAT FOLLOW HELP EXPLAIN EACH COLUMN ON THE TABLE.

Depth from Surface. The layers shown here take into consideration those properties that influence plant growth and the engineering behavior of the soil.

Classification. Three systems of soil classification are shown in this table. The USDA texture is determined by the percent of sand (.05 to 2.0 millimeters), silt (.05 to .002 millimeter), and clay (below .002 millimeter) after the particles larger than 2 millimeters have been removed. Major soil textural classes are given such as sands, sandy loams, silt loam, clay loam, and clay. Presence of significant amounts of rock fragments is indicated by modifiers such as gravelly, shaly, cobbly, or stony. Muck, peat, mucky peat, and peaty muck are used for organic soils in place of the textural class names for mineral soils.

In the block indicating USDA texture, standard abbreviations are used to indicate texture. Up to three textures can be entered on each line. If more than one texture is used, they are separated by commas. If modifiers are used, they are attached to the texture by a hyphen, e.g., GR-SL. If a layer is stratified, SR is used as a modifier, and the end members of the textural range are connected by hyphens, e.g., SR-S-L or SR-S-GR-C. The following list of modifiers and textures may appear on the Single Phase Interpretation Sheets:

### Modifier:

BY	Bouldery	GR	Gravelly
BYV	Very bouldery	GRC	Coarse gravelly
BYX	Extremely bouldery	GRF	Fine gravelly
CB	Cobbly	GRV	Very gravelly
CBA	Angular cobbly	GRX	Extremely gravelly
CBV	Very cobbly	MK	Mucky
CBX	Extremely cobbly	PT	Peaty
CN	Channery	SH	Shaly
CNV	Very channery	SHV	Very shaly
CNX	Extremely channery	SHX	Extremely shaly
CR	Cherty	SR	Stratified
CRC	Coarse cherty	ST	Stony
CRV	Very cherty	STV	Very stony
CRX	Extremely cherty	STX	Extremely stony
FL	Flaggy	SY	Slaty
FLV	Very flaggy	SYV	Very slaty
FLX	Extremely flaggy	SYX	Extremely slaty

Texture or terms used in lieu of texture:

COS	Coarse sand	CE	Coprogenous earth
S	Sand	CEM	Cemented
FS	Fine sand	DE	Diatomaceous earth
VFS	Very fine sand	FB	Fibric material
LCOS	Loamy coarse sand	FRAG	Fragmental material
LS	Loamy sand	G	Gravel
LFS	Loamy fine sand	GYP	Gypsiferous material
LVFS	Loamy very fine sand	HM	Hemic material
COSL	Coarse sandy loam	ICE	Ice or frozen soil
SL	Sandy loam	IND	Indurated
FSL	Fine sandy loam	MARL	Marl
VFSL	Very fine sandy loam	MPT	Mucky-peat
L	Loam	MUCK	Muck
SIL	Silt loam	PEAT	Peat
SI	Silt	SG	Sand and gravel
SCL	Sandy clay loam	SP	Sapric material
CL	Clay loam	UWB	Unweathered bedrock
SICL	Silty clay loam	VAR	Variable
SC	Sandy clay	WB	Weathered bedrock
SIC	Silty clay	CIND	Cinders
C	Clay		

The Unified system is based on the identification of soils according to particle size, plasticity, liquid limit, and organic matter. Soils are grouped in 15 classes. There are eight classes of coarse-grained soils, identified as GW - well-graded gravel, GP - poorly graded gravel, GM - silty gravel, GC - clayey gravel, SW - well-graded sands, SP - poorly graded sands, SM - silty sands, and SC - clayey sands. There are six classes of fine-grained soils, identified as ML - inorganic silts, CL - inorganic clays (lean clays), OL - organic silts of low plasticity, MH - inorganic silts with high liquid limits, CH - inorganic clays of high plasticity (fat clays), and OH - organic clays of medium to high plasticity. There is one class of highly organic soils, identified as PT - peat and other highly organic soils.

The American Association State Highway Transportation Officials (AASHTO) system is used to classify soils according to those properties that affect use in highway construction and maintenance. In this system, a mineral soil is placed in one of the seven basic groups ranging from A-1 to A-7 on the basis of grain-size distribution, liquid limit, and plasticity index. In group A-1 are gravelly soils of high-bearing strength, or the best soils for subgrade (foundation). At the other extreme, in group A-7, are clay soils that have low strength when wet and that are poorest soils for subgrade. Highly organic soils (peat and muck) are classified in an A-8 group. These organic soils are unsuitable for use in embankments and subgrades. They are highly compressible and have low strength.

Coarse fragments over 3 inches refers to percent by weight of rock fragments. In the Unified and AASHTO systems, these fragments are not considered in the classification. However, it is necessary to know how much of the fragments are present in evaluating the class.

Percent of Material Passing various sieve sizes is determined on a weight basis. The number 4 sieve is 4.7 mm in diameter, the number 10 is 2.0 mm, the number 40 is 0.42 mm, and the number 200 is 0.074 mm. In the Unified system, the fines (silt and clay) are the material passing the number 200 sieve. Gravel is that material retained on the number 4 sieve. The amount retained on the number 200 sieve minus the gravel is the percent sand. In the AASHTO system, the material passing the number 200 sieve is clay and silt. Gravel is the material retained on the number 10 sieve. The amount retained on the number 200 sieve minus the gravel is the percent sand.

The figures shown under each sieve size are obtained either by laboratory test data or by estimates based on USDA textural classes.

Liquid limit and plasticity index indicate the effect of water on the strength and consistence of soil material. As the moisture content of a clayey soil is increased from a dry state, the material changes from a semisolid to a plastic state. If the moisture content is further increased, the material changes from a plastic to a liquid state. The plastic limit is the moisture content at which the soil material changes from a semisolid to a plastic state; and the liquid limit from a plastic to a liquid state. The plasticity index is the numerical difference between the liquid limit and the plastic limit. It indicates the range of moisture content within which a soil material is plastic.

Liquid limit and plasticity index are obtained either by engineering tests or by estimates of USDA texture and consistence. Assuming 15-bar water is known, liquid limit can be estimated as follows: 2 times 15-bar water percentage plus 10 equals liquid limit.

Clay is shown as a range of total clay as a percent of the less than 2 mm material for each horizon. Where clay is not applicable, such as in organic layers, no figures are shown.

Moist bulk density of the soil is the mass per unit volume of the <2 mm material at a moisture content near field capacity (1/3-bar in most soils). It excludes the mass of the liquid phase, and the volume over which the weight is determined includes interparticle space. It is expressed as grams per cubic centimeter or pounds per cubic foot.

Permeability is that quality of a soil that enables it to transmit water or air. Accepted as a measure of this quality is the rate at which soil transmits water while saturated. Permeability is estimated on the basis of those soil characteristics observed in the field, particularly structure and texture. The estimates do not take into account lateral seepage or such transient soil features as plowpans and surface crusts.

The following classes and rates are used:

<u>Permeability class</u>	<u>Numerical range (inches per hour)</u>
Very slow	Less than 0.06
Slow	0.06 - 0.2
Moderately slow	0.2 - 0.6
Moderate	0.6 - 2.0
Moderately rapid	2.0 - 6.0
Rapid	6.0 - 20.0
Very rapid	More than 20

Available water capacity is the ability of soils to hold water for use by most plants. It is commonly defined as the difference between the amount of water in the soil at field capacity and the amount at the wilting point of most crop plants. The values are reported as inches of water per inch of soil.

<u>Class</u>	<u>Inches/inch</u>
Very high	More than .20
High	.15 - .20
Medium	.10 - .15
Low	.05 - .10
Very low	Less than .05

Soil reaction is the degree of acidity or alkalinity of a soil, expressed in pH values. The pH values and terms used to describe soil reaction are as follows:

<u>Reaction description</u>	<u>pH range</u>
Extremely acid	Below 4.5
Very strongly acid	4.5 - 5.0
Strongly acid	5.1 - 5.5
Medium acid	5.6 - 6.0
Slightly acid	6.1 - 6.5
Neutral	6.6 - 7.3
Mildly alkaline	7.4 - 7.8
Moderately alkaline	7.9 - 8.4
Strongly alkaline	8.5 - 9.0
Very strongly alkaline	Above 9.0

Salinity of soils is based on the electrical conductivity of the saturation extract as expressed in millimhos per centimeter at 25°C. Electrical conductivity is related to the amount of salts more soluble than gypsum in the soil. High amounts of soluble salts in the soil affect plant growth and the corrosion of uncoated steel. A value of 2.0 or less would indicate a very slight limitation for crop production whereas a value of more than 16.0 would indicate a severe salinity problem for crop production. A dash is shown if salinity is no problem for growing plants.

<u>Class</u>	<u>Salinity</u> <u>(MMHOS/CM)</u>
1. Very slightly saline	0-4
2. Slightly saline	4-8
3. Moderately saline	8-16
4. Strongly saline	> 16

Shrink-swell potential is the relative change in volume to be expected of soil material with changes in moisture content, that is, the extent to which the soil shrinks as it dries out or swells when it gets wet. Extent of shrinking and swelling is influenced by the amount and kind of clay in the soil. Shrinking and swelling of soils causes much damage to building foundations, roads, and other structures. A high shrink-swell potential indicates a hazard to maintenance of structures built in, on, or with material having this rating.

The soil erodibility factor (K) used in the universal soil loss equation is a measure of the susceptibility of soil particles to detachment and transport by rainfall and runoff. Soil properties affecting soil erodibility are: soil texture (especially the percent of silt plus very fine sand), percent of sand greater than 0.10 mm, organic matter content, soil structure (type, grade), soil permeability, clay mineralogy, and rock fragments.

K values and classes used are as follows:

Low .00, .02, .05, .10, .15, .17, .20

Moderate .24, .28, .32, .37

High .43, .49, .55, .64

Soil loss tolerance (T), sometimes called permissible soil loss, is the maximum rate of soil erosion that will permit a high level of crop productivity to be sustained economically and indefinitely. T values of 1 through 5 are used. The numbers represent the permissible tons of soil loss per acre per year where food, feed, and fiber plants are grown. T values are not applicable to construction sites or to other nonfarm uses of the erosion equation.

A wind erodibility group consists of soils having the same potential for soil blowing. The properties that affect soil blowing are those that affect the stability of the aggregates against breakdown by tillage and abrasion from wind. These properties are texture, organic matter, calcium carbonate content, mineralogy and perhaps others such as freezing and thawing, or wetting and drying. Texture of the surface inch of soil has the greatest single influence on soil erodibility and is used as a guide for estimating wind erodibility groups. There are seven groups with group 1 being the most susceptible to soil blowing and group 7 being the least susceptible.

In parts of the state where wind erosion is not considered to be a problem, a dash is entered for the surface layer.

Organic matter percentage is shown in the surface layer. Whole numbers are used from 1 and above, tenths from 1 to .5, and <.5 below .5, e.g., <.5-1, 2-5.

Corrosivity pertains to potential soil-induced chemical action that dissolves or weakens uncoated steel or concrete. Rate of corrosion of uncoated steel is related to soil properties such as drainage, texture, total acidity, electrical resistivity, and electrical conductivity of the soil material. Corrosivity for concrete is influenced mainly by the content of sodium or magnesium sulfate but also by soil texture and acidity. Installations of uncoated steel that intersect soil boundaries or soil horizons are more susceptible to corrosion than installations entirely in one kind of soil or in one soil horizon. Corrosivity is rated for the whole soil rather than for each horizon. A corrosivity rating of low means that there is a low probability of soil-induced corrosion damage. A rating of high means that there is a high probability of damage, so that protective measures for steel and more resistant concrete should be used to avoid or minimize damage.

Flooding is given in terms of frequency, duration, and months. Duration and months that floods are likely to occur are given only for soils that flood more frequently than rare. Following is a brief explanation.

Frequency:	None	(No reasonable possibility of flooding)
	Rare	(Flooding unlikely but possible under abnormal conditions)
	Common	(Flooding likely under normal conditions)
		Occasional (Less often than once in 2 years)
		Frequent (More often than once in 2 years)
Duration:	Very brief	(Less than 2 days)
	Brief	(2 days to 7 days)
	Long	(7 days to 1 month)
	Very long	(More than 1 month)
Months:	These are the months of probable flooding.	

Water table is given in terms of depth, kind, and months. The depth range of a seasonally high water table is given to the nearest half foot. If the water table is below 6 feet or if the water table exists for less than 1 month, the value greater than 6 (6.0) is used. Kinds of water table listed are: apparent, perched, or artesian. The months shown are those within which the water table is likely to be within the ranges given in the depth column.

A cemented pan prevents or restricts root and water penetration. These include duripan, petrocalcic, orstein and other cemented layers. "Thin" indicates the layer is thin enough that excavation can be made with common construction equipment for pipelines and other excavations. "Thick" indicates that special equipment or blasting can be expected to be necessary. A dash indicates a pan does not occur above a 60-inch depth.

Bedrock prevents or restricts root and water penetration. "Soft" rock can be excavated using trenching machines, backhoes, and other equipment common to making excavations. "Hard" rock requires blasting or use of special equipment above what is considered normal. The normal depth of observation is about 60 inches.

Subsidence is induced when organic soils or other wet soils are drained and is expressed in inches.

Hydrologic soil groups are used to estimate runoff from rainfall. Soil properties are considered that influence the minimum rate of infiltration obtained for a bare soil after prolonged wetting. These properties are: depth of seasonally high water table, intake rate and permeability after prolonged wetting, and depth to a very slowly permeable layer. The influence of ground cover is treated independently--not in hydrologic soil groups.

The soils are classified into four groups, A, B, C, and D with Group A having the lowest runoff potential and Group D having the highest runoff potential.

Group A soils have low runoff potential and high infiltration rates even when thoroughly wetted. They consist chiefly of deep, well to excessively drained sands or gravel. These soils have a high rate of water transmission.

Group B soils have moderately low runoff potential and moderate infiltration rates when thoroughly wetted. They consist chiefly of moderately deep to deep, moderately to well drained soils with moderately fine to moderately coarse textures and moderately slow to moderately rapid permeability. These soils have a moderate rate of water transmission.

Group C soils have moderately high runoff potential and slow infiltration rates when thoroughly wetted. They consist chiefly of soils with a layer that impedes downward movement of water, soils with moderately fine to fine texture, soils with slow infiltration due to salts or alkali, or soils with moderate seasonal water tables.

These soils may be somewhat poorly drained. They include well and moderately well drained soils with slowly and very slowly permeable layers such as fragipans, hardpans, hard bedrock and the like at depths of 20 to 40 inches. These soils have a slow rate of water transmission.

Group D soils have high runoff potential and very slow infiltration rates when thoroughly wetted. They consist chiefly of clay soils with a high swelling potential, soils with a permanent high water table, soils with a claypan or clay layer at or near the surface, soils with very slow infiltration due to salts or alkali, and shallow soils over nearly impervious material. These soils have a very slow rate of water transmission.

Potential frost action is the likelihood of upward or lateral expansion of soil (frost heave) because of the formation of segregated ice lenses and the subsequent loss of strength and collapse on thawing. Daily freezing and thawing that tends to lift the crowns of plants out of the group is not included because it does not contribute to the large movement produced by formation of ice lenses.

In areas where potential frost action is not common, such as west of the Cascade Mountains, no interpretations for potential frost action are made.

Where frost action is a potential problem, three classes are used as follows:

- |          |  |
|----------|--|
| Low      | Soils rarely subject to the formation of ice lenses.   |
| Moderate | Soils susceptible to the formation of ice lenses, resulting in frost heave and subsequent loss of strength.        |
| High     | Soils highly susceptible to the formation of ice lenses, resulting in frost heave and subsequent loss of strength. |

### III. EXPLANATION OF RATING TERMS

The soil is also rated for selected uses expected to be important or potentially important to the user. Ratings are given in terms of limitations and suitability. Up to three of the most restrictive features are listed. There may be other features that need to be treated to overcome soil limitations for a specific purpose.

For some uses, degrees of soil limitations are used. The rating terms used are SLIGHT, MODERATE, and SEVERE. For other uses, degrees of soil suitability are used. The rating terms used are GOOD, FAIR, and POOR. Up to three restrictive features are listed if the degree of limitation is more than SLIGHT or if the degree of suitability is less than GOOD.

#### Limitation Ratings:

Slight soil limitation is the rating given soils that have properties favorable for the rated use. This degree of limitation is minor and can be overcome easily. Good performance and low maintenance can be expected.

Moderate soil limitation is the rating given soils that have properties moderately favorable for the rated use. This degree of limitation can be overcome or modified by special planning, design, or maintenance. During some part of the year, the performance of the structure or other planned use is somewhat less desirable than for soils rated slight. Some soils rated moderate require treatment such as artificial drainage, runoff control to reduce erosion, extended sewage absorption fields, extra excavation, or some modification of certain features through manipulation of the soil. For these soils, modification is needed for those construction plans generally used for soils of slight limitation. Modification may include special foundations, extra reinforcements, sump pumps, and the like.

Severe soil limitation is the rating given soils that have one or more properties unfavorable for the rate used, such as steep slopes, bedrock near the surface, flooding hazard, high shrink-swell potential, a seasonal high water table, or low bearing strength. This degree of limitation generally requires major soil reclamation, special design, or intensive maintenance. Some of these soils, however, can be improved by reducing or removing the soil feature that limits use; but, in many situations, it is difficult and costly to alter the soil or to design a structure to compensate for a severe degree of limitation.

#### Suitability Ratings:

A rating of good means the soils have properties favorable for the use. Good performance and low maintenance can be expected.

A rating of fair means the soil is generally favorable for the use. One or more soil properties make these soils less desirable than those rated good.

A rating of poor means the soil has one or more properties unfavorable for the use. Overcoming the unfavorable property requires special design, extra maintenance, or costly alteration.

#### IV. INTERPRETATIONS FOR SANITARY FACILITIES

Septic tank absorption fields. A septic tank absorption field is a soil absorption system for sewage disposal. It is a subsurface tile or perforated pipe system laid in such a way that effluent from the septic tank is distributed with reasonable uniformity into the natural soil.

Criteria used for rating soils (slight, moderate, and severe) for use as absorption fields are based on the limitations of the soil to absorb effluent. Important features affecting this use are permeability, depth to a seasonal water table, flooding, slope, depth to bedrock or hardpan, stoniness, and rockiness.

Sewage lagoons. A sewage lagoon (aerobic) is a shallow lake used to hold sewage for the time required for bacterial decomposition. The requirements for this embankment are the same as for other embankments designed to impound water. (See embankments, dikes, and levees.)

Soil requirements for basin floors of lagoons are slow rate of seepage, even surface of low gradient and low relief, and little or no organic matter.

Sanitary landfill. Because trenches as deep as 15 feet or more are used for many landfills, geologic investigation is needed to determine the potential for pollution of ground water by leachates as well as to ascertain the design needed. Soil survey borings commonly are limited to depths of 5 or 6 feet; however, for some soils, properties can be predicted with reasonable confidence below such depths. Predictions relative to probable depth to a seasonal high water table or to bedrock can be useful in planning for detailed investigation.

Sanitary landfill (trench-type). This type of landfill is a dug trench in which refuse is buried daily and the refuse is covered with a layer of soil material at least 6 inches thick. The material used for covering is the soil excavated in digging the trench. When the trench is full, a final cover of soil material at least 2 feet thick is placed over the landfill. Important features affecting trench-type sanitary landfills are depth to a seasonal high water table, flooding, permeability, slope, texture, depth to bedrock or hardpan, stoniness and rockiness.

Sanitary landfill (area-type). In this type of landfill, refuse is placed on the surface of the soil in successive layers. The soil used for daily and final cover generally must be hauled in from elsewhere. A final cover of soil material at least 2 feet thick is placed over the fill when it is completed. Important features affecting this type of landfill are depth to a seasonal high water table, flooding, permeability, and slope.

Daily cover for area-type landfill generally must be obtained from a source away from the site. Suitability of a soil for use as daily cover is based on properties that reflect workability such as slope, wetness, ease of digging, moving, and spreading the soil during both wet and dry periods. Thickness of suitable soil material will determine the supply. Some damage to borrow area is expected, but if revegetation and erosion control could become serious problems in that area, the soil is rated as poor for use as cover material for fills.

## V. BUILDING SITE DEVELOPMENT

Shallow excavations are those that require digging or trenching to a depth of less than 6 feet. Important features affecting excavations are a seasonally high water table, flooding, slope, soil texture, depth to bedrock or other cemented layer, stoniness, and rockiness.

Dwellings with and without basements, as considered here, are for structures not more than 3 stories high that are supported by foundation footings placed in undisturbed soil. The features that affect the rating of a soil for dwellings are those that relate to capacity to support load and resist settlement under load, and those that relate to ease of excavation. Soil properties that affect capacity to support load are wetness, susceptibility to flooding, density, plasticity, texture, and shrink-swell potential. Those that affect excavation are wetness, slope, depth to bedrock, and content of stones and rocks.

Small commercial buildings, as considered here, have the same requirements and features as described for dwellings. The main difference for commercial buildings is a reduction of slope limits for each limitation class. Canneries, foundries, and the like are not considered here because foundation requirements generally would exceed those of ordinary 3-story dwellings.

Local roads and streets, as rated here, have an allweather surface expected to carry automobile traffic all year. They have a subgrade of underlying material; a base consisting of gravel, crushed rock, or soil material stabilized with lime or cement; and a flexible or rigid surface, commonly asphalt or concrete. These roads are graded to shed water and have ordinary provisions for drainage. They are built mainly from soil at hand, and most cuts and fills are less than 6 feet deep.

Soil properties that most affect design and construction of roads and streets are load-supporting capacity and stability of the subgrade, and the workability and quantity of cut and fill material available. The AASHTO and Unified classifications of the soil material, and also the shrink-swell potential, indicate traffic-supporting capacity. Wetness and flooding affect stability of the material. Slope, depth to hard rock or cemented layers, content of stones and rocks, and wetness affect ease of excavation and amount of cut and fill needed to reach an even grade.

Lawns, Landscaping, and Golf Fairways. The soils are rated for their use in establishing and maintaining turf for lawns and golf fairways, and ornamental trees and shrubs for residential type landscaping. The ratings are based on the use of soil material at the location with some land smoothing. Irrigation may or may not be needed and is not a criteria for rating. Traps, trees, roughs, or greens are not considered as part of the golf fairway.

The properties considered are those that affect plant growth and trafficability after establishing vegetation. The properties that affect plant growth are the content of salt, sodium and sulfidic materials, soil reaction, depth to water table, depth to bedrock or cemented pan, and the available water capacity of the upper 40 inches of soil. The properties that affect trafficability after vegetation is established are flooding, wetness, slope, stoniness, and the amount of clay, sand or organic matter in the surface layer.

## VI. CONSTRUCTION MATERIAL

This section gives the suitability of the soil as source material for construction purposes.

Suitability ratings of good, fair, or poor are given for soils used as a source of roadfill and topsoil. Ratings of probable and improbable are given for sand and gravel.

A rating of probable means that on the basis of the available evidence, the source material is likely to occur in or below the soil. A rating of improbable means that the source material is unlikely to occur within or below the soil. This rating does not consider the quality of the source material because quality depends on how the source material will be used.

Roadfill is soil material used in embankments for roads. The suitability ratings reflect (1) the predicted performance of soil after it has been placed in an embankment that has been properly compacted and provided with adequate drainage, and (2) the relative ease of excavating the material at borrow areas.

Good or fair roadfill material is rated poor where the depth to bedrock or hardpan is less than about 3 feet.

Sand. Sand as a construction material is usually defined as the size of particles ranging from .074 mm (sieve #200) to 4.76 mm (sieve #4) in diameter. Sand is used in greater quantities in many kinds of construction. Specifications for each purpose vary widely. The intent of this rating is to show only the probability of finding material in suitable quantity. The suitability of the sand for specific purposes is not evaluated.

The properties used to evaluate the soils as a probable source for sand are the grain size as indicated by the Unified Soil Classification, the thickness of the sand layer, and the amount of rock fragments in the soil material.

If the lowest layer of the soil contains sand, the soil is rated as a probable source regardless of thickness. The assumption is that the sand layer below the depth of observation exceeds the minimum thickness.

Gravel. Gravel as a construction material is defined as the size of particles ranging from 4.76 mm (sieve #4) to 76 mm (3 inches) in diameter. Gravel is used in great quantities in many kinds of construction. Specifications for each purpose vary widely. The intent of this rating is to show only the probability of finding material in suitable quantity. The suitability of the gravel for specific purposes is not evaluated.

The properties used to evaluate the soil as a probable source for gravel are grain size as indicated by the Unified Soil Classification, the thickness of the gravel layer and the amount of rock fragments in the soil material. If the lowest layer of the soil contains gravel, the soil is rated as a probable source regardless of thickness. The assumption is that the gravel layer below the depth of observation exceeds the minimum thickness.

Topsoil is used for topdressing an area where vegetation is to be established and maintained. Suitability is affected mainly by ease of working and spreading the soil material, as for preparing a seedbed; response of plants when fertilizer is applied; absence of substances toxic to plants; and absence of high amounts of soluble salts or alkali.

Texture of the soil material and its content of stone fragments are characteristics that affect suitability, but also considered in the ratings is damage that will result at the area from which topsoil is taken.

## VII. WATER MANAGEMENT

Pond reservoir areas hold water behind a dam or embankment. Features affecting this use are permeability, depth to bedrock, and depth to cemented pan.

Embankments, dikes, and levees are earthfills designed to hold back water. Features affecting these uses are shear strength, compressibility, permeability of the compacted soil, susceptibility to piping, compaction characteristics, shrink-swell potential, and stoniness. Ratings given apply only to small, homogeneous embankments.

Excavated ponds aquifer fed are bodies of water created by excavating a pit or dugout. Excavated ponds may be divided into two types: those fed by ground water aquifers and those fed by surface runoff. Rated here are those fed by aquifers. Excluded are ponds fed by runoff and also embankment-type ponds where the depth of water impounded against the embankment exceeds 3 feet. The assumption is made that the pond is properly designed, located, and constructed, and that the water is of good quality.

Soil properties affecting aquifer-fed ponds are the existence of a permanent water table, permeability of the aquifer, and properties that interfere with excavation--stoniness and rockiness.

Drainage of cropland and pasture is affected by such soil features as permeability; depth to bedrock, cemented pan, fragipan, claypan, or other layers that influence rate of water movement; depth to seasonal water table; slope; stability of ditchbanks; susceptibility to flooding or ponding; salinity or alkalinity; and availability of outlets for drainage.

Irrigation suitability of a soil is affected by such features as slope; susceptibility to stream overflow; water erosion or soil blowing; soil texture; content of stones; accumulations of salts and alkali; depth of root zone; rate of water intake at the surface; permeability of soil layers below the surface layer and in fragipans or other layers that restrict movement of water; amount of water held available to plants; and need for drainage, or depth to water table.

Terraces and diversions are embankments or ridges constructed across the slope to intercept runoff so that it soaks into the soil or flows slowly into a prepared outlet. Features affecting these uses are percent, length, and shape of slope; depth to bedrock or other unfavorable material; presence of stones; permeability; hazards to water erosion, soil blowing, and soil slipping; availability of outlets; and ease or difficulty in the establishment of vegetation.

Grassed waterways are constructed waterways or outlets shaped or graded and established in suitable vegetation as needed for the safe disposal of runoff from a field, diversion, terrace, or other structure. Soil features affecting this use are slope, susceptibility to erosion, drouthiness, excess alkali and salt, permeability, rooting depth, rock outcrops, stoniness, wetness, and ease or difficulty in the establishment of vegetation.

#### VIII. RECREATIONAL DEVELOPMENT

Knowledge of soils is necessary in planning, developing, and maintaining areas used for recreation. In this section the soils are rated according to limitations that affect their suitability for camp areas, playgrounds, picnic areas, and paths and trails.

Camp areas are used intensively for tents and small camp trailers and the accompanying activities of outdoor living. Little preparation of the site is required other than shaping and leveling for tent and parking areas. Camp areas are subject to heavy foot traffic and limited vehicular traffic. Soil features affecting this use are wetness, flooding during the season of use, permeability, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

Playgrounds are areas used intensively for baseball, football, badminton, and similar organized games. Soils suitable for this use need to withstand intensive foot traffic. Soil features affecting this use are wetness, flooding during season of use, permeability, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, dustiness, and depth to bedrock.

Picnic areas are attractive natural or landscaped tracts used primarily for preparing meals and eating outdoors. These areas are subject to heavy foot traffic. Most of the vehicular traffic, however, is confined to access roads. Soil features affecting this use are wetness, flooding during the season of use, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

Paths and trails are used for local and cross country travel by foot or horseback. Design and layout should require little or no cutting or filling. Soil features affecting these uses are wetness, flooding during season of use, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

#### IX. CAPABILITY AND PREDICTED YIELDS - CROPS AND PASTURE

Capability grouping shows, in a general way, the suitability of soils for most kinds of field crops. The groups are made according to the limitations of the soils when used for field crops, the risk of damage when they are used, and the way they respond to treatment. The grouping does not take into account major and generally expensive landforming that would change slope, depth, and other characteristics of the soil; does not take into consideration possible but unlikely major reclamation projects; and does not apply to rice, cranberries, horticultural crops, or other crops requiring special management.

Those familiar with the capability classification can infer from it much about the behavior of the soils when used for other purposes, but this classification is not a substitute for interpretations designed to show suitability and limitations of groups of soil for range, for forest trees, or for engineering.

In the capability system, all kinds of soils are grouped at three levels: the capability class, subclass, and unit. The capability unit is a grouping of soils into a defined management unit which is not provided on the SPI sheet.

Capability classes - The broadest groups are designated by Roman numerals I through VIII. The numerals indicate progressively greater limitations and narrower choices for practical use, defined as follows:

Class I soils have few limitations that restrict their use.

Class II soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class III soils have severe limitations that reduce the choice of plants, require special conservation practices, or both.

Class IV soils have very severe limitations that reduce the choice of plants, require very careful management, or both.

Class V soils are not likely to erode but have other limitations, impracticable to remove, that limit their use largely to pasture, range, woodland, or wildlife.

Class VI soils have severe limitations that make them generally unsuited to cultivation and limit their use largely to pasture or range, woodland, or wildlife.

Class VII soils have very severe limitations that make them unsuited to cultivation and that restrict their use largely to pasture or range, woodland, or wildlife.

Class VIII soils and landforms have limitations that preclude their use for commercial plants and restrict their use to recreation, wildlife, water supply, or to esthetic purposes.

Capability subclasses are soil groups with one class; they are designated by adding a small letter--e, w, s, or c--to the class numeral, for example, IIe. The letter e shows that the main limitation is risk of erosion unless close-growing plant cover is maintained; w shows that water in or on the soil interferes with plant growth or cultivation (in some soils the wetness can be partly corrected by artificial drainage); s shows that the soil is limited mainly because it is shallow, drouthy, or stony; and c, used in only some parts of the United States, shows that the chief limitation is climate that is too hot, too cold, or too dry for production of many crops.

In Class I there are no subclasses because the soils of this class have few limitations. Class V can contain, at the most, only the subclasses indicated by w, s, and c because the soils in Class VI are subject to little or no erosion though they have other limitations that restrict their use largely to pasture, range, woodland, or recreation.

Capability classes and subclasses are given for both nonirrigated and irrigated conditions.

Yields are given for nonirrigated or irrigated conditions or both depending on the use of the particular soils. These are predicted average acre yields obtainable under a high level of management. A high level of management consists of farming practices that research, field trials, and experience indicate produce the highest net returns.

## X. WOODLAND SUITABILITY

This section deals with the potential productivity and management problems in the use of the soils for woodland production.

The species listed in the column for potential productivity of common trees is the one for which site index is given. Site index is an indication of potential productivity and is based on the average total height of the dominant and codominant trees in the stand at the age of 100 years.

Dominant and codominant Douglas-fir (coast) trees growing in a well-stocked stand on site class 1 soils will reach a height of 186 feet or more at the age of 100 years; those on site class 2 soils will reach heights of 156 to 185 feet; those on site class 3 soils, heights of 126 to 155 feet; those on site class 4 soils, heights of 96 to 125 feet; and those on site class 5 soils, heights of 95 feet or less.

Seven site classes are used for ponderosa pine. Site class 1 soils will reach a height of 113 feet or more at age of 100 years; those on site class 2 soils will reach heights of 99 to 112 feet; those on site class 3 soils, heights of 85 to 98 feet; those on site class 4 soils, heights of 71 to 84 feet; those on site class 5 soils, heights of 57 to 70 feet; those on site class 6 soils, heights of 43 to 56 feet; and those on site class 7 soils, heights of less than 43.

Douglas-fir (interior) growing on site class 1 soils will reach a height of 86 feet or more at the age of 50 years; those on site class 2 soils will reach heights of 76 to 85 feet; those on site class 3 soils, heights of 66 to 75 feet; those on site class 4 soils, heights of 56 to 65 feet; those on site class 5 soils, heights of 46 to 55 feet; those on site class 6 soils, heights of 36 to 45 feet; and those on site class 7 soils, heights less than 36 feet.<sup>1/</sup>

The mean site index is given for the listed species. It is based on field sampling.

The ordination symbol column gives a connotative symbol representing class and subclass. The first element in the ordination is a number that denotes potential productivity in terms of cubic meters of wood per hectare per year for the common tree species listed.<sup>2/</sup> Therefore, 16 means 16 cubic meters per hectare per year of wood is produced at the point where mean annual increment culminates. One cubic meter per hectare equals 14.3 cubic feet per acre. The second element is a letter expressing

<sup>1/</sup> Douglas-fir (interior) site index may also be given using the ponderosa pine growth curves.

<sup>2/</sup> Before March 31, 1982, this number was the site class as determined by site index.

selected soil properties associated with moderate or severe hazards or limitations in woodland use or management. Subclass R represents relief or slope steepness, subclass X represents stoniness or rockiness, subclass W represents excessive wetness, subclass T represents toxic substances, subclass D represents restricted rooting depth, subclass C represents clayey soils, subclass S represents sandy soils, subclass F represents fragmental or skeletal soils, and subclass A represents slight or no limitations. Subclass priorities are in the order listed above.

In the columns below management problems, the ratings used are slight, moderate, and severe.

The erosion hazard is based on the condition of the woodland following cutting or logging operations, or where the soil is exposed along roads, trails, or log-yarding areas.

Equipment limitations are a reflection of limitations in the use of equipment commonly employed in managing or harvesting of the tree crop. Major criteria are slope, rockiness, wetness, and texture.

Seedling mortality is the degree of expected loss of natural or planted tree seedlings as influenced by soil and topography.

Windthrow hazard is the degree of expected blowdown during periods of high wind and excessive soil wetness. It considers the soil characteristics that affect the development of tree roots and the ability of the soil to hold trees firmly.

Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover.

The woodland suitability section usually is not completed for soils primarily in cropland and those that do not produce commercial trees.

## XI. WINDBREAKS

This section deals with windbreak and shelterbelt plantings. The intent is to provide information on the tree species that are best suited for the particular soils. The height expected at 20 years of age is indicated for each species shown. In areas, where windbreaks are not normally needed, an entry of "none" is shown.

## XII. WILDLIFE HABITAT SUITABILITY

This section rates soils on their potential for producing various kinds of wildlife habitat. Soil suitability is one of the important factors necessary to produce desired populations of wildlife. Other

important factors, such as present land use and existing wildlife populations, require onsite investigation for their evaluation and are not considered here.

Each soil is rated for those habitat elements listed by columns, and from these ratings, each soil is rated for its suitability to produce various kinds of wildlife habitat--openland habitat, woodland wildlife habitat, wetland wildlife habitat, and rangeland wildlife habitat. Soils are rated for rangeland wildlife habitat only if native range plants are a dominant part of the natural plant community. They are rated for woodland wildlife habitat if trees are a dominant part of the natural plant community. Soils rated for woodland wildlife habitat usually are not rated for rangeland wildlife habitat and vice versa. Openland wildlife habitat includes cropland and pasture.

Levels of suitability are expressed in terms of good, fair, poor, and very poor.

The grain and seed and grass and legume columns have a close relationship to the Capability and Predicted Yields section. Wild herbaceous plants and shrubs columns have a close relationship to the Rangeland and Woodland Suitability sections. The hardwood trees and conifer plants columns have a close relationship to the Woodland Suitability section. However, dry soils in eastern Oregon that do not produce trees other than juniper may have no relationship to the Woodland Suitability section where these soils are irrigated.

### XIII. POTENTIAL NATIVE PLANT COMMUNITY (Rangeland or Forest Understory Vegetation)

Common plant name. Common names of the major plants (usually those that contribute more than 5 percent of the composition) in the potential (climax) plant community are listed.

Percentage composition is an approximate percentage or percentage range of total annual production, dry weight, that each plant contributes to the total potential (climax) production.

The potential production in pounds per acre dry weight is the approximate total annual production of all plants normally growing on the soil in climax condition. In favorable years production is significantly greater than average; in normal years production is a long-term average; and in unfavorable years production is below average.

XIV. TERMS AND DEFINITIONS OF RESTRICTIVE FEATURES  
USED ON "SPI" SHEETS

AREA RECLAIM	Borrow areas are difficult to reclaim, and revegetation and erosion control on these areas are extremely difficult.
CEMENTED PAN	Cemented pan too close to surface.
COMPLEX SLOPE	Short and irregular slopes. Planning and construction of terraces, diversions, and other water-control measures are difficult.
CUTBANKS CAVE	Walls of cuts are not stable. The soil sloughs easily.
DEEP TO WATER	Deep to permanent water table during dry season.
DEPTH TO ROCK	Bedrock is so near the surface that it affects specified use of the soil.
DROUGHTY	Soil holds too little water for plants during dry periods.
DUSTY	Soil particles detach easily and cause dust.
ERODES EASILY	Water erodes soil easily.
EXCESS FINES	The soil contains too much silt and clay for use as gravel or sand in construction.
EXCESS HUMUS	Too much organic matter.
EXCESS LIME	The amount of carbonates in the soil is so high that it restricts the growth of some plants.
EXCESS SALT	The amount of soluble salt in the soil is so high that it restricts the growth of most plants.
EXCESS SODIUM	Exchangeable sodium imparts poor physical properties that restrict the growth of plants.
FAST INTAKE	Water infiltrates rapidly into the soil.
FAVORABLE	Features of the soil are favorable for the intended use.
FLOODS	Soil flooded by moving water from stream overflow, runoff, or high tides.

FRAGILE	Soil easily damaged by use or disturbance.
FROST ACTION	Freezing and thawing may damage structures.
HARD TO PACK	Difficult to compact.
LARGE STONES	Rock fragments greater than 3 inches across affect the specified use.
LOW STRENGTH	The soil has inadequate strength to support loads.
NO WATER	Too deep to ground water.
NOT NEEDED	Practice not applicable.
PERCS SLOWLY	Water moves through the soil slowly, affecting the specified use.
PERMAFROST	The soil contains frozen layers throughout the year.
PIPING	The soil is susceptible to the formation of tunnels or pipelike cavities by moving water.
PITTING	The soil is susceptible to the formation of pits caused by the melting of ground ice when the plant cover is removed.
PONDING	Soil in closed depressions inundated by standing water that is removed only by percolation or evapotranspiration.
POOR OUTLETS	Surface or subsurface drainage outlets are difficult or expensive to install.
ROOTING DEPTH	A layer that greatly restricts the downward rooting of plants -- occurs at a shallow depth.
SALTY WATER	Water too salty for livestock consumption.
SEEPAGE	Water moves through the soil so quickly that it affects the specified use.
SHRINK-SWELL	The soil expands on wetting and shrinks on drying, which may cause damage to roads, dams, building foundations, or other structures.
SLIPPAGE	Soil mass is susceptible to movement downslope when loaded, excavated, or wet.
SLOPE	Slope too great.

SLOW INTAKE	Water infiltrates slowly into the soil.
SLOW REFILL	Ponds fill slowly because the permeability of the soil is restricted.
SMALL STONES	Rock fragments that are 3 inches or less across may affect the specified use.
SOIL BLOWING	Soil easily moved and deposited by wind.
SUBSIDES	Settlement of organic soils or of soils containing semifluid layers.
THIN LAYER	Suitable soil material is not thick enough for use as borrow material or topsoil.
TOO ACID	The soil is so acid that growth of plants is restricted.
TOO CLAYEY	Soil slippery and sticky when wet and slow to dry.
TOO SANDY	Soil soft and loose; droughty and low in fertility.
UNSTABLE FILL	Banks of fill are likely to cave in or slough or uneven settlement is likely.
WETNESS	Soil wet during period of use.

## XV. GLOSSARY

- AEROBIC -- Living or active only in the presence of oxygen. Pertaining to aerobic decomposition by aerobic microbes.
- ANIMAL UNIT MONTH -- The amount of forage it takes to support an animal unit (basically a cow with calf or the equivalent) for one month.
- CLIMAX PLANT COMMUNITY -- The one best adapted to the particular environment of the site.
- CODOMINANT TREES -- Trees with crowns forming the general level of the forest canopy and receiving full light from above but comparatively little from the sides; usually with medium-sized crowns more or less crowded on the sides.
- DOMINANT TREES -- Trees with crowns extending above the general level of the forest canopy and receiving full light from above and partly from the sides; larger than average trees in the stand, with crowns well-developed, possibly somewhat crowded on the sides.
- EVAPOTRANSPIRATION -- The sum of water removed by vegetation and that lost by evaporation for a particular area during a specified time.
- FIELD CAPACITY -- The moisture content of soil in the field 2 or 3 days after a thorough wetting of the soil profile by rain or irrigation water. Field capacity is expressed as moisture percentage, dry-weight basis.
- FRAGIPAN -- A dense, brittle subsurface horizon that restricts water movement and root penetration.
- FRAGMENTAL SOILS -- Soils with so many stones, cobbles, pebbles, or coarse sands that there are voids greater than 1 mm.
- HARDPAN -- A subsoil layer cemented by silica and/or carbonates that is very difficult to excavate and makes a nearly impenetrable barrier to roots and water.
- HORIZON--SOIL -- A layer of soil, approximately parallel to the land surface, that has distinct characteristics produced by soil-forming processes.
- INFILTRATION (RATE) -- The rate at which surface soil absorbs water.
- INORGANIC SILTS -- Silts formed from parent material of a mineral nature.

KEY SPECIES -- Those species that differentiate one range site from another.

LEACHATES -- Liquids that have percolated through a soil and that contain substances in solution or suspension.

MAJOR LAND RESOURCE AREA -- Consists of geographic areas of land with particular but broad patterns of soil, climate, water resources, land use and type of farming.

MMHO - MILLIMHO --  $\frac{1}{1000}$  of an mho which is a reciprocal ohm (ohm spelled backward). MHO is a unit of conductivity and ohm is a unit of resistivity.

MAPPING UNITS, SOIL -- Areas shown on a soil map.

ORGANIC SOIL -- A naturally wet soil that may or may not be artificially drained, with 20 to 30 percent or more of plant residues either with or without mineral soil components.

PROPERTIES, SOIL -- Any or all of the measurable physical or chemical characteristics of a soil such as color, texture, structure, reaction, or exchange capacity.

QUALITIES, SOIL -- Inferences made by interpreting soil properties, such as drainage class is inferred from soil mottling.

SATURATION EXTRACT -- The solution removed from a soil completely filled with liquid, at less than 1/3 atmosphere.

SERIES, SOIL -- Consists of soils that have profiles almost alike.

SHEAR STRENGTH -- Ability to resist sliding along internal surfaces within a mass.

SKELETAL SOILS -- Soils with 35 percent or more, by volume, of fragments greater than 2 mm.

SOIL SLIPPING -- The downhill movement of a mass of soil under wet or saturated conditions.

STANDARD DEVIATION -- This is a measure of the spread of values about their arithmetic mean. It indicates that 2/3 of the samples (values) vary this much from the mean.

STRUCTURE, SOIL -- The arrangement of primary soil particles into compound particles or clusters that are separated from adjoining aggregates and have properties unlike those of an equal mass of unaggregated primary soil particles.

TEXTURE, SOIL -- The relative proportions of sand, silt, and clay particles in a mass of soil.

TOPSOIL -- A presumed fertile soil or soil material, or one that responds to fertilization, ordinarily rich in organic matter, used to topdress roadbanks, lawns, and gardens.

UNIVERSAL SOIL LOSS EQUATION -- A computed soil loss based on rainfall, soil-erodibility, slope length, slope gradient, cropping management, and erosion control practices.

WATER TABLES (SEASONAL) --

Apparent - The periodic occurrence of the water table as indicated by soil characteristics such as mottles and/or concretions.

Artesian - Ground water that is confined between impermeable layers and forced toward the surface by pressure.

Perched - Water which is prevented from percolating through the soil by a restrictive layer, such as impermeable bedrock or hard pans, and is separated from the ground water by a relatively dry zone.

## ZONE CHANGE APPLICATION

Date Received: \_\_\_\_\_

Planner Initials: \_\_\_\_\_

Date Complete: \_\_\_\_\_

Planner Initials: \_\_\_\_\_

### Current Zoning

Comprehensive Plan Map Designation: FOREST

Zoning Designation: F.2 (80)

### Proposed Zoning

Comprehensive Plan Map Designation: FOREST- FARM

Zoning Designation: F.F (10)

Total Acreage to be Rezoned: 40.10

### FINDINGS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed change?
2. Describe how the original zoning was the product of a mistake; or
3. Establish that:
  - a. The rezoning will conform with the Comprehensive Plan (including but not limited to all applicable goals and policies); and,
    - Goal 1: Citizen Involvement
    - Goal 2: Land Use Planning
    - Goal 3: Agricultural Lands
    - Goal 4: Forest Lands
    - Goal 5: Open Spaces, Scenic and Historic Areas and Natural Resources
    - Goal 6: Air, Water and Land Resources Quality
    - Goal 7: Areas Subject to Natural Disasters and Hazards
    - Goal 8: Recreational Needs
    - Goal 9: Economy of the State
    - Goal 10: Housing
    - Goal 11: Public Facilities and Services
    - Goal 12: Transportation
    - Goal 13: Energy Conservation
    - Goal 14: Urbanization

- b. The site is suitable to the proposed zone (taking into consideration among other things slope, access, flooding, traffic, availability of public facilities and services, and impact to adjacent properties); and
  - c. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.
4. What effect would the proposed change have on surrounding properties? Include a description of the existing land uses within 1,000 feet of the proposed zone change.
  5. Is there a public need or demand to support this requested zone change? ☐ No ☐ Yes. If YES, please describe.
  6. Fire Safety. If converting Farm or Forest zoned land to a non-resource zone, include an analysis of how future division and residential development could meet fire safety standards.
  7. Any other information which may add to the viability of the request.

---

#### SITE INFORMATION

The following maps shall be required for a complete application:

**Zoning Map:** Show area of proposed re-zoning.

**Soils Map:** If converting Forest or Farm zoned land to a non-resource zone include a soils map. These are available at the Wasco County GIS Department or the Farm Services Agency.

**Site Plan Map for the area to be rezoned and lands within at least 1000' that includes the following:**

- ☐ North Arrow
- ☐ Scale
- ☐ Boundaries or properties proposed to be rezoned (dimensions)
- ☐ All waterways, wetlands, noticeable landforms and drainage of property
- ☐ Structures (including dwelling, accessory buildings, barns, walls and fences) with location and size
- ☐ Utilities (existing)
  - Electric/Communication corridors including poles
  - Septic tanks & drain fields (primary and reserve)/Wells and supply lines
- ☐ All points of ingress and egress (roads and driveways) and whether they are public or private with their length, width and surface type
- ☐ Significant terrain features and land forms including slopes over 20%

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Zone Change will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set. A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

## COMPREHENSIVE PLAN AMENDMENT

Date Received:	Planner Initials:	Date Complete:	Planner Initials:
<b>PROPOSED CHANGE</b>			

Indicate specific Comprehensive Plan section(s) or element(s) proposed to be amended or added:

Amend Comprehensive Plan to re-zone tax lot 2N 12E 22 4400 from F-2(80) to F-F(10)

---

---

---

---

### FINDS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed change?
2. A landowner or their representative may only initiate a quasi-judicial plan amendment. Describe how the proposal meets the standard of a quasi-judicial amendment and not a legislative amendment.

Quasi-Judicial revisions are those which do not have significant effect beyond the immediate area of the change, i.e., narrow in scope and focusing on specific situations.

Legislative revisions include land use changes that have widespread and significant impact beyond the immediate area such as quantitative changes producing large volumes of traffic; a qualitative change in the character of the land use itself, such as conversion of residential to industrial use; or a spatial change that affects large areas or much different ownership.

3. The amendment will be in compliance with the statewide land use goals as provided by the Land Conservation and Development Commission, where applicable and substantial proof that such change shall not be detrimental to the spirit and intent of such goals. These goals include:

Goal 1: Citizen Involvement  
Goal 2: Land Use Planning  
Goal 3: Agricultural Lands  
Goal 4: Forest Lands  
Goal 5: Open Spaces, Scenic and Historic Areas  
and Natural Resources  
Goal 6: Air, Water and Land Resources Quality  
Goal 7: Areas Subject to Natural Disasters and Hazards

Goal 8: Recreational Needs  
Goal 9: Economy of the State  
Goal 10: Housing  
Goal 11: Public Facilities and Services  
Goal 12: Transportation  
Goal 13: Energy Conservation  
Goal 14: Urbanization

4. Demonstrate there was a mistake in the original comprehensive plan or change in the character of the neighborhood.
  5. Address factors which relate to the public need for healthful, safe and aesthetic surrounding and conditions.
  6. Include proof of change in the inventories originally developed.
  7. Amendment shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established. Provide additional studies and established need to justify the amendment.
- A response (findings of fact) to each of the questions above has been submitted? ☐ No ☒ YES

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Comprehensive Plan Amendment will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set.

A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

## GOAL EXCEPTION APPLICATION

Date Received: \_\_\_\_\_ Planner Initials: \_\_\_\_\_ Date Complete: \_\_\_\_\_ Planner Initials: \_\_\_\_\_

### PROPOSED EXCEPTION

Indicate the Goal(s) for which the exception is requested:

Goal 4 - Forest Lands

### FINDINGS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed goal exception?
2. Is there a public need or demand to support this requested Goal Exception? ☐ No ☐ Yes. If YES, please describe.
3. An exception is a decision to exclude certain land from the requirements of one or more applicable statewide goals. Goal Exceptions fall into three categories: Physically Developed; Irrevocably Committed; and Reasons.

Indicate which type of goal exception is being proposed and include findings for the review criteria listed below and any additional referenced criteria. These are directly from Oregon Administrative Rule and are available at [http://arcweb.sos.state.or.us/rules/OARS\\_600/OAR\\_660/660\\_004.html](http://arcweb.sos.state.or.us/rules/OARS_600/OAR_660/660_004.html). Oregon Revised Statute criteria are available at <http://landru.leg.state.or.us/ors/>

a. Exception Requirements for Land Physically Developed to Other Uses

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**b. Exception Requirements for Land Irrevocably Committed to Other Uses**

- (1)** A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a)** A "committed exception" is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b)** For the purposes of this rule, an "exception area" is that area of land for which a "committed exception" is taken;
  - (c)** An "applicable goal," as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.
- (2)** Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:
  - (a)** The characteristics of the exception area;
  - (b)** The characteristics of the adjacent lands;
  - (c)** The relationship between the exception area and the lands adjacent to it; and
  - (d)** The other relevant factors set forth in OAR 660-004-0028(6).
- (3)** Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(1)(b), in Goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is "impossible." For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable:
  - (a)** Farm use as defined in ORS 215.203;
  - (b)** Propagation or harvesting of a forest product as specified in OAR 660-033-0120; and
  - (c)** Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).
- (4)** A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area.
- (5)** Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.
- (6)** Findings of fact for a committed exception shall address the following factors:
  - (a)** Existing adjacent uses;
  - (b)** Existing public facilities and services (water and sewer lines, etc.);
  - (c)** Parcel size and ownership patterns of the exception area and adjacent lands:
    - (i)** Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities) on the resulting parcels or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive commercial agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels;

- (ii) Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land's actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownerships are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.
  - (d) Neighborhood and regional characteristics;
  - (e) Natural or man-made features or other impediments separating the exception area from adjacent resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;
  - (f) Physical development according to OAR 660-004-0025; and
  - (g) Other relevant factors.
- (7) The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.
- (8) The requirement for a map or aerial photograph in section (7) of this rule only applies to the following committed exceptions:
  - (a) Those adopted or amended as required by a Continuance Order dated after the effective date of section (7) of this rule; and
  - (b) Those adopted or amended after the effective date of section (7) of this rule by a jurisdiction with an acknowledged comprehensive plan and land use regulations.
- c. Reasons Necessary to Justify an Exception Under Goal 2, Part II(c)  
 An exception Under Goal 2, Part II(c) can be taken for any use not allowed by the applicable goal(s). The types of reasons that may or may not be used to justify certain types of uses not allowed on resource lands are set forth in the following sections of this rule:
  - (1) For uses not specifically provided for in subsequent sections of this rule or in OAR 660-012-0070 or chapter 660, division 14, the reasons shall justify why the state policy embodied in the applicable goals should not apply. Such reasons include but are not limited to the following:
    - (a) There is a demonstrated need for the proposed use or activity, based on one or more of the requirements of Goals 3 to 19; and either
    - (b) A resource upon which the proposed use or activity is dependent can be reasonably obtained only at the proposed exception site and the use or activity requires a location near the resource. An exception based on this subsection must include an analysis of the market area to be served by the proposed use or activity. That analysis must demonstrate that the proposed exception site is the only one within that market area at which the resource depended upon can reasonably be obtained; or
    - (c) The proposed use or activity has special features or qualities that necessitate its location on or near the proposed exception site.
  - (2) Rural Residential Development: For rural residential development the reasons cannot be based on market demand for housing, except as provided for in this section of this rule, assumed continuation of past urban and rural population distributions, or housing types and cost characteristics. A county must show why, based on the economic analysis in the plan, there are reasons for the type and density of housing planned which require this particular location on resource lands. A jurisdiction could justify an exception to allow residential development on resource land outside an urban growth boundary by determining that the rural

location of the proposed residential development is necessary to satisfy the market demand for housing generated by existing or planned rural industrial, commercial, or other economic activity in the area.

- (3) Rural Industrial Development: For the siting of industrial development on resource land outside an urban growth boundary, appropriate reasons and facts include, but are not limited to, the following:
- (a) The use is significantly dependent upon a unique resource located on agricultural or forest land. Examples of such resources and resource sites include geothermal wells, mineral or aggregate deposits, water reservoirs, natural features, or river or ocean ports; or
  - (b) The use cannot be located inside an urban growth boundary due to impacts that are hazardous or incompatible in densely populated areas; or
  - (c) The use would have a significant comparative advantage due to its location (e.g., near existing industrial activity, an energy facility, or products available from other rural activities), which would benefit the county economy and cause only minimal loss of productive resource lands. Reasons for such a decision should include a discussion of the lost resource productivity and values in relation to the county's gain from the industrial use, and the specific transportation and resource advantages which support the decision.
- (4) Expansion of Unincorporated Communities: For the expansion of an Unincorporated Community defined under OAR 660-022-0010(10), appropriate reasons and facts include but are not limited to the following:
- (a) A demonstrated need for additional land in the community to accommodate a specific rural use based on Goals 3-19 and a demonstration that either:
    - (i) The use requires a location near a resource located on rural land; or
    - (ii) The use has special features necessitating its location in an expanded area of an existing unincorporated community, including:
      - (a) For industrial use, it would have a significant comparative advantage due to its location (i.e., near a rural energy facility, or near products available from other activities only in the surrounding area; or it is reliant on an existing work force in an existing unincorporated community);
      - (b) For residential use, the additional land is necessary to satisfy the need for additional housing in the community generated by existing industrial, commercial, or other economic activity in the surrounding area. The plan must include an economic analysis showing why the type and density of planned housing cannot be accommodated in an existing exception area or UGB, and is most appropriate at the particular proposed location. The reasons cannot be based on market demand for housing, nor on a projected continuation of past rural population distributions.
  - (b) Need must be coordinated and consistent with the comprehensive plan for other exception areas, unincorporated communities, and UGBs in the area. Area encompasses those communities, exception areas, and UGBs which may be affected by an expansion of a community boundary, taking into account market, economic, and other relevant factors;
  - (c) Expansion requires demonstrated ability to serve both the expanded area and any remaining infill development potential in the community at time of development with the level of facilities determined to be appropriate for the existing unincorporated community.
- (5) Expansion of Urban Unincorporated Communities: Expansion of an urban unincorporated community defined under OAR 660-022-0010(9) shall comply with OAR 660-022-0040.

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information pursuant to the attached instructions. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Goal Exception will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set.

A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

---

P:\Development Applications\GoalException.docx

Last Updated 7/13/2017

**TO:** WASCO COUNTY PLANNING COMMISSION

**FROM:** WASCO COUNTY PLANNING & ECONOMIC  
DEVELOPMENT OFFICE

**SUBJECT:** Request for Comprehensive Plan Amendment and Zone Change for a single 40  
acre parcel in the Sevenmile Hill Area Committed to Residential Use; Exception  
to Goal 4.

**HEARING DATE:**

**APPLICANT:** David Wilson

**NATURE OF REQUEST:**

The request is for:

- Amendment to the County's Comprehensive Plan and plan map establishing an exception to Goal 4, "Forest Lands," for Applicant's tax lot 4400 consisting of 40.10 acres; and
- A change in the zone designation of tax lot 4400 from F-2 (80) "Forest Use" to F-F (10) "Forest-Farm."

**RECOMMENDATION:** The Planning Office recommends that the Planning Commission approve the request for a zone change, comprehensive plan amendment, and exception as set forth below. The subject property is both physically developed and irrevocably committed to non-forest uses, because residential uses both on and surrounding the subject property make forest uses impracticable. The criteria for the requested zone and plan changes are met, as explained in this submittal and the attached Exhibits.

## BACKGROUND INFORMATION

### PROPERTY OWNERS:

This request is for tax lot 2N 12E 22 4400, owned by applicant David Wilson, as shown on the maps in Exhibit 1. Tax lot 4400 is a legally created lot of record, and is referred to in this submittal as the “subject property.”

### COMPREHENSIVE PLAN AND ZONING DESIGNATIONS:

The subject property is designated forest use on the comprehensive plan map and currently zoned F-2 (80) for forest use.

### PUBLIC FACILITIES AND SERVICES:

#### Transportation

The subject property lies south of Sevenmile Hill Road at the point where it intersects with Old Sevenmile Hill Road and Richard Road. At the point of the intersection of Sevenmile Hill Road and Dry Creek Road, and proceeding toward the northwest from the intersection, Sevenmile Hill Road becomes State Road. The primary access to the subject property is from Sevenmile Hill Road.

From the records of the Wasco County Road Department, State Road/Sevenmile Hill Road is a Functional Class RC Rural Major Collector with a 2009 ADT of 480 and a V/C Ratio of 0.01 [Data taken from Wasco County Transportation System Plan, 2009] The Planning Office prepared a memorandum to the County Court dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing. The TLSA memo listed a capacity for State Road/Sevenmile Hill Road of 1,500/day.

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use 210). The proposed zone change could potentially add 3 dwellings to the area's traffic load, producing 29 daily trips at maximum buildout. The addition of those trips to the existing ADT would result in 509 daily trips for the area. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of 3 dwellings would not cause the V/C ratio to rise above 0.5. Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the county used the ODOT mobility standard of 0.70 as a comparison figure. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

#### Water and Sewer

There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A

Geologic Survey was published in 1996 as part of the TLSA study (see below under general history and prior land use actions) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Appendix 4 to the TLSA -- Ground Water Evaluation and Background Materials ("Groundwater Study") at pages 12-13.)

The predominant source of water in this area is from wells, and there is a well on the subject property serving the existing residence and associated accessory buildings. The general conclusion of the Groundwater Study is that this area has capacity to support additional residential development. See additional findings below regarding the TLSA study.

There are no public sewer facilities available in the area. Each residence would be required to handle its own sewage as required by law. At the permitting stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

#### Electricity

Power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence and associated accessory buildings located on the subject property.

#### Fire Protection and Prevention

The subject property is within the Mid-Columbia Fire and Rescue District (Structural) and Oregon Department of Forestry (Wildfire). The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies.

### **GENERAL HISTORY AND PRIOR LAND USE ACTIONS:**

In 1993, Wasco County began work on the Transition Lands Study Area Project ("TLSA") in response to concerns about development in northern Wasco County, and particularly in the area surrounding the subject property, which area is known as the Sevenmile Hill area. The concerns included "availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area."

The first phase of the project was a groundwater study. The initial study was published in December 1996 as the "TLSA Ground Water Evaluation, Wasco County, Oregon" by Jervey Geological Consulting (The Groundwater Study"). On September 12, 1997, the final report for the

TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the subject property was rated "L/H," meaning that it scored low for Resource Values and high for Development Values.

The final Recommendation of the TLSA for the Sevenmile Hill area included:

- Retain the existing R-R(5) and A-1 (80) EFU zoning
- Retain the existing R-R(5) and A-1 (80) EFU zoning .
- Retain the existing F-F(10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F(10) lands to R-R(10). F-F(10) areas would be able to transfer development rights to the area identified as the test area.

As a result of the TLSA study, eight parcels of F-F(10) land in the Sevenmile Hill area north of the subject property were converted to R-R(10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). In recent years the County has approved single family dwellings that have subsequently been built on nearly every lot surrounding the subject property.

Additional detailed area history is contained in Section 2 of this submittal.

## **JUSTIFICATION FOR REQUEST:**

### **1. Wasco County Comprehensive Plan Revision Procedures and Standards.**

- 1.1. The Comprehensive Plan's "Definitions-Existing Land Use Map" identify the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield."
- 1.2. This request is to change the classification of the subject property on the planning map to "Forest-Farm:" "Purpose: To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge."

1.3. The following provisions apply and are addressed in the following sections.

1.4. Chapter 11 of the Comprehensive Plan establishes procedures and standards for revision of the plan and plan map. This request requires amendment of the text of the plan, to justify an exception to Goal 4, and an amendment to the plan map to designate the subject property for Forest-Farm (non-resource) uses.

1.5. Chapter 11 states that a comprehensive plan revision may be initiated by the property owner or his authorized representative. This amendment has been initiated by property owner David Wilson.

1.6. The proposal is quasi-judicial in character, and hearings in this matter are being conducted with quasi-judicial procedures and safeguards. Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615. (See attached Exhibit \_\_)

### **1.7. General Criteria for a Plan Amendment.**

Subsection H. of Chapter 11 of the comprehensive plan states:

“The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:

1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.
2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.
3. A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.
4. Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.
5. Proof of change in the inventories originally developed.
6. Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.”

**1.7.1** As set forth by the County Court in Exhibit B of the Big Muddy Ranch – Young Life Youth and Family Camp Exception (September 1997), these are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission need only consider these criteria and determine whether they are generally satisfied.

**1.7.2** The following findings demonstrate compliance with statewide land use planning goals that may apply to the request, as required by subsections 1 and 2 of the plan amendment general factors:

Goal 1 - Citizen Involvement. The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures. These proceedings are being conducted with notice and hearings with opportunity for public input as required by law and local ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable Plan and zoning ordinance provisions.

Goal 2 - Land Use Planning. The purpose of Goal 2 is “to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.” The County's planning process has been acknowledged as being in compliance with the goals, and was followed in consideration of the proposal. An adequate factual base is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal also complies with Goal 2 requirements for the adoption of exceptions to a statewide goal, in this case, Goal 4. The proposal complies with Goal 2.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses, although small scale (non-commercial) farm uses are possible in the area. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal; however small-scale farming activities possible in the area are promoted by the allowance of the proposal.

Goal 4 - Forest Lands. Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land. The intention of this proposal is to accurately reflect the nature of the subject property by changing the zoning to F-F(10). Because Goal 4 applies, and the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4. The exception is justified in part 2 of this narrative addressing LCDC's administrative rule requirements for “physically developed” and “irrevocably committed” exceptions.

Goal 5 -Open Spaces, Scenic and Historic Areas, and Natural Resources. Goal 5 is to protect natural resources and conserve scenic and historic areas and open spaces. The county zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the county. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 - Air, Water, and Land Resources Quality. Goal 6 is "To maintain and improve the quality of the air, water and land resources of the state." The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is "To protect people and property from natural hazards." Goal 7 calls for local governments to adopt measures "to reduce risk to people and property from natural hazards." The subject property is not within any of the areas identified as being subject to natural disaster. The proposal complies with Goal 7.

Goal 8 –Recreational Needs. Goal 8 is "To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts." If the zoning is changed to F-F(10), "Parks, playgrounds, hunting and fishing preserves and campgrounds" would be allowed as conditional uses within the exception area. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is "To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens." The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

Goal 10 – Housing. Goal 10 is "To provide for the housing needs of citizens of the state." The rule is directed to lands in urban and urbanizable areas. However, the proposal will allow development of additional homes in an area that is already built and irrevocably committed to residential uses. Consistent with Goal 10, the proposal will improve housing opportunities in an area where such uses are appropriate.

Goal 11 - Public Facilities and Services. Goal 11 is “To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.” In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as water and sewer services are not considered necessary or appropriate. Public roads are available and adequate. Local fire and police services are provided by Mid- Columbia Fire and Rescue Department and the Wasco County Sheriff's Office. Neither water nor sewer services are provided to the area, but both are available on the subject property through individual well and septic tank systems. Electric and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres) is less than the maximum density recommended by the TLSA study. The proposal complies with Goal 11.

Goal 12 - Transportation. Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The proposal will have little if any impact on the transportation system serving the subject property because there will be a minimal increase in traffic generated by development that might occur as a result of the plan amendment and zone change. Current estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.01. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads.

In connection with Goal 12, the County is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is in conformance with Goal 12 and the Goal 12 rule.

Goal 13 - Energy Conservation. Goal 13 is “To conserve energy.” Policy 3 directs the County to minimize energy consumption through the use of zoning and subdivision standards. In this case, Goal 13 is promoted by encouraging development near existing residential development and along established roads. The proposal conforms with and promotes Goal 13.

Goal 14 - Urbanization. Goal 14 is to “provide for an orderly and efficient transition from rural to urban land use.” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the

area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No decidedly “urban” services will be required to allow the maximum amount of development contemplated by this proposal. Water is available in the area in sufficient quantities to serve the proposed housing density (see Groundwater Evaluation). The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 do not apply.

**1.7.3** As noted above, subsection 3 of the County's plan revision factors requires consideration of whether: “A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.” As outlined in detail in the subsequent sections of this discussion, the subject property is the only parcel which touches Sevenmile Hill Road which is currently in resource zoning. The subject property is for all intents and purposes surrounded completely by residential development. It is not producing any marketable timber, and as outlined in the subsequent sections of this submittal, is unlikely to do so in the future. Comprehensive Plan Chapter 14 -- Findings and Recommendations outlines the anticipated uses for lands zoned F-2(80) as follows: “The ‘F-2 (40)’ and ‘F-2 (80)’ forest zones have very limited permitted uses and conditional uses that are generally compatible with primary timber management. Due to the high cost of these lands, the forty (40) and eighty (80) acre minimum lot sizes will be more than adequate to keep them in forest uses. Most of the lands zoned “F-2 (80)” is in either the Mt. Hood National Forest, White River Game Management Area or are private timber company holdings. These lands are adequately managed for forest, recreational and open space uses.”

Merriam-Webster's defines “mistake” as “to identify wrongly; confuse with another” or “a misunderstanding of the meaning or implication of something.” This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the subject property are more appropriate than the original designations. Based on the materials in this submittal, the County's original characterization of the area as most appropriate for commercial forest uses appears to have been incorrect. The area now appears not to be suitable for forestry uses, but to be more suitable for rural residential use. The TLSA study supports a conclusion that the original comprehensive plan was incorrect, and that the most appropriate zoning of the property is F-F(10), allowing for rural residences. The County's rezoning of several parcels north of Sevenmile Hill Road from F-F(10) to RR-10, allowing development of nonfarm or forest dwellings as uses permitted outright, also supports this conclusion. The approval of dwellings on, around, and immediately adjacent to the subject property also supports a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**1.7.4** As noted above, subsection 4 of the County's plan revision factors requires consideration of "Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions." This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses.

**1.7.5** As noted above, Subsection 5 of the County's plan revision factors requires consideration of "Proof of change in the inventories originally developed." The proof required by this section is provided by these findings, the attached exhibits, and testimony and evidence obtained by the County through the hearing process. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed on, and in close proximity to the subject property, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed-demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small scale farm and forest uses with limited density housing in a manner that is consistent with adjacent uses and which is compatible to those forest resource lands nearby.

**1.7.6** Subsection 6 of the County's plan revision factors states: "Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established." As described throughout these findings, the proposed revisions are based on the TLSA study, previous County land use decisions affecting the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits. These materials, and the County's plan, demonstrate that there is a public need for low-density rural residential uses and for small scale farm and forest uses in the county generally and in the Sevenmile Hill area. The justification for the particular change, addressed throughout these findings, is that the subject property is more properly designated for low density residential use than for commercial forestry uses. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

## **1.8 Transportation Planning Rule Compliance**

Subsection I. of Chapter 11 of the comprehensive plan states:

"1. Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule - "TPR"). 'Significant' means the proposal would:

a. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);

b. Change standards implementing a functional classification system; or

c. As measured at the end of the planning period identified in the adopted transportation system plan:

1. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

2. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or

3. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

2. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:

a. Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.

b. Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.

c. Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.

d. Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.

3. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance.”

**1.8.1** A separate Traffic Impact Analysis is not required for this proposal because there is not a “significant impact” under the TPR (OAR 660-12-0060(1)).

## 1.9 Procedures for a Plan Amendment.

Subsection J. of Chapter 11 of the Comprehensive Plan states, in relevant part:

1. A petition must be filed with the Planning Offices on forms prescribed by the Commission.
2. Notice of a proposed revision within, or to, the urban growth boundary will be given to the appropriate city at least thirty (30) days before the County public hearing.
3. Notification of Hearing:
  - 1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.
  - 2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.
  - 3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.
  - 4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.
  - 5) Upon receiving the Planning Commission's recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties."

These procedures and all other applicable statutory and local procedures have been or will be followed in consideration of the proposal.

## 2. Justification for Taking an Exception to Goal 4:

### 2.1 Introduction.

In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm, and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197.932(1) states, in relevant part:

"(1) A local government may adopt an exception to a goal if:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]

(b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;

\* \* \*

(4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (1) of this section have or have not been met.

(5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.

\* \* \*

(8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:

(a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;

(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and

(c) Complies with standards under subsection (1) of this section.”

**2.1.1** In like manner, Planning Goal 2, part II, states, in relevant part:

“A local government may adopt an exception to a goal when:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”

**2.1.2** Both the goal and the rule adopt the legislative definition of an exception with minor variation-subsection (c) is modified in the goal to state “Complies with standards for an exception” and in the rule to state “Complies with the provisions of this Division.” OAR 660-004-0010 states that the “process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” including: “Goal 4 Forest Lands.”

**2.1.3** Goal 4 provides that:

“Where a \* \* \* plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

**2.1.4** Rule definitions of “resource land” and “non-resource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be plan and zone designated for forest-farm uses, a rural residential, non-resource category of uses under the County's plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC's rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state's forest land base.

## 2.2 Exception Requirements for Land Physically Developed to Other Uses.

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

OAR 660-004-0025 states:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)
- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** The proposed exception area consists of a 40.10 acre piece identified as tax lot 4400 located in T2N, R12E, and in the southwestern quarter of Section 22 (the subject property). The north line of the subject property abuts Sevenmile Hill Road, and the northwest corner of the subject property is at the intersection of Sevenmile Hill Road and Old Sevenmile Hill Road. The subject property is rectangle measuring roughly 1,600 feet east/west and 1,500 north south. It is generally sloping downward to the north, with the northern boundary along Sevenmile Hill Road as the low point.

The subject property is improved with a log home with surrounding decks covering approximately 2,680 ft<sup>2</sup> and a 720 ft<sup>2</sup> basement located approximately halfway between the north and south boundaries and in the western one third of the property. A driveway serving the residence and properties to the south extends from the northwest corner of the subject property southward, generally paralleling the western boundary. There are two barns with stalls located generally east of the log home, each covering approximately 1,110 ft<sup>2</sup> for total coverage of 2,220 ft<sup>2</sup>.

Further east of the hay loft and barn there is an original home site with cabin covering 1,980 ft<sup>2</sup> located generally east of the log home. There is an old barn located south of the cabin covering 1,200 ft<sup>2</sup>.

The log home was built pursuant to a conditional use permit, the conditions of which required decommissioning the original cabin as a residential structure; however, the cabin legally exists and may be used for other uses consistent with the existing zoning.

A good portion of the southeastern portion of the subject property consists of a cleared area growing grass hay which previously served as a pasture for the cabin and now is baled each year. Most of the northern two thirds of the subject property has been cleared at some point in the past and remains clear at this time. There is no merchantable timber on the property, and the property has never supported merchantable timber. There are scrub oaks and pine trees growing on the southern portion and eastern boundary of the property. There are no fir trees of any size larger than a seedling on the property, and historically firs do not survive. Grasses and shrubs create moderately dense underbrush.

Soils on the subject property are Class 4, predominately 49C and 50D Wamic Loam, 5-12% slope. This soil type represents more gently sloping areas where the exposure is toward the north. On the subject property, this particular range of the soil class is characterized by smaller oak and scattered pine forest. These soils are suitable for dry farm small grain, grass hay, and pasture. The woodland site index designation of 70 for Ponderosa Pine indicates low productivity with no significant limitations or restrictions. This capability class is also designated under the pine-oak-fescue range and as such it is possible that it could be used for fruit orchards or other crops. In its uncultivated state, however, special management is required to reduce oak and shrub growth that will curtail stabilizing plant growth beneath what amounts to a thin, mainly pine canopy.

The area has no history of crop use with the exception of grass hay grown the pasture area. Due to the terrain and rocky soil, and because the elevation creates climatic extremes, crop agriculture is uneconomical and otherwise impracticable.

The subject property does not have a history of commercially successful grazing for sheep or cattle. Grazing was occasionally tried in the area in the 1940's, but the terrain, thin soil and climate have limited the activities to an occasional attempt rather than a sustained commercial success. There are no properties in the immediate area being used for commercial grazing.

Although the soils on the subject property could, at first glance, appear to indicate a potential for agricultural use, particularly small-scale orchards, that potential is severely reduced due to climatic conditions. The subject property is in current use for a residence, along with pasture and wildlife habitat in the scrub oak section. It has never been successfully utilized for agricultural purposes and has very limited value as forestland due to the dwellings on the site. The soils indicate low timber productivity. There are no productive orchards or other agricultural uses in the area immediately surrounding the subject property.

The residential development surrounding the subject property has occurred mainly in proximity to Sevenmile Hill Road that runs along the northern boundary of the subject property. Because of this development and ownership pattern, and because of the small average and odd shaped lot sizes, it would be impracticable to manage any of the property in the area as a commercial forestry operation or as part of such an operation.

## 2.3 Exception Requirements for Land Irrevocably Committed to Other Uses.

OAR 660-004-0028 contains standards for adoption of an “irrevocably committed” exception.

### 2.3.1 OAR 660-004-0028(1) provides:

- (1) “A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;
  - (c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.

**FINDING:** The subject property contains a legal residence, and is surrounded on 2 sides by small residential tracts, and by a residence to the south. The subject property is irrevocably committed to non-resource use. All of the large forested tracts currently producing merchantable timber are located well south of the subject property, and adopting this exception for the subject property will not negatively impact those uses.

### 2.3.2 OAR 660-004-0028(2) provides: “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:

- (a) The characteristics of the exception area;”

**FINDING:** The characteristics of the subject property are fully discussed in the findings above in response to OAR 660-004-0025 (Physically Developed).

### 2.3.3 (b) “the characteristics of the adjacent lands;”

#### **FINDING:**

In general, the areas to the East and North of the subject property have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the three subdivisions in the immediate area of the subject parcel, two were platted in the early part of the 20th century, and the third in 1979 (Fairmont Orchard Tracts-1911;

Sunnydale Orchards-1912; Flyby Night Subdivision-1979). The majority of the lots in these subdivisions are approximately 5 acres in size. The County has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Specific adjacent lands analysis is as follows:

**East:** Directly to the east of and abutting the subject parcel are two parcels zoned F-F(10): T2N R12E, Section 22, Lots 4300 and 4200. Both of these lots have residences.

Properties further east along Wits End Drive and Sevenmile High South Road are zoned R-R(10) and all have residences (tax lots 3600, 3400, 3800, 3900, 4000). These properties average approximately 5 acres in size and are part of the Fairmont Orchard Tracts subdivision which was platted in 1911.

**North:** To the north of the subject property across Sevenmile Hill Road is a lot zoned R-R(5), Tax Lot 4600 (7.35 ac.), and a small lot owned by Wasco County (Tax Lot 4500, .7 acres). 4600 has a residence. Tax Lot 4700 meets the subject property on its northeast corner, is zoned F-F(10), and has a residence.

Properties north of the subject property lying along Richard Road are small acreages zoned R-R(5), all with residences.

All of the area north of the subject property is built and committed to low and medium density rural residential uses. There are two platted subdivisions: Sunnydale Orchards, platted in 1912, and Flyby Night, platted 1979.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less than ten acres each. The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions. The zoning for the Flyby Night subdivision is R-R(5).

The areas to the north and east are the most heavily developed areas surrounding the subject property. As can be seen by the maps in Exhibits 1, virtually all lots to the north and east of the subject property have been improved with a residence or a manufactured home.

The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

**West:** Tax lot 2N 10E 21 900, which abuts the west property line of the subject parcel, is split zoned, with the northern portion which abuts Sevenmile Hill Road zoned F-F(10) and the southern portion zoned F-2(80). The southern portion has not been commercially logged, and is slowly being cleared. Tax Lot 2900, a 439 acre parcel, abuts the southwest portion and corner of the subject property and is zoned F-2(80). It has a residence located on the western portion along Osburn Cutoff Road. This property has a creek running generally north-south which forms a clear line of demarcation between the more vibrant, productive land to the west and the scrubrier soils to the east. The land west of the creek supports the growth of Douglas Fir trees; the land to the east is predominantly scrub oak and pine similar to the subject property. The commercial logging on this piece has been confined to the area west of the creek.

In general, the parcels to the west of the subject property lying both north and south of and abutting Sevenmile Hill Road consist of small acreages zoned F-F(10), almost all improved with residences.

The subject property is the only parcel which touches Sevenmile Hill Road which is zoned F-2(80). The only other parcels similarly zoned which touch any road are large, unimproved parcels located well west of the subject property which lie south of and touch Dry Creek Road or which lie along Osburn Cutoff Road.

**South:** Tax lot 2N 10E 22 4100 abutting the subject property to the south is zoned F-2(80). It is owned by the owner of the subject property, and has a legal residence, and together with tax lot 2800 to the south, also in common ownership, comprises approximately 70 acres. It is not used for timber production. This parcel is transected by the BPA Bonneville-The Dalles power line right-of-way/easement, which forms a natural boundary between this parcel and the larger, commercially forested tracts to the south.

**Soils:** The subject property soils are 49C and 50D Wamic Loam. The parcels immediately north of the subject property are generally 51D Wamic Loam soils. Adjacent properties to the south and east are 49C and 50D, like the subject property. (See soils maps and productivity indices) 49C and 50D soils both have a site index of 70 for Ponderosa Pine, indicating a potential yield of 20-49 cubic feet per acre. However, with the exception of the 439 acre parcel adjoining the southwest corner of the subject property, none of the adjacent properties are supporting commercial timber production, and logging on the 439 acre parcel takes place west of the creek which runs parallel to the common boundary. All commercial timber production occurs well south of the subject property, generally south of the BPA power line transecting the area. The subject property has never produced merchantable timber or been logged commercially.

#### 2.3.4 (c) The relationship between the exception area and the lands adjacent to it;

**FINDING:** As described in the preceding sections of this submittal, the subject property is surrounded on two sides by residential lots in the F-F(10), R-R(10), and R-R(5) zones. None of

these zones are resource zones. The subject property also has a residence located on the parcel immediately south of it; and even the large resource zoned tract abutting the southwest corner of the subject property is improved with a residence, although it is located some distance from the subject property. Thus, the subject parcel has residences surrounding it on all 4 sides, non-resource zoning designations on parcels abutting it on 3 sides, and intensive residential development on parcels abutting on 2 sides.

In general, all of the properties which adjoin Sevenmile Hill Road are committed to residential development and uses and are zoned accordingly. The subject parcel stands out as an anomaly in this pattern. Particularly in light of the fact that the subject property is already improved with a residence, the F-F(10) designation is far more consistent with the uses of adjacent lands than the F-2(80) designation. There is no evidence, historically or recently, that the subject property is or could be used for commercial timber production, and attempting to do so now would inevitably lead to conflicts with the immediately adjacent residential uses. Looking at the existing zoning map, it is clear that the large forestry designations are intentionally and more properly sited well away from the residential development which lies along a rural arterial road such as Sevenmile Hill.

**2.3.5 (d)** The other relevant factors set forth in OAR 660-004-0028(6).

**FINDING:** These factors are discussed in the following sections.

**2.3.6** OAR 660-004-0028(3) provides: “Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is ‘impossible.’ For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

- (a) Farm use as defined in ORS 215.203;
- (b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;
- (c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).”

In turn, ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other

agricultural or horticultural use or animal husbandry or any combination thereof. "Farm use" includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. "Farm use" also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. "Farm use" also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. "Farm use" includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. "Farm use" does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including "farm use" and "propagation or harvesting of a forest product," and OAR 660-006-0025(2)(a) states:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

**FINDING:** The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means "not capable of being carried out in practice." Webster's New World Dictionary, 2nd College Edition, 1980. Capable means "having ability" or "able to do things well." Id. Finally, "in practice" means by the usual method, custom or convention. Id. Webster's Third New International Dictionary, (unabridged ed., 1993) defines "impracticable" as "1a : not practicable : incapable of being performed or accomplished by the means employed or at command : INFEASIBLE \* \* \* c : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*"

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice on the subject parcel. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Using the area for commercial agricultural or forestry uses—in a manner capable of generating a profit or return from those activities—is not practicable on the subject parcel for all of the reasons stated in this submittal. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

A definition of "forest products" can be found in ORS 532.010(4), which states that forest products are "any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores."

The current level of residential development has increased to the point that commercial resource use has become impracticable. The subject property is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that compete with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The effects of these conflicts and impacts from residential uses combined with the long cycle for trees to reach maturity (100-125 years) make commercial forestry and commercial agriculture impracticable at this location. As explained throughout this submittal, residential development abutting and in close proximity to the subject property, coupled with the relatively small size of the subject property and local topography and climate, supports a conclusion that there is an inadequate buffer between the subject property and nearby rural residences. The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable.

To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the lack of suitability of the area for farm uses. The soils in the area are not generally suitable for farm use, nor is the climate conducive to those uses. At no time has the County considered the subject parcel to be farmland or to be suitable for farming, and at no time in the history of the area has farming taken place. Due to the existing parcelization, soils, climate and development in the area, it cannot be, and is not currently employed for the primary purpose of obtaining a profit from agricultural uses. The history of the area also supports this conclusion. At best, the area can support the small-scale, "peripheral" farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

- 2.3.7** OAR 660-004-0028(4) provides: "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."

**FINDING:** This submittal, including this statement and all attached exhibits, addresses all applicable factors and reasons why, in this case, the facts support the conclusion that uses allowed by Goals 3 and 4 are impracticable in the exception area. See especially, the immediately preceding sections of this submittal, and sections addressing section (6) of the rule, below.

- 2.3.8** OAR 660-004-0028(5) provides: "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared

for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.”

**FINDING:** As discussed elsewhere in this submittal, the subject property includes a legal residence, other buildings, and associated physical development. The presence of the dwelling, and of the other dwellings immediately adjacent to the subject property, each contribute to the irrevocable commitment of the area to rural residential uses, and the impracticability of using the area for farm or forest uses.

**2.3.9** OAR 660-004-0028(6) provides: Findings of fact for a committed exception shall address the following factors:

**2.3.9.1** (a) Existing adjacent uses;

**FINDING:** The existing adjacent uses are discussed and considered in great detail in the sections above. Existing adjacent uses to the West, North and East are all residential.

**2.3.9.2** (b) Existing public facilities and services (water and sewer lines, etc.);

**FINDING:** There are no public water or sewer facilities on the subject property. An existing well provides water to the dwelling. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities.

**2.3.9.3** “(c) Parcel size and ownership patterns of the exception area and adjacent lands:

(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”

**FINDING:** As discussed in great detail above and in the attached exhibits, the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the subject

property were not successful because of the cold and dry weather at this location and elevation. Virtually all of the existing lots have been developed and now have non-resource residences located on them. Only two parcels in the immediate area were created via exceptions to the goals: 7.35 acres located at 6955 Sevenmile Hill Road (Comprehensive Plan Amendment from F-2(40) to Rural Residential, CPA 89-104, October, 1989); and 9.87 acres located at the intersection of Sevenmile Hill Road and Sevenmile High Hill Road (Comprehensive Plan Amendment from FF-10 to Rural Residential, CPA 90-101, June 1990). Neither of these goal exception parcels are pivotal to the analysis of parcel size and ownership patterns in the immediate area. As noted, the local parcelization occurred long before the development of the goals, and the parcels created by that process have now been almost entirely developed.

(B) "Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land's actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations."

**FINDING:** This provision is not applicable to this single parcel proposal; however, ownership patterns in the general area are discussed in detail in preceding sections of this narrative addressing OAR 660-004-0028(2)(a)-(c). The parcels are clustered along roads serving the area, as is the subject property, and virtually all parcels in the area are in separate ownerships. This parcelization pre-dates the adoption of the county zoning ordinance and comprehensive plan.

#### 2.3.9.4 "(d) Neighborhood and regional characteristics;"

**FINDING:** Based on the descriptions already provided in this submittal, the neighborhood and regional characteristics can best be described as non-resource, small acreage rural residential development clustered along Sevenmile Hill Road. Considering these characteristics, the current designation of the subject property as the only resource designated property touching Sevenmile Hill Road stands out as an anomaly. The exception will serve to make the subject property more conforming with existing neighborhood and regional characteristics.

2.3.9.5 "(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;"

**FINDING:** In general, the BPA Bonneville-The Dalles power line right-of-way/easement, which transects the local area south of the subject property, serves to separate the more residential areas

to the north from the commercial forest areas to the south. As noted, most of the residential development lies in the immediate area along Sevenmile Hill Road, with most of the commercial forest areas lying well to the south and being served by secondary or primitive roads.

**2.3.9.6** (f) “Physical development according to OAR 660-004-0025.” OAR 660-004-0025 sets forth the “Exception Requirements for Land Physically Developed to Other Uses” as follows:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.”

**FINDING:** Part of the justification for this exception is that the subject property is already physically developed with a dwelling, outbuildings, and associated access roads and other infrastructure. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is approximately 40 acres.

**2.3.9.7** “(g) Other relevant factors;”

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

**2.3.10** OAR 660-004-0028(7) provides: The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.

**FINDING:** The submittal complies with this requirement, and includes current maps as Exhibit 1 showing the subject property and adjoining lands.

**2.3.11** OAR 660-004-0040 concerns the:

“Application of Goal 14 Urbanization to Rural Residential Areas,” the purpose of which: “is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.”

Subsections -0040(1) through (3) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in OAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in OAR 660-004-0040.

**2.3.11.1** Although it is not entirely clear, OAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning to be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

**2.3.11.2** OAR 660-004-0040(4) and (5) provide:

“(4) The rural residential areas described in Subsection (2)(a) of this rule are rural lands. Division and development of such lands are subject to Statewide Planning Goal 14, Urbanization which prohibits urban use of rural lands.

(5)(a) A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres.

(b) A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone's minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.

(c) For purposes of this section, 'rural residential zone currently in effect' means a zone applied to a rural residential area, in effect on the effective date of this rule, and acknowledged to comply with the statewide planning goals."

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

**2.3.11.3 OAR 660-004-0040(6) and (7) provide:**

"(6) After October 4, 2000, a local government's requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division."

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

"(7)(a) The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule."

**FINDING:** The underlying zone will prevent the creation of any new lot or parcel in the subject property smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

(b) Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area. For purposes of this rule, that minimum area shall be referred to as the minimum lot size.

**FINDING:** The minimum lot size proposed is ten acres.

(c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.

**FINDING:** As stated, the minimum lot size of the underlying zone is currently ten acres, and that minimum lot size will apply on the subject property area.

(d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.

**FINDING:** As stated, the County's land use regulations do not specify a minimum lot size smaller than two acres.

(e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (7)(e)(A) through (7)(e)(H) are met:

\*\*\*\*\*

**FINDING:** The current proposal does not include a Planned Unit Development.

(f) Except as provided in subsection (e) of this section, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle."

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed rural residential area.

(g) In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(32) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule's requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.

**FINDING:** The current proposal does not include a mobile home park or manufactured dwelling park.

(h) A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:

(A) The parcel to be divided has two or more permanent habitable dwellings on it;

(B) The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;

(C) Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;

(D) The partition would not create any vacant parcels on which a new dwelling could be established.

(E) For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).

**FINDING:** Because the County is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

(i) For rural residential areas designated after the effective date of this rule, the affected county shall either:

(A) Require that any new lot or parcel have an area of at least ten acres, or

(B) Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'"

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one dwelling for every ten acres.

### **3. Justification for a Zone Change:**

#### **3.1 Zoning Ordinance - Chapter 9:**

Chapter 9 of the Wasco County Land Use and Development Ordinance (zoning ordinance), entitled "Zone Change and Ordinance Amendment," includes standards and procedures for zone changes. Section 9.010 states:

"Application for a zone change may be initiated as follows:

\*\*\*\*\*

C. By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the [Director of Planning]<sup>1</sup> to establish the criteria for the change (quasi-judicial only);"

---

<sup>1</sup> Missing text in published version of Section 9.010.

As indicated previously, this zone change was initiated by property owner David Wilson. Planning staff is presenting the proposal with a recommendation for approval.

### **3.2 Zoning Ordinance - Section 9.020**

Section 9.020, entitled “Criteria for Decision,” provides as follows:

“The Approving Authority may grant a zone change only if the following circumstances are found to exist:

- A. The original zoning was the product of a mistake; or
- B. It is established that
  1. The rezoning will conform with the Comprehensive Plan; and,
  2. The site is suitable to the proposed zone;
  3. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.”

**3.2.1** This request is for a plan amendment and an exception to Goal 4. The previous section of this discussion establishes that the current F-2(80) zoning can be considered a mistake given the location and characteristics of the subject property and its relationship to surrounding residential uses.

**3.2.2.** This narrative and the attached exhibits also establish that the requirements of subsection B. have been met: B(1) is met because the Comprehensive Plan is being amended specifically to support the proposed zoning designation; B(2) is met because the site is suitable to the proposed F-F(10) zone; and B(3) is met because through this zone change application and process there has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.

**3.2.3.** The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by section B(1):

#### Goal 1 - Citizen Involvement.

The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities in its Comprehensive Plan and the zoning ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable

plan and zoning ordinance provisions with opportunity for public input and by the public hearings required as part of this application and process.

#### Goal 2 – Land Use Planning.

The County's land use planning goal requires that procedures be established and followed to ensure public participation in land use decision making, and that there is an “adequate factual base” for land use decisions. All applicable procedures have or will be complied with in the consideration of this proposal. These findings and the record of this proceeding are a more than adequate factual base for the decision.

#### Goal 3 - Agricultural Lands.

Goal 3 provides for the preservation of Agricultural Lands for farm use. There are no Goal 3 designated Agricultural Lands on the subject property and Goal 3 therefore does not apply.

#### Goal 4 -- Forest Lands.

Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land, but is not now in timber production and has not historically been in timber production. As discussed in the preceding sections of this discussion, the subject property is not generally suitable for commercial forestry due to its development and use as residential property; its proximity to other residential properties; and its soil characteristics and historic uses. The proposal is to redesignate the property for rural residential uses, which will not have any impact on lands actually being used for commercial forestry.

#### Goal 5 - Open Spaces, Scenic and Historic Areas and Natural Resources.

The County zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the County. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

#### Goal 6 - Air, Land and Water Quality.

Goal 6 is “To maintain and improve the quality of the air, water and land resources of the state.” The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

#### Goal 7 -- Areas Subject to Natural Disasters and Hazards.

The subject property is not within any areas identified by the County as Natural Hazard Areas.

### Goal 8 -Recreational Needs.

Goal 8 is “To satisfy the recreational needs of the citizens of Wasco County and visitors.” None of the policies of Goal 8 apply to the proposal.

### Goal 9 -- Economy of the State.

Goal 9 is “To diversify and improve the economy of Wasco County.” The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

### Goal 10 -- Housing.

Goal 10 is “To provide for the housing needs of the citizens of Wasco County.” There is an ongoing need for developable rural residential lots, and corresponding pressure on resource lands to fill that need. The proposed zone change helps to ameliorate that pressure by creating potential rural residential lots while having no impact on lands actually in forest production.

### Goal 11 -- Public Facilities and Services.

Goal 11 is to “plan and develop a timely, orderly, and efficient arrangement of public facilities and services to provide a framework for urban and rural development.” The existing services and facilities in the area of the subject property are adequate for the proposal. The subject property adjoins Sevenmile Hill Road. Local fire and police services are provided by the rural fire protection district and the sheriff s office. Neither water nor sewer services are provided to the subject property, but are available on the subject property through individual well(s) and septic tank systems.

### Goal 12-Transportation.

Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The goal does not have approval standards, and is otherwise implemented through County transportation planning. The proposal will have little if any impact on the transportation system serving the subject property because there will be minimal increase in traffic generated by development that might occur as a result of the zone change. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. In connection with Goal 12, the County is required to apply the Transportation Planning Rule located in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires amendments to comprehensive plans that “significantly affect a transportation facility...assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” Sevenmile Hill/State Road

is classified as a Rural Major Collector, which is consistent with the level of traffic from the rural residential uses that feed into it.

### Goal 13 - Energy Conservation.

This Goal is met by application of development standards contained in the zoning ordinance.

### Goal 14-Urbanization.

The level of existing development and possible development does not constitute “urban use.” Goal 14 does not, therefore, apply. It should be noted, however, that Policy 3 of Goal 14 encourages “subdivisions to be developed by a planned development approach, maximizing physical design, the retention of open space and reducing adverse impacts. The proposed zone change for the subject property is consistent with that policy.

**3.2.5** Subsection B(2) of zoning ordinance section 9.020 requires that the site be shown to be “suitable to the proposed use.” The proposed zone would allow, outright, farm and forest uses and dwellings on parcels of at least ten acres in conjunction with farm or forest uses. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”

**3.2.5..1.** The Forest-Farm zone is not a resource zone. (See October 11, 1995 non-resource determination letter Exhibit WC-Q, Betzing Record). In this case, it is the most suitable designation for the subject property, which has been physically developed and entirely committed to nonresource use due to its location in close proximity to major county rural residential areas. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

**3.2.5..2.** The history of the area is also relevant to addressing this standard. As discussed in the Irrevocably Committed section of this discussion, the extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of the surrounding area to non-resource, rural residential uses. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and

increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable.

**3.2.6** Subsection B(3) of zoning ordinance section 9.020 requires, prior to approval of a zone change, that it be established that “There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.” The exhibits and record of this proceeding support a finding of compliance with this requirement. This requirement for rezoning has been met.

### **3.3 Zoning Ordinance – Section 9.030**

Section 9.030 requires review of the proposed action to determine whether it significantly affects a transportation facility. As discussed in Section 1.8, the proposed zone change will not significantly affect a transportation facility.

### **3.4 Zoning Ordinance – Section 9.040**

Section 9.040 allows for the imposition of such reasonable conditions “as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance.” The Section lists without limitation eight general categories of areas which may be conditioned to achieve the desired compatibility. Because the minimum lot size in the proposed zone change is 10 acres, because the uses surrounding the subject property are almost entirely rural residential, and because any future development will require compliance with applicable building and development standards, no conditions are necessary as part of this application to ensure the compatibility of the subject property to the surrounding uses.

### **3.5 Zoning Ordinance – Section 9.060 – 9.080**

Sections 9.060 through 9.080 require that the Planning Commission hold a hearing on the proposed zone change and make a recommendation to the County Board of Commissioners, which shall then take such action as it deems appropriate no sooner than twenty days after receipt of the Planning Commission’s recommendation.

## **CONCLUSION**

Because of the unique circumstances of the relationship between the subject property and surrounding land as explained above, the proposed residential uses will not commit adjacent or nearby resource land to nonresource use. The rural residential uses allowed are compatible with nearby resource use. Based upon all of the findings of fact and conclusions of law set forth above, the Planning Director recommends approval of the exception and zone change and recommends that the subject property be rezoned to F-F(10), and that the corresponding Plan, map and ordinance changes be made.

**TO:** WASCO COUNTY PLANNING COMMISSION

**FROM:** WASCO COUNTY PLANNING & ECONOMIC  
DEVELOPMENT OFFICE

**SUBJECT:** Request for Comprehensive Plan Amendment and Zone Change for a single 40  
acre parcel in the Sevenmile Hill Area Committed to Residential Use; Exception  
to Goal 4.

**HEARING DATE:**

**APPLICANT:** David Wilson

**NATURE OF REQUEST:**

The request is for:

- Amendment to the County's Comprehensive Plan and plan map establishing an exception to Goal 4, "Forest Lands," for Applicant's tax lot 4400 consisting of 40.10 acres; and
- A change in the zone designation of tax lot 4400 from F-2 (80) "Forest Use" to F-F (10) "Forest-Farm."

**RECOMMENDATION:** The Planning Office recommends that the Planning Commission approve the request for a zone change, comprehensive plan amendment, and exception as set forth below. The subject property is both physically developed and irrevocably committed to non-forest uses, because residential uses both on and surrounding the subject property make forest uses impracticable. The criteria for the requested zone and plan changes are met, as explained in this submittal and the attached Exhibits.

## BACKGROUND INFORMATION

### PROPERTY OWNERS:

This request is for tax lot 2N 12E 22 4400, owned by applicant David Wilson, as shown on the maps in Exhibit 1. Tax lot 4400 is a legally created lot of record, and is referred to in this submittal as the “subject property.”

### COMPREHENSIVE PLAN AND ZONING DESIGNATIONS:

The subject property is designated forest use on the comprehensive plan map and currently zoned F-2 (80) for forest use.

### PUBLIC FACILITIES AND SERVICES:

#### Transportation

The subject property lies south of Sevenmile Hill Road at the point where it intersects with Old Sevenmile Hill Road and Richard Road. At the point of the intersection of Sevenmile Hill Road and Dry Creek Road, and proceeding toward the northwest from the intersection, Sevenmile Hill Road becomes State Road. The primary access to the subject property is from Sevenmile Hill Road.

From the records of the Wasco County Road Department, State Road/Sevenmile Hill Road is a Functional Class RC Rural Major Collector with a 2009 ADT of 480 and a V/C Ratio of 0.01 [Data taken from Wasco County Transportation System Plan, 2009] The Planning Office prepared a memorandum to the County Court dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing. The TLSA memo listed a capacity for State Road/Sevenmile Hill Road of 1,500/day.

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use 210). The proposed zone change could potentially add 3 dwellings to the area's traffic load, producing 29 daily trips at maximum buildout. The addition of those trips to the existing ADT would result in 509 daily trips for the area. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of 3 dwellings would not cause the V/C ratio to rise above 0.5. Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the county used the ODOT mobility standard of 0.70 as a comparison figure. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

#### Water and Sewer

There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A

Geologic Survey was published in 1996 as part of the TLISA study (see below under general history and prior land use actions) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Appendix 4 to the TLISA -- Ground Water Evaluation and Background Materials ("Groundwater Study") at pages 12-13.)

The predominant source of water in this area is from wells. There are two wells on the subject property (see Well Reports WASC 003131, WASC 003111, & WASC 003105). Yields are 50 & 60 GPM. There is also a well located on applicant's property to the south of the subject property yielding 35 GPM (see Well Report WASC 1609). The wells on the subject property have the capacity to support additional residential development, and the yields of all wells indicate adequate groundwater supply in the area. See additional findings below regarding the TLISA study.

There are no public sewer facilities available in the area. Each residence would be required to handle its own sewage as required by law. At the permitting stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

#### Electricity

Power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence and associated accessory buildings located on the subject property.

#### Fire Protection and Prevention

The subject property is within the Mid-Columbia Fire and Rescue District (Structural) and Oregon Department of Forestry (Wildfire). The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies.

### **GENERAL HISTORY AND PRIOR LAND USE ACTIONS:**

In 1993, Wasco County began work on the Transition Lands Study Area Project ("TLISA") in response to concerns about development in northern Wasco County, and particularly in the area surrounding the subject property, which area is known as the Sevenmile Hill area. The concerns included "availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area."

The first phase of the project was a groundwater study. The initial study was published in December 1996 as the "TLSA Ground Water Evaluation, Wasco County, Oregon" by Jervey Geological Consulting (The Groundwater Study"). On September 12, 1997, the final report for the TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the subject property was rated "L/H," meaning that it scored low for Resource Values and high for Development Values.

The final Recommendation of the TLSA for the Sevenmile Hill area included:

- Retain the existing R-R(5) and A-1 (80) EFU zoning
- Retain the existing R-R(5) and A-1 (80) EFU zoning .
- Retain the existing F-F(10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F(10) lands to R-R(10). F-F(10) areas would be able to transfer development rights to the area identified as the test area.

As a result of the TLSA study, eight parcels of F-F(10) land in the Sevenmile Hill area north of the subject property were converted to R-R(10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). In recent years the County has approved single family dwellings that have subsequently been built on nearly every lot surrounding the subject property.

Additional detailed area history is contained in Section 2 of this submittal.

## **JUSTIFICATION FOR REQUEST:**

### **1. Wasco County Comprehensive Plan Revision Procedures and Standards.**

1.1. The Comprehensive Plan's "Definitions-Existing Land Use Map" identify the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield."

1.2. This request is to change the classification of the subject property on the planning map to "Forest-Farm:" "Purpose: To provide for the continuation of forest and farm

uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge.”

**1.3.** The following provisions apply and are addressed in the following sections.

**1.4.** Chapter 11 of the Comprehensive Plan establishes procedures and standards for revision of the plan and plan map. This request requires amendment of the text of the plan, to justify an exception to Goal 4, and an amendment to the plan map to designate the subject property for Forest-Farm (non-resource) uses.

**1.5.** Chapter 11 states that a comprehensive plan revision may be initiated by the property owner or his authorized representative. This amendment has been initiated by property owner David Wilson.

**1.6.** The proposal is quasi-judicial in character, and hearings in this matter are being conducted with quasi-judicial procedures and safeguards. Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615. (See attached Exhibit \_\_\_\_\_)

**1.7. General Criteria for a Plan Amendment.**

Subsection H. of Chapter 11 of the comprehensive plan states:

“The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:

1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.
2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.
3. A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.
4. Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.
5. Proof of change in the inventories originally developed.

6. Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.”

**1.7.1** As set forth by the County Court in Exhibit B of the Big Muddy Ranch – Young Life Youth and Family Camp Exception (September 1997), these are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission need only consider these criteria and determine whether they are generally satisfied.

**1.7.2** The following findings demonstrate compliance with statewide land use planning goals that may apply to the request, as required by subsections 1 and 2 of the plan amendment general factors:

Goal 1 - Citizen Involvement. The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures. These proceedings are being conducted with notice and hearings with opportunity for public input as required by law and local ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable Plan and zoning ordinance provisions.

Goal 2 - Land Use Planning. The purpose of Goal 2 is “to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.” The County's planning process has been acknowledged as being in compliance with the goals, and was followed in consideration of the proposal. An adequate factual base is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal also complies with Goal 2 requirements for the adoption of exceptions to a statewide goal, in this case, Goal 4. The proposal complies with Goal 2.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses, although small scale (non-commercial) farm uses are possible in the area. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal; however small-scale farming activities possible in the area are promoted by the allowance of the proposal.

Goal 4 - Forest Lands. Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land. The intention of this proposal is to accurately reflect the nature of the subject property by changing the zoning to F-F(10). Because Goal 4 applies, and the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4. The exception

is justified in part 2 of this narrative addressing LCDC's administrative rule requirements for “physically developed” and “irrevocably committed” exceptions.

Goal 5 -Open Spaces, Scenic and Historic Areas, and Natural Resources. Goal 5 is to protect natural resources and conserve scenic and historic areas and open spaces. The county zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the county. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 - Air, Water, and Land Resources Quality. Goal 6 is “To maintain and improve the quality of the air, water and land resources of the state.” The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is “To protect people and property from natural hazards.” Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The subject property is not within any of the areas identified as being subject to natural disaster. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is “To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.” If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is “To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens.” The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

Goal 10 – Housing. Goal 10 is “To provide for the housing needs of citizens of the state.” The rule is directed to lands in urban and urbanizable areas. However, the proposal will allow development of additional homes in an area that is already built

and irrevocably committed to residential uses. Consistent with Goal 10, the proposal will improve housing opportunities in an area where such uses are appropriate.

Goal 11 - Public Facilities and Services. Goal 11 is “To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.” In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as water and sewer services are not considered necessary or appropriate. Public roads are available and adequate. Local fire and police services are provided by Mid-Columbia Fire and Rescue Department and the Wasco County Sheriff's Office. Neither water nor sewer services are provided to the area, but both are available on the subject property through individual well and septic tank systems. Electric and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres) is less than the maximum density recommended by the TLSA study. The proposal complies with Goal 11.

Goal 12 - Transportation. Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The proposal will have little if any impact on the transportation system serving the subject property because there will be a minimal increase in traffic generated by development that might occur as a result of the plan amendment and zone change. Current estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.01. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads.

In connection with Goal 12, the County is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is in conformance with Goal 12 and the Goal 12 rule.

Goal 13 - Energy Conservation. Goal 13 is “To conserve energy.” Policy 3 directs the County to minimize energy consumption through the use of zoning and subdivision standards. In this case, Goal 13 is promoted by encouraging development near existing residential development and along established roads. The proposal conforms with and promotes Goal 13.

Goal 14 - Urbanization. Goal 14 is to “provide for an orderly and efficient transition from rural to urban land use.” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No decidedly “urban” services will be required to allow the maximum amount of development contemplated by this proposal. Water is available in the area in sufficient quantities to serve the proposed housing density (see Groundwater Evaluation). The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 do not apply.

**1.7.3** As noted above, subsection 3 of the County's plan revision factors requires consideration of whether: “A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.” As outlined in detail in the subsequent sections of this discussion, the subject property is the only parcel which touches Sevenmile Hill Road which is currently in resource zoning. The subject property is for all intents and purposes surrounded completely by residential development. It is not producing any marketable timber, and as outlined in the subsequent sections of this submittal, is unlikely to do so in the future. Comprehensive Plan Chapter 14 -- Findings and Recommendations outlines the anticipated uses for lands zoned F-2(80) as follows: “The ‘F-2 (40)’ and ‘F-2 (80)’ forest zones have very limited permitted uses and conditional uses that are generally compatible with primary timber management. Due to the high cost of these lands, the forty (40) and eighty (80) acre minimum lot sizes will be more than adequate to keep them in forest uses. Most of the lands zoned “F-2 (80)” is in either the Mt. Hood National Forest, White River Game Management Area or are private timber company holdings. These lands are adequately managed for forest, recreational and open space uses.”

Merriam-Webster's defines “mistake” as “to identify wrongly; confuse with another” or “a misunderstanding of the meaning or implication of something.” This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the subject property are more appropriate than the original designations. Based on the materials in this submittal, the County's original characterization of the area as most appropriate for commercial forest uses appears to have been incorrect. The area now appears not to be suitable for forestry uses, but to be more suitable for rural residential use. The TLSA study supports a conclusion that the original comprehensive plan was incorrect, and that the most

appropriate zoning of the property is F-F(10), allowing for rural residences. The County's rezoning of several parcels north of Sevenmile Hill Road from F-F(10) to RR-10, allowing development of nonfarm or forest dwellings as uses permitted outright, also supports this conclusion. The approval of dwellings on, around, and immediately adjacent to the subject property also supports a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**1.7.4** As noted above, subsection 4 of the County's plan revision factors requires consideration of "Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions." This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses.

**1.7.5** As noted above, Subsection 5 of the County's plan revision factors requires consideration of "Proof of change in the inventories originally developed." The proof required by this section is provided by these findings, the attached exhibits, and testimony and evidence obtained by the County through the hearing process. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed on, and in close proximity to the subject property, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed-demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small scale farm and forest uses with limited density housing in a manner that is consistent with adjacent uses and which is compatible to those forest resource lands nearby.

**1.7.6** Subsection 6 of the County's plan revision factors states: "Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established." As described throughout these findings, the proposed revisions are based on the TLSA study, previous County land use decisions affecting the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits. These materials, and the County's plan, demonstrate that there is a public need for low-density rural residential uses and for small scale farm and forest uses in the county generally and in the Sevenmile Hill area. The justification for the particular change, addressed throughout these findings, is that the subject property is more properly designated for low density residential use than for commercial forestry uses. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

## **1.8 Transportation Planning Rule Compliance**

Subsection I. of Chapter 11 of the comprehensive plan states:

“1. Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule - “TPR”). 'Significant' means the proposal would:

a. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);

b. Change standards implementing a functional classification system; or

c. As measured at the end of the planning period identified in the adopted transportation system plan:

1. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

2. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or

3. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

2. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:

a. Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.

b. Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.

c. Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.

d. Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.

3. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance.”

**1.8.1** A separate Traffic Impact Analysis is not required for this proposal because there is not a “significant impact” under the TPR (OAR 660-12-0060(1)).

## **1.9 Procedures for a Plan Amendment.**

Subsection J. of Chapter 11 of the Comprehensive Plan states, in relevant part:

1. A petition must be filed with the Planning Offices on forms prescribed by the Commission.
2. Notice of a proposed revision within, or to, the urban growth boundary will be given to the appropriate city at least thirty (30) days before the County public hearing.
3. Notification of Hearing:
  - 1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.
  - 2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.
  - 3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.
  - 4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.
  - 5) Upon receiving the Planning Commission's recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties."

These procedures and all other applicable statutory and local procedures have been or will be followed in consideration of the proposal.

## 2. Justification for Taking an Exception to Goal 4:

### 2.1 Introduction.

In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm, and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197.932(1) states, in relevant part:

"(1) A local government may adopt an exception to a goal if:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]

(b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;

\* \* \*

(4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (1) of this section have or have not been met.

(5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.

\* \* \*

(8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:

(a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;

(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and

(c) Complies with standards under subsection (1) of this section.”

**2.1.1** In like manner, Planning Goal 2, part II, states, in relevant part:

“A local government may adopt an exception to a goal when:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”

**2.1.2** Both the goal and the rule adopt the legislative definition of an exception with minor variation-subsection (c) is modified in the goal to state “Complies with standards for an exception” and in the rule to state “Complies with the provisions of this Division.” OAR 660-004-0010 states that the “process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” including: “Goal 4 'Forest Lands.’”

**2.1.3** Goal 4 provides that:

“Where a \* \* \* plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

**2.1.4** Rule definitions of “resource land” and “non-resource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be plan and zone designated for forest-farm uses, a rural residential, non-resource category of uses under the County's plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC's rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state's forest land base.

## 2.2 Exception Requirements for Land Physically Developed to Other Uses.

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

OAR 660-004-0025 states:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)
- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** The proposed exception area consists of a 40.10 acre piece identified as tax lot 4400 located in T2N, R12E, and in the southwestern quarter of Section 22 (the subject property). The north line of the subject property abuts Sevenmile Hill Road, and the northwest corner of the subject property is at the intersection of Sevenmile Hill Road and Old Sevenmile Hill Road. The subject property is rectangle measuring roughly 1,600 feet east/west and 1,500 feet north/south. It is generally sloping downward to the north, with the northern boundary along Sevenmile Hill Road as the low point.

The subject property is improved with a log home with surrounding decks covering approximately 2,680 ft<sup>2</sup> and a 720 ft<sup>2</sup> basement located approximately halfway between the north and south boundaries and in the western one third of the property. A driveway serving the residence and properties to the south extends from the northwest corner of the subject property southward, generally paralleling the western boundary. There are two barns with stalls located generally east of the log home, each covering approximately 1,110 ft<sup>2</sup> for total coverage of 2,220 ft<sup>2</sup>.

Further east of the hay loft and barn there is an original home site with cabin covering 1,980 ft<sup>2</sup> located generally east of the log home. There is an old barn located south of the cabin covering 1,200 ft<sup>2</sup>.

The log home was built pursuant to a conditional use permit, the conditions of which required decommissioning the original cabin as a residential structure; however, the cabin legally exists and may be used for other uses consistent with the existing zoning.

A good portion of the southeastern portion of the subject property consists of a cleared area growing grass hay which previously served as a pasture for the cabin and now is baled each year. Most of the northern two thirds of the subject property has been cleared at some point in the past and remains clear at this time. There is no merchantable timber on the property, and the property has never supported merchantable timber. There are scrub oaks and pine trees growing on the southern portion and eastern boundary of the property. There are no fir trees of any size larger than a seedling on the property, and historically firs do not survive. Grasses and shrubs create moderately dense underbrush.

Soils on the subject property are Class 4, predominately 49C and 50D Wamic Loam, 5-12% slope. This soil type represents more gently sloping areas where the exposure is toward the north. On the subject property, this particular range of the soil class is characterized by smaller oak and scattered pine forest. These soils are suitable for dry farm small grain, grass hay, and pasture. The woodland site index designation of 70 for Ponderosa Pine indicates low productivity with no significant limitations or restrictions. This capability class is also designated under the pine-oak-fescue range and as such it is possible that it could be used for fruit orchards or other crops. In its uncultivated state, however, special management is required to reduce oak and shrub growth that will curtail stabilizing plant growth beneath what amounts to a thin, mainly pine canopy.

The area has no history of crop use with the exception of grass hay grown the pasture area. Due to the terrain and rocky soil, and because the elevation creates climatic extremes, crop agriculture is uneconomical and otherwise impracticable.

The subject property does not have a history of commercially successful grazing for sheep or cattle. Grazing was occasionally tried in the area in the 1940's, but the terrain, thin soil and climate have limited the activities to an occasional attempt rather than a sustained commercial success. There are no properties in the immediate area being used for commercial grazing.

Although the soils on the subject property could, at first glance, appear to indicate a potential for agricultural use, particularly small-scale orchards, that potential is severely reduced due to climatic conditions. The subject property is in current use for a residence, along with pasture and wildlife habitat in the scrub oak section. It has never been successfully utilized for agricultural purposes and has very limited value as forestland due to the dwellings on the site. The soils indicate low timber productivity. There are no productive orchards or other commercial agricultural uses in the area immediately surrounding the subject property.

The residential development surrounding the subject property has occurred mainly in proximity to Sevenmile Hill Road that runs along the northern boundary of the subject property. Because of this development and ownership pattern, and because of the small average and odd shaped lot

sizes, it would be impracticable to manage any of the property in the area as a commercial forestry operation or as part of such an operation.

## **2.3 Exception Requirements for Land Irrevocably Committed to Other Uses.**

OAR 660-004-0028 contains standards for adoption of an “irrevocably committed” exception.

### **2.3.1 OAR 660-004-0028(1) provides:**

- (1) “A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;
  - (c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.

**FINDING:** The subject property contains a legal residence, and is surrounded on 2 sides by small residential tracts, and by a residence to the south. The subject property is irrevocably committed to non-resource use. All of the large forested tracts currently producing merchantable timber are located well south of the subject property, and adopting this exception for the subject property will not negatively impact those uses.

### **2.3.2 OAR 660-004-0028(2) provides: “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:**

- (a) The characteristics of the exception area;”

**FINDING:** The characteristics of the subject property are fully discussed in the findings above in response to OAR 660-004-0025 (Physically Developed).

### **2.3.3 (b) “the characteristics of the adjacent lands;”**

### **FINDING:**

In general, the areas to the East and North of the subject property have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the

parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the three subdivisions in the immediate area of the subject parcel, two were platted in the early part of the 20th century, and the third in 1979 (Fairmont Orchard Tracts-1911; Sunnydale Orchards-1912; Flyby Night Subdivision-1979). The majority of the lots in these subdivisions are approximately 5 acres in size. The County has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Specific adjacent lands analysis is as follows:

**East:** Directly to the east of and abutting the subject parcel are two parcels zoned F-F(10): T2N R12E, Section 22, Lots 4300 and 4200. Both of these lots have residences.

Properties further east along Wits End Drive and Sevenmile High South Road are zoned R-R(10) and all have residences (tax lots 3600, 3400, 3800, 3900, 4000). These properties average approximately 5 acres in size and are part of the Fairmont Orchard Tracts subdivision which was platted in 1911.

**North:** To the north of the subject property across Sevenmile Hill Road is a lot zoned R-R(5), Tax Lot 4600 (7.35 ac.), and a small lot owned by Wasco County (Tax Lot 4500, .7 acres). 4600 has a residence. Tax Lot 4700 meets the subject property on its northeast corner, is zoned F-F(10), and has a residence.

Properties north of the subject property lying along Richard Road are small acreages zoned R-R(5), all with residences.

All of the area north of the subject property is built and committed to low and medium density rural residential uses. There are two platted subdivisions: Sunnydale Orchards, platted in 1912, and Flyby Night, platted 1979.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less than ten acres each. The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions. The zoning for the Flyby Night subdivision is R-R(5).

The areas to the north and east are the most heavily developed areas surrounding the subject property. As can be seen by the maps in Exhibits 1, virtually all lots to the north and east of the subject property have been improved with a residence or a manufactured home.

The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

**West:** Tax lot 2N 10E 21 900, which abuts the west property line of the subject parcel, is split zoned, with the northern portion which abuts Sevenmile Hill Road zoned F-F(10) and the southern portion zoned F-2(80). The southern portion has not been commercially logged, and is slowly being cleared. Tax Lot 2900, a 439 acre parcel, abuts the southwest portion and corner of the subject property and is zoned F-2(80). It has a residence located on the western portion along Osburn Cutoff Road. This property has a creek running generally north-south which forms a clear line of demarcation between the more vibrant, productive land to the west and the scrubrier soils to the east. The land west of the creek supports the growth of Douglas Fir trees; the land to the east is predominantly scrub oak and pine similar to the subject property. The commercial logging on this piece has been confined to the area west of the creek.

In general, the parcels to the west of the subject property lying both north and south of and abutting Sevenmile Hill Road consist of small acreages zoned F-F(10), almost all improved with residences.

The subject property is the only parcel which touches Sevenmile Hill Road which is zoned F-2(80). The only other parcels similarly zoned which touch any road are large, unimproved parcels located well west of the subject property which lie south of and touch Dry Creek Road or which lie along Osburn Cutoff Road.

**South:** Tax lot 2N 10E 22 4100 abutting the subject property to the south is zoned F-2(80). It is owned by the owner of the subject property, and has a legal residence, and together with tax lot 2800 to the south, also in common ownership, comprises approximately 70 acres. It is not used for timber production. This parcel is transected by the BPA Bonneville-The Dalles power line right-of-way/easement, which forms a natural boundary between this parcel and the larger, commercially forested tracts to the south.

**Soils:** The subject property soils are 49C and 50D Wamic Loam. The parcels immediately north of the subject property are generally 51D Wamic Loam soils. Adjacent properties to the south and east are 49C and 50D, like the subject property. (See soils maps and productivity indices) 49C and 50D soils both have a site index of 70 for Ponderosa Pine, indicating a potential yield of 20-49 cubic feet per acre. However, with the exception of the 439 acre parcel adjoining the southwest corner of the subject property, none of the adjacent properties are supporting commercial timber production, and logging on the 439 acre parcel takes place west of the creek which runs parallel to the common boundary. All commercial timber production occurs well south of the subject property, generally south of the BPA power line transecting the

area. The subject property has never produced merchantable timber or been logged commercially.

**2.3.4 (c)** The relationship between the exception area and the lands adjacent to it;

**FINDING:** As described in the preceding sections of this submittal, the subject property is surrounded on two sides by residential lots in the F-F(10), R-R(10), and R-R(5) zones. None of these zones are resource zones. The subject property also has a residence located on the parcel immediately south of it; and even the large resource zoned tract abutting the southwest corner of the subject property is improved with a residence, although it is located some distance from the subject property. Thus, the subject parcel has residences surrounding it on all 4 sides, non-resource zoning designations on parcels abutting it on 3 sides, and intensive residential development on parcels abutting on 2 sides.

In general, all of the properties which adjoin Sevenmile Hill Road are committed to residential development and uses and are zoned accordingly. The subject parcel stands out as an anomaly in this pattern. Particularly in light of the fact that the subject property is already improved with a residence, the F-F(10) designation is far more consistent with the uses of adjacent lands than the F-2(80) designation. There is no evidence, historically or recently, that the subject property is or could be used for commercial timber production, and attempting to do so now would inevitably lead to conflicts with the immediately adjacent residential uses. Looking at the existing zoning map, it is clear that the large forestry designations are intentionally and more properly sited well away from the residential development which lies along a rural arterial road such as Sevenmile Hill.

**2.3.5 (d)** The other relevant factors set forth in OAR 660-004-0028(6).

**FINDING:** These factors are discussed in the following sections.

**2.3.6** OAR 660-004-0028(3) provides: “Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is ‘impossible.’ For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

(a) Farm use as defined in ORS 215.203;

(b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;

(c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).”

In turn, ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. “Farm use” includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. “Farm use” also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. “Farm use” also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. “Farm use” includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. “Farm use” does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including “farm use” and “propagation or harvesting of a forest product,” and OAR 660-006-0025(2)(a) states:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

**FINDING:** The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means “not capable of being carried out in practice.” Webster’s New World Dictionary, 2nd College Edition, 1980. Capable means “having ability” or “able to do things well.” Id. Finally, “in practice” means by the usual method, custom or convention. Id. Webster’s Third New International Dictionary, (unabridged ed., 1993) defines “impracticable” as “**1a** : not practicable : incapable of being performed or accomplished by the means employed or at command : INFEASIBLE \* \* \* **c** : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*”

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice on the subject

parcel. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Using the area for commercial agricultural or forestry uses—in a manner capable of generating a profit or return from those activities—is not practicable on the subject parcel for all of the reasons stated in this submittal. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

A definition of “forest products” can be found in ORS 532.010(4), which states that forest products are “any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores.”

The current level of residential development has increased to the point that commercial resource use has become impracticable. The subject property is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that compete with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The effects of these conflicts and impacts from residential uses combined with the long cycle for trees to reach maturity (100-125 years) make commercial forestry and commercial agriculture impracticable at this location. As explained throughout this submittal, residential development abutting and in close proximity to the subject property, coupled with the relatively small size of the subject property and local topography and climate, supports a conclusion that there is an inadequate buffer between the subject property and nearby rural residences. The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable.

To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the lack of suitability of the area for farm uses. The soils in the area are not generally suitable for farm use, nor is the climate conducive to those uses. At no time has the County considered the subject parcel to be farmland or to be suitable for farming, and at no time in the history of the area has farming taken place. Due to the existing parcelization, soils, climate and development in the area, it cannot be, and is not currently employed for the primary purpose of obtaining a profit from agricultural uses. The history of the area also supports this conclusion. At best, the area can support the small-scale, “peripheral” farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

- 2.3.7** OAR 660-004-0028(4) provides: “A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons

explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area.”

**FINDING:** This submittal, including this statement and all attached exhibits, addresses all applicable factors and reasons why, in this case, the facts support the conclusion that uses allowed by Goals 3 and 4 are impracticable in the exception area. See especially, the immediately preceding sections of this submittal, and sections addressing section (6) of the rule, below.

**2.3.8** OAR 660-004-0028(5) provides: “Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.”

**FINDING:** As discussed elsewhere in this submittal, the subject property includes a legal residence, other buildings, and associated physical development. The presence of the dwelling, and of the other dwellings immediately adjacent to the subject property, each contribute to the irrevocable commitment of the area to rural residential uses, and the impracticability of using the area for farm or forest uses.

**2.3.9** OAR 660-004-0028(6) provides: Findings of fact for a committed exception shall address the following factors:

**2.3.9.1** (a) Existing adjacent uses;

**FINDING:** The existing adjacent uses are discussed and considered in great detail in the sections above. Existing adjacent uses to the West, North and East are all residential.

**2.3.9.2** (b) Existing public facilities and services (water and sewer lines, etc.);

**FINDING:** There are no public water or sewer facilities on the subject property. An existing well provides water to the dwelling. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities.

**2.3.9.3** “(c) Parcel size and ownership patterns of the exception area and adjacent lands:

(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be

irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”

**FINDING:** As discussed in great detail above and in the attached exhibits, the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the subject property were not successful because of the cold and dry weather at this location and elevation. Virtually all of the existing lots have been developed and now have non-resource residences located on them. Only two parcels in the immediate area were created via exceptions to the goals: 7.35 acres located at 6955 Sevenmile Hill Road (Comprehensive Plan Amendment from F-2(40) to Rural Residential, CPA 89-104, October, 1989); and 9.87 acres located at the intersection of Sevenmile Hill Road and Sevenmile High Hill Road (Comprehensive Plan Amendment from FF-10 to Rural Residential, CPA 90-101, June 1990). Neither of these goal exception parcels are pivotal to the analysis of parcel size and ownership patterns in the immediate area. As noted, the local parcelization occurred long before the development of the goals, and the parcels created by that process have now been almost entirely developed.

(B) “Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land’s actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.”

**FINDING:** This provision is not applicable to this single parcel proposal; however, ownership patterns in the general area are discussed in detail in preceding sections of this narrative addressing OAR 660-004-0028(2)(a)-(c). The parcels are clustered along roads serving the area, as is the subject property, and virtually all parcels in the area are in separate ownerships. This parcelization pre-dates the adoption of the county zoning ordinance and comprehensive plan.

#### 2.3.9.4 “(d) Neighborhood and regional characteristics;”

**FINDING:** Based on the descriptions already provided in this submittal, the neighborhood and regional characteristics can best be described as non-resource, small acreage rural residential development clustered along Sevenmile Hill Road. Considering these characteristics, the current

designation of the subject property as the only resource designated property touching Sevenmile Hill Road stands out as an anomaly. The exception will serve to make the subject property more conforming with existing neighborhood and regional characteristics.

2.3.9.5 “(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;”

**FINDING:** In general, the BPA Bonneville-The Dalles power line right-of-way/easement, which transects the local area south of the subject property, serves to separate the more residential areas to the north from the commercial forest areas to the south. As noted, most of the residential development lies in the immediate area along Sevenmile Hill Road, with most of the commercial forest areas lying well to the south and being served by secondary or primitive roads.

2.3.9.6 (f) “Physical development according to OAR 660-004-0025.” OAR 660-004-0025 sets forth the “Exception Requirements for Land Physically Developed to Other Uses” as follows:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.”

**FINDING:** Part of the justification for this exception is that the subject property is already physically developed with a dwelling, outbuildings, and associated access roads and other infrastructure. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is approximately 40 acres.

2.3.9.7 “(g) Other relevant factors;”

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

**2.3.10** OAR 660-004-0028(7) provides: The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.

**FINDING:** The submittal complies with this requirement, and includes current maps as Exhibit 1 showing the subject property and adjoining lands.

**2.3.11** OAR 660-004-0040 concerns the:

“Application of Goal 14 Urbanization to Rural Residential Areas,” the purpose of which: “is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.”

Subsections -0040(1) through (3) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in OAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in OAR 660-004-0040.

**2.3.11.1** Although it is not entirely clear, OAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning to be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

**2.3.11.2** OAR 660-004-0040(4) and (5) provide:

“(4) The rural residential areas described in Subsection (2)(a) of this rule are rural lands. Division and development of such lands are subject to Statewide Planning Goal 14, Urbanization which prohibits urban use of rural lands.

(5)(a) A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres.

(b) A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone's minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.

(c) For purposes of this section, 'rural residential zone currently in effect' means a zone applied to a rural residential area, in effect on the effective date of this rule, and acknowledged to comply with the statewide planning goals."

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

**2.3.11.3** OAR 660-004-0040(6) and (7) provide:

"(6) After October 4, 2000, a local government's requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division."

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

"(7)(a) The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule."

**FINDING:** The underlying zone will prevent the creation of any new lot or parcel in the subject property smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

(b) Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area. For purposes of this rule, that minimum area shall be referred to as the minimum lot size.

**FINDING:** The minimum lot size proposed is ten acres.

(c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.

**FINDING:** As stated, the minimum lot size of the underlying zone is currently ten acres, and that minimum lot size will apply on the subject property area.

(d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.

**FINDING:** As stated, the County's land use regulations do not specify a minimum lot size smaller than two acres.

(e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (7)(e)(A) through (7)(e)(H) are met:

\*\*\*\*\*

**FINDING:** The current proposal does not include a Planned Unit Development.

(f) Except as provided in subsection (e) of this section, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle."

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed rural residential area.

(g) In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(32) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule's requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.

**FINDING:** The current proposal does not include a mobile home park or manufactured dwelling park.

(h) A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:

(A) The parcel to be divided has two or more permanent habitable dwellings on it;

(B) The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;

(C) Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;

(D) The partition would not create any vacant parcels on which a new dwelling could be established.

(E) For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).

**FINDING:** Because the County is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

(i) For rural residential areas designated after the effective date of this rule, the affected county shall either:

(A) Require that any new lot or parcel have an area of at least ten acres, or

(B) Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'"

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one dwelling for every ten acres.

### **3. Justification for a Zone Change:**

#### **3.1 Zoning Ordinance - Chapter 9:**

Chapter 9 of the Wasco County Land Use and Development Ordinance (zoning ordinance), entitled "Zone Change and Ordinance Amendment," includes standards and procedures for zone changes. Section 9.010 states:

“Application for a zone change may be initiated as follows:

\*\*\*\*\*

C. By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the [Director of Planning]<sup>1</sup> to establish the criteria for the change (quasi-judicial only);”

As indicated previously, this zone change was initiated by property owner David Wilson. Planning staff is presenting the proposal with a recommendation for approval.

### **3.2 Zoning Ordinance - Section 9.020**

Section 9.020, entitled “Criteria for Decision,” provides as follows:

“The Approving Authority may grant a zone change only if the following circumstances are found to exist:

- A. The original zoning was the product of a mistake; or
- B. It is established that
  - 1. The rezoning will conform with the Comprehensive Plan; and,
  - 2. The site is suitable to the proposed zone;
  - 3. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.”

**3.2.1** This request is for a plan amendment and an exception to Goal 4. The previous section of this discussion establishes that the current F-2(80) zoning can be considered a mistake given the location and characteristics of the subject property and its relationship to surrounding residential uses.

**3.2.2.** This narrative and the attached exhibits also establish that the requirements of subsection B. have been met: B(1) is met because the Comprehensive Plan is being amended specifically to support the proposed zoning designation; B(2) is met because the site is suitable to the proposed F-F(10) zone; and B(3) is met because through this zone change application and process

---

<sup>1</sup> Missing text in published version of Section 9.010.

there has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.

**3.2.3.** The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by section B(1):

#### Goal 1 - Citizen Involvement.

The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities in its Comprehensive Plan and the zoning ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable plan and zoning ordinance provisions with opportunity for public input and by the public hearings required as part of this application and process.

#### Goal 2 – Land Use Planning.

The County's land use planning goal requires that procedures be established and followed to ensure public participation in land use decision making, and that there is an “adequate factual base” for land use decisions. All applicable procedures have or will be complied with in the consideration of this proposal. These findings and the record of this proceeding are a more than adequate factual base for the decision.

#### Goal 3 - Agricultural Lands.

Goal 3 provides for the preservation of Agricultural Lands for farm use. There are no Goal 3 designated Agricultural Lands on the subject property and Goal 3 therefore does not apply.

#### Goal 4 -- Forest Lands.

Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land, but is not now in timber production and has not historically been in timber production. As discussed in the preceding sections of this discussion, the subject property is not generally suitable for commercial forestry due to its development and use as residential property; its proximity to other residential properties; and its soil characteristics and historic uses. The proposal is to redesignate the property for rural residential uses, which will not have any impact on lands actually being used for commercial forestry.

#### Goal 5 - Open Spaces, Scenic and Historic Areas and Natural Resources.

The County zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the County. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject

property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

#### Goal 6 - Air, Land and Water Quality.

Goal 6 is “To maintain and improve the quality of the air, water and land resources of the state.” The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

#### Goal 7 -- Areas Subject to Natural Disasters and Hazards.

The subject property is not within any areas identified by the County as Natural Hazard Areas.

#### Goal 8 -Recreational Needs.

Goal 8 is “To satisfy the recreational needs of the citizens of Wasco County and visitors.” None of the policies of Goal 8 apply to the proposal.

#### Goal 9 -- Economy of the State.

Goal 9 is “To diversify and improve the economy of Wasco County.” The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

#### Goal 10 -- Housing.

Goal 10 is “To provide for the housing needs of the citizens of Wasco County.” There is an ongoing need for developable rural residential lots, and corresponding pressure on resource lands to fill that need. The proposed zone change helps to ameliorate that pressure by creating potential rural residential lots while having no impact on lands actually in forest production.

#### Goal 11 -- Public Facilities and Services.

Goal 11 is to “plan and develop a timely, orderly, and efficient arrangement of public facilities and services to provide a framework for urban and rural development.” The existing services and facilities in the area of the subject property are adequate for the proposal. The subject property adjoins Sevenmile Hill Road. Local fire and police services are provided by the rural fire protection district and the sheriff's office. Neither water nor sewer services are provided to the subject property, but are available on the subject property through individual well(s) and septic tank systems.

#### Goal 12 -Transportation.

Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The goal does not have approval standards, and is otherwise implemented through County transportation planning. The proposal will have little if any impact on the transportation system serving the subject property because there will be minimal increase in traffic generated by development that might occur as a result of the zone change. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. In connection with Goal 12, the County is required to apply the Transportation Planning Rule located in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires amendments to comprehensive plans that “significantly affect a transportation facility...assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” Sevenmile Hill/State Road is classified as a Rural Major Collector, which is consistent with the level of traffic from the rural residential uses that feed into it.

#### Goal 13 - Energy Conservation.

This Goal is met by application of development standards contained in the zoning ordinance.

#### Goal 14-Urbanization.

The level of existing development and possible development does not constitute “urban use.” Goal 14 does not, therefore, apply. It should be noted, however, that Policy 3 of Goal 14 encourages “subdivisions to be developed by a planned development approach, maximizing physical design, the retention of open space and reducing adverse impacts. The proposed zone change for the subject property is consistent with that policy.

**3.2.5** Subsection B(2) of zoning ordinance section 9.020 requires that the site be shown to be “suitable to the proposed use.” The proposed zone would allow, outright, farm and forest uses and dwellings on parcels of at least ten acres in conjunction with farm or forest uses. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”

**3.2.5..1.** The Forest-Farm zone is not a resource zone. (See October 11, 1995 non-resource determination letter Exhibit WC-Q, Betzing Record). In this case, it is the most suitable designation for the subject property,

which has been physically developed and entirely committed to nonresource use due to its location in close proximity to major county rural residential areas. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

**3.2.5..2.** The history of the area is also relevant to addressing this standard. As discussed in the Irrevocably Committed section of this discussion, the extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of the surrounding area to non-resource, rural residential uses. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable.

**3.2.6** Subsection B(3) of zoning ordinance section 9.020 requires, prior to approval of a zone change, that it be established that “There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.” The exhibits and record of this proceeding support a finding of compliance with this requirement. This requirement for rezoning has been met.

### **3.3 Zoning Ordinance – Section 9.030**

Section 9.030 requires review of the proposed action to determine whether it significantly affects a transportation facility. As discussed in Section 1.8, the proposed zone change will not significantly affect a transportation facility.

### **3.4 Zoning Ordinance – Section 9.040**

Section 9.040 allows for the imposition of such reasonable conditions “as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance.” The Section lists without limitation eight general categories of areas which may be conditioned to achieve the desired compatibility. Because the minimum lot size in the proposed zone change is 10 acres, because the uses surrounding the subject property are almost entirely rural residential, and because any future development will require compliance with applicable building and development standards, no conditions are necessary as part of this application to ensure the compatibility of the subject property to the surrounding uses.

### **3.5 Zoning Ordinance – Section 9.060 – 9.080**

Sections 9.060 through 9.080 require that the Planning Commission hold a hearing on the proposed zone change and make a recommendation to the County Board of Commissioners, which shall then take such action as it deems appropriate no sooner than twenty days after receipt of the Planning Commission’s recommendation.

## CONCLUSION

Because of the unique circumstances of the relationship between the subject property and surrounding land as explained above, the proposed residential uses will not commit adjacent or nearby resource land to nonresource use. The rural residential uses allowed are compatible with nearby resource use. Based upon all of the findings of fact and conclusions of law set forth above, the Planning Director recommends approval of the exception and zone change and recommends that the subject property be rezoned to F-F(10), and that the corresponding Plan, map and ordinance changes be made.

*Pioneering pathways to prosperity.*

# Staff Comments

- Apprehensions
  - Conducting forestry operations are not currently impracticable (Goal 4).
  - More residences would result in the loss of more wildlife habitat (Goal 5).
  - The proposal would create more residences, which would increase wildland-urban interface fire risk and potential impacts (Goal 7).
  - The impact of potentially three new single family dwellings on available water supplies in an area with existing concerns (Goal 5, 6, 11).
- Advantages
  - Three new dwellings will increase rural residential housing supply (Goal 10).
  - On land not currently (or in recent history) being used to harvest forest products, the transition from unused potential resource lands to probable useful residential land could result in a net positive impact economically (Goal 9).

**WASCO COUNTY PLANNING COMMISSION HEARING**

**April 2, 2019**

**3:00 p.m.**

**The Columbia Gorge Discovery Center**

**5000 Discovery Drive**

**The Dalles, OR 97058**

**CALL TO ORDER**

**ROLL CALL:**

**Members Present:** Chair Mike Davis; Vice-Chair Chris Schanno (arrived at 3:13); Vicki Ashley; Lynne MacIntyre; Russell Hargrave; Kate Willis; Alternate LeRoy Booth

**Absent Members:** Brad DeHart

**Staff Present:** Planning Director Angie Brewer, Senior Planner Will Smith, Planning Coordinators Brenda Coleman and Jensi Smith

**Chair Davis** opened the hearing at 3:04 p.m.

**Chair Davis** asked for roll call.

**PUBLIC COMMENT:**

**Chair Davis** asked for comments on non-agenda items. There were none.

**APPROVAL OF PAST MINUTES:**

**Chair Davis** called for comments on the Minutes from March 5, 2019.

**Commissioner MacIntyre** motioned to approve the Minutes from March 5, 2019. **Commissioner Ashley** seconded. No other discussion.

**Chair Davis** called for the vote.

**The motion was unanimously approved 6 to 0, 2 absent (Commissioner DeHart; Commissioner Schanno)**

A listing of the vote, as required by Oregon Revised Statute 192.650.c. is as follows:

Chair Davis – yes

Vice Chair Schanno – absent

Commissioner Hargrave – yes

Commissioner DeHart – absent

Commissioner Ashley – yes

Commissioner MacIntyre – yes

Commissioner Willis – yes

Alternate Booth – yes

**Chair Davis** asked for comment on the Minutes from March 12, 2019.

Commissioner Ashley moved to accept as submitted Minutes from March 12, 2019. Commissioner MacIntyre seconded. No other discussion.

Chair Davis called for the vote.

The motion was unanimously approved 6 to 0; 2 absent (Commissioner DeHart; Commissioner Schanno)

A listing of the vote, as required by Oregon Revised Statute 192.650.c. is as follows:

Chair Davis – yes

Vice Chair Schanno – absent

Commissioner Hargrave – yes

Commissioner DeHart – absent

Commissioner Ashley – yes

Commissioner MacIntyre – yes

Commissioner Willis - yes

Alternate Booth – yes

**REVIEW OF FILE #921-18-000086-PLNG, A REQUEST BY DAVID WILSON FOR A COMPREHENSIVE PLAN AMENDMENT, ZONE CHANGE FROM FOREST, F-2 (80) TO FOREST-FARM F-F (10) AND EXCEPTION TO STATEWIDE PLANNING GOAL 4**

Chair Davis opened the Hearing in the following manner:

**Opening the Hearing**

We will now open the Planning Commission Quasi-Judicial Hearing on agenda item 921-18-000086-PLNG, a request for a Comprehensive Plan Amendment, an Exception to Statewide Planning Goal #4 – Forest Lands, and a Zone Change from Forest, F-2 (80), to Forest-Farm, F-F (10).

The property involved is described as Tax Lot 2N 12E 22 4400; account number 884.

The criteria for approval of the land use decisions includes: Chapter 2 (Development Approval Procedures); Review Criteria: Oregon Administrative Rules (OAR) Division 4, Interpretation of Goal 2 Exception Process and Division 6, Goal 4 Forest Lands; Oregon Revised Statute (ORS) 197.732, Goal Exceptions; Wasco County Comprehensive Plan Chapter 11 – Revision Process, Sections A, B, C, E, H, I, and J; and Wasco County Land Use & Development Ordinance (LUDO) Chapter 9 – Ordinance Amendments, Sections 9.010, 9.020, 9.030, 9.0404, 9.050, 9.070, and 9.080.

The proposal must comply with applicable provisions contained in the Wasco County Comprehensive Plan, and State Law. Generally, unless otherwise noted, if a request is found to be consistent with the LUDO it is considered consistent with the Comprehensive Plan.

The procedure I would like to follow is:

- a. Disclosure of Interest, Ex Parte Contact or Potential Conflicts
- b. Reading of the Rules of Evidence
- c. Planning department will present their report
- d. Those who wish to speak in favor of the proposal
- e. Those who wish to speak in opposition of the proposal
- f. Rebuttal
- g. Questions by Planning Commission of staff, proponent, or opponent
- h. Close the hearing and record and begin deliberation (only Planning Commission can talk during this time)

---

Planning Commission Hearing

Minutes

04/02/19

Page 2

**Disclosure of Interest, Ex Parte Contact or Potential Conflicts:**

- a. Does any planning commissioner wish to disqualify themselves for any personal or financial interest in this matter? There were none. Does any Planning Commissioner wish to report any significant ex parte or pre-hearing contacts? (Staff contact is not ex parte and does not need to be disclosed.) There were none.
- b. Does any member of the audience wish to challenge the right of any planning commissioner to hear this matter? There were none.
- c. Is there any member of the audience who wishes to question the jurisdiction of this body to act on behalf of Wasco County in this matter? There were none.

**Planning Commissioner Disclosure of Site Visit**

For the record, have any Planning Commissioners conducted a site visit to the subject property? There were none.

**Party Recognition**

Anyone can speak for or against the proposal today. However, only those who have "party" status will be able to appeal a decision reached by this commission.

**A party is defined in Section 1.090 as:**

- a. *The applicant and all owners or contract purchasers of record, as shown in the files of the Wasco County Assessor's Office, of the property which is the subject of the application.*
- b. *All property owners of record, as provided in (a) above, within the notification area, as described in section 2.080 A.2., of the property which is the subject of the application.*
- c. *A Citizen Advisory Group pursuant to the Citizen Involvement Program approved pursuant to O.R.S. 197.160.*
- d. *Any affected unit of local government or public district or state or federal agency.*
- e. *Any other person, or his representative, who is specifically, personally or adversely affected in the subject matter, as determined by the Approving Authority.*

If you want party status, please say so at the beginning of your testimony. At the end of the public testimony, the planning commission will deliberate about granting party status to each person who requested it.

**The Rules of Evidence are as follows:**

- a. No person shall present irrelevant, immaterial, or unduly repetitious testimony or evidence.
- b. Evidence received shall be of a quality that reasonable persons rely upon in the conduct of their daily affairs.
- c. Testimony and evidence must be directed toward the criteria applicable to the subject hearing or to criteria that the party believes apply to the decision.
- d. Failure to raise an issue with sufficient specificity may preclude raising it before the Land Use Board of Appeals.
- e. Failure to raise constitutional or other issues relating to proposed conditions of approval with sufficient specificity to allow Wasco County to respond to the issue precludes an action for damages in circuit court.

Any party of record may request that the record remain open for at least seven (7) days prior to the conclusion of the initial evidentiary hearing.

Failure of persons to participate in the public hearing, either orally or in writing precludes that person's right of appeal to the Board of Commissioners. Written testimony submitted prior to the hearing constitutes participation in the hearing.

Chair Davis stated Senior Planner Smith would present.

Senior Planner Smith shared his presentation (See Attachments A & B)

During his presentation, **Senior Planner Smith** shared a Findings Checklist and sections of the Staff Report to help Commissioners analyze each part of the proposal. (See Attachment C)

During the presentation, **Senior Planner Smith** noted an error on Wasco County LUDO section - 9.020.A. "The original zoning was the product of a mistake" – No Finding, but there should be. Planning Commission should recommend adding a finding that states whether it was or was not mistake based on all discussions throughout, or at least state that this is discussed in above sections.

**Senior Planner Smith** summarized: (41:40)

- There is apprehension on one side but there are advantages on the other
- Conducting forestry operations are currently not impractical. Trees could be planted and harvested (Ponderosa Pine).
- More residences would result in the loss of wildlife habitat, but a small impact.
- With increase in residences, it increases the wildlife/urban interface.
- More residences could impact water supply.
- The advantage would be in increase dwellings, as adequate housing is an issue in the County.
- Not in the current recent history has the property been used to harvest forest products so it would not be taking away commercial forest use. It would take the potential away.
- There are economic impacts on housing.

**Senior Planner Smith** asked for questions.

It was asked if this was in the Big Game Overlay. It was established it is in EPD 8, Low Impact area, which is exempt from requirements.

It was noted during the discussion that this property had been involved in a previous request to change zoning, with a settlement of an appeal (in a Legislative action) to have the County look at rezoning in this area. That did not happen for a number of years, and then in 2012 there was a request for 29 new houses on 280 acres. The Staff Report during that time did not have a recommendation. The Planning Commission voted to approve the zone change, but the Board of County Commissioners voted to deny it. There have not been any comments on the current application but it was noted there had been comments on the previous request regarding concerns over fire and water. It was not appealed further and it was resolved with the County's good faith effort to look at it.

It was stated there is currently one residence on this property, but if request is granted, there could be up to four. It was also discussed that it is hard to quantify how much water is available in the area and noted the Water Master has said there was a general concern, with levels dropping every year. It was also discussed that Mosier or Mid-Columbia Fire District would be the ones to respond to a fire, with a substation close to the property.

**Chair Davis** asked for testimony from the applicant or their representative. (54:41)

**Bill Summerfield**, Attorney for the applicant spoke. He shared a visual aid to present and hard copy hand out. (See Attachments D & E) He spoke regarding the water issue. In the findings and conclusions, there is a statement showing there are two wells on the subject property. One produces 50 gallons per minute, one at 60 gallons per minute. The home where the applicant lives has its own well that produces 35 gallons per minute. He feels that the wells that are on the proposed rezoned property will be sufficient to support development, without any new ones added to the aquifers. He references four reports – noting one for when the well was drilled, one for when it was serviced and another is for a second well on the property. He stated that the 50 gallon per minute well is servicing the house located there and the other one is not doing much currently, but is available. He said they would probably do a shared well agreement or some other form of sharing water for the property at such time that development was implemented. A lot of that will be developmental criteria at the time the property would be subdivided.

**Mr. Summerfield** said they are trying to change that one green spot to a purple spot (referencing the map in Attachment B, slide 3). Everything along Sevenmile Hill Road is residential. There is no Resource land that touches Sevenmile Hill Road. He stated they are asking for common sense on this. This is the one parcel that is zoned differently. Having done some research, they haven't found a rhyme or reason to that. The Transitional Lands Study Area (TLSA) didn't touch that property, with no explanation as to why. **Mr. Summerfield** said it makes sense to rezone to keep it with the properties around it, in keeping with the neighborhood. There was a question about water in the TLSA. There is a map in the agenda packet, (PC-125) that show ground water levels in the area. The shared well reports are consistent with the TLSA map showing adequate ground water.

**Mr. Summerfield** said he isn't sure that the prior history of zoning has any relevance. This application stands on its own. The property stands on its own. The applicant was not part of the prior zoning request. They are not trying to implement anything that went on before or be part of any settlement. This is a new and unique application, pertaining to just this one 40 acre parcel.

**Mr. Summerfield** spoke regarding the Criterion. The physically developed and irrevocably committed seem to be very closely related to one another. Regarding the physically developed, he doesn't believe you just inventory what is on the property. You need to take a more holistic view of what is on the property. What does it look like, feel like, how is it being used. There is a log home, possibly a historic home from around the early 1900s. To build (this) home, the log home had to be de-commissioned. It is currently being used as an AG building. **Mr. Summerfield** stated **Mr. Wilson** hopes that someday the log home would be rehabilitated. The house in the meadow area seems to indicate that this area has never been used as forest land. **Mr. Summerfield** stated that **Mr. Wilson** has indicated he has been nurturing some trees for around 20 years and they have not grown very quickly. **Mr. Summerfield** indicated on the map a draw that runs through Ken Thomas's property. He showed a section of the map the **Mr. Wilson** has referenced as to where Eastern Oregon begins. **Mr. Summerfield** indicated on the map where a section is green and does well and another area that seems to be more scrubby. **Mr. Summerfield** showed south of that on the property where **Mr. Wilson** lives is scrubby as well. You don't see the canopy firs and others that you see on the other section.

**Mr. Summerfield** stated that when you look at the physically developed and irrevocably committed, there is the old pioneer house, barn, shed, and other structures. How would you develop that as a wood lot? What would it mean to the other people who live nearby? What would it mean for the other structures? You don't just measure the square footage of the structures; you look at the property as a whole. Doesn't look or feel like a commercial forest property.

**Mr. Summerfield** said he feels the same with the irrevocably committed. If you zoom out and look at the neighborhood. What would a commercial forest operation on Sevenmile look like, in the middle of this residential area? Each dot on the map is a home. It is pretty heavily developed. Those are factors in determining whether something is irrevocably committed. Is it compatible with its neighborhood? There is a sense when you drive down there that it is a rural residential neighborhood. It's not forest land. One of the questions is whether a mistake was made in the Comp Plan. **Mr. Summerfield** said it is hard to say that a mistake was made when you look at that map with one little green parcel that touches Sevenmile. You wonder what that's doing there. Without a stated reason for why it's there, it seems obvious it was either overlooked or ignored or a mistake was made there. **Mr. Summerfield** said that was 20 years ago and it's possible the surrounding neighborhood looked different than it does today. The subject property stands out as an anomaly.

**Mr. Summerfield** said there is a lot of talk in the Staff Report about the need to buffer resource zones from other uses around it. He said the buffer he sees is FF-10. That is what we are asking to do. This would help with the buffer and help resource zones themselves. He stated agreement with most of the green findings in the Staff Report (SR). He feels they are supported with the record in front of them.

**Mr. Summerfield** addressed the fire issue. He said the SR stated that most of the development has been north of Sevenmile, but if you look further out, there is residential development to the south, a lot of subdivisions. He

stated he doesn't feel that is a hugely valid concern. There is a natural fire break with the BPA powerline that runs through there. He doesn't see changing the zone on this property would be a public health, safety or welfare concern.

**Mr. Summerfield** also talked about big game. He feels that has been fixed. He said they looked at it and thought it was a non-issue. He would like to leave the record open to address, if it is an issue. He said other things like transportation, meeting or not meeting other goals are non-issues. If we are not addressing it, there is no conflict. We are hopeful to get a recommendation for a zone change.

**Chair Davis** called for questions. (1:11:00)

During questioning, it was established that **Mr. Wilson** lives on the property behind the subject property. Questions regarding the casing of the wells were brought up, noting if they are not cased they need to be. It was stated they go through multiple aquifers.

The applicant, **Mr. David Wilson** testified. (1:13:12) He stated he was not sure if the wells were cased, as it was before his time on the property. He stated he went to the well master and got copies of what was done there. He stated one is in the ravine by the old log home that provides water to log home and the historic house. **Mr. Wilson** stated the property used to look like a wrecking yard. He stated the motor had been knocked off the well head, the casing and everything went down into the well. This happened since he lived there. They had to pull the casing out, pull the pump out and did a bunch of casing work on the thing. On the well logs, the later dated one shows that they did improvements. He is not sure how far they are cased. **Mr. Wilson** was asked when the last time the wells were tested, where the head is. **Mr. Wilson** state he found out that if work is done on a well now, they have to put in separate PVC in so they can gage it. He said none of his wells have had that, they do not have separate PVC. He stated he is not in the survey. **Mr. Wilson** was asked if he has spoken to the Water Master to assure it is rated for domestic use. **Mr. Wilson** state two houses on one well are allowed. Otherwise a water district must be created. **Mr. Wilson** was asked if he irrigates pasture land. He replied no. He said the lower property well had a 300 horse pump on it at one time. Since then it has been switched out to a regular domestic pump. He found records that date back to the historic house, stating it is very old. He said he had worked to keep it (historic house) from falling in by jacking it up but found he couldn't do anything with it without getting it on its own parcel. He has to subdivide the property to do anything with the historic house.

There were no other questions for the applicant.

**Chair Davis** asked if anyone else wanted to speak in favor. There were none.

**Chair Davis** asked if anyone wished to speak in opposition. (1:17:42)

**Sheila Dooley** introduced herself and said she wanted to address the four concerns stated in the Staff Report. These included conducting forest operations are not currently impractical. She stated she had been involved in the TLSA study. This was not rezoned due to the value as forest land, the property is still capable to use for commercial use. This zoning is not a mistake. Across the road trees have been replanted and are growing. Just because this property has not been replanted for forest use does not make it less valuable as forest land. Looking at the map, there is forest land all around it. Conversion of this property will result in further encroachment of residential use onto Resource zones. Approving this is setting a precedent. The applicant owns an addition 69 acres of forest land. She feels the same arguments on this could be used to rezone that property. When Ken Thomas had applied for rezoning, the Land Conservation and Development Commission (LCDC) had objected because it is good forest land. In the application, the development pattern references the old farm house. The owner decided to build a second house instead of using the farm house. She stated an increase in residences will decrease the amount of wildlife habitat and would increase the wildland/urban interface fire risk. If a fire starts here, it will spread to the adjoining forest lands. She noted it takes 60-80 years to grow marketable timber. Many of these areas are not in a fire district and are rated extreme fire risk by the Department of Forestry. Response time is low due to the terrain and

distance. Fire risk and intensity have increased over the years. The residences increase the fire risk which is related to public safety and welfare in this area. Sevenmile hill was intended as a buffer, with development on one side and forestry on the other. Three new Single Family Dwellings (SFD) would impact available water supply. Water issues are increasing. Ms. Dooley stated a residence just up the road had their well go dry. She referenced information in the SR that the Water Master said the water table has been dropping two feet a year. If it only takes one criteria not being met to deny, she feels the request should be denied. These could be second homes that do nothing for housing shortage. She feels the housing issue should be addressed in incorporated areas with higher density. The fact that it is not currently used for forest land is not relevant.

The Commission did not have any questions for Ms. Dooley.

Jill Barker spoke in opposition to the request. She stated she had many of the same concerns as Ms. Dooley. She stated the property just down the street from the subject property had their well drop 50 feet during the winter. There is a lower water supply in this area. She was involved with the Ken Thomas proposal and there was overwhelming opposition to that from the Forestry Department, Fish & Wildlife, and LCDC. It is common knowledge that area has a dwindling water supply. North of Sevenmile is all small parcels and that is a huge demand on the aquifer. She understood that the subject parcel was part of the earlier Ken Thomas proposal which was denied, with good reason. Big game winter range is included there. The site is not suitable for the proposed reason. Ms. Barker said she believes if there is a fire, the power line isn't going to do anything to be a fire break.

Ms. Barker said it has been noted the soils (4s and 5s) are adequate for commercial forest use. In regards to the old historic farm house, it was being lived in in the 1970s. It wasn't that long ago that was a home. She feels the fire danger isn't if, it is when. She feels there is too much development and too much demand on the water. It is very dry and we are getting less water each year. There is already one house on that property already where it is 80 acre minimum, this one is on 40 acres. Ms. Barker stated that one of the reasons there is development south of Sevenmile is that many of those lots were pre-existing, during the TLSA study. Just left of this property, got a special conditional use to develop it and there was controversy for years. The other properties by Dry Creek Road have been there for years. She stated she was not sure about new development, not sure when they were approved. She feels it is a bad idea, a dangerous idea. The one home is adequate for that property.

There were no questions from the Commission for Ms. Barker.

There were no others to speak in opposition.

Chair Davis asked if the Applicant wish to refute any of the testimony.

Mr. Summerfield spoke regarding the comments related to the Ken Thomas proposal. We haven't had that with this. He feels you could draw inference from that. As to the fire danger, that would be addressed with buffers and such at the Building Permit stage, and adequately addressed elsewhere. The driveway is Dave's and any new development would be served by that driveway. It is very wide, any development would be served off that.

Chair Davis called for questions.

During the question and answer segment it was established the drainage from the homestead goes north. It was stated there may be a spring. It was also established that grass is grown there, with it being baled sometimes. There is no tax exemption; it is believed it is residential.

There was a question regarding the comment that the zoning was not a mistake. Ms. Dooley was asked if she had evidence of that. Ms. Dooley responded that the TLSA study was based on the soil types, the slopes. It looked at a lot of different factors. For clarification, Ms. Dooley was asked if the subject property was unique. Ms. Dooley responded no, it was not rezoned, they could have chosen to rezone it but they didn't.

**Chair Davis** called for further questions. There were none.

**Chair Davis** closed the Hearing at 4:41 pm. (1:37:12)

Deliberation:

**Chair Davis** noted the handouts that staff had given. He stated he would like to use that during the conversation, starting with a straw poll, focusing on critical area. He noted that if one thing is denied, the whole thing must be denied.

Straw poll:

- Commissioner Ashley – opposition to 1, 2 and 17
- Commissioner Willis – Concern with 17
- Alternate Booth – No issues
- Commissioner MacIntyre – No issues
- Commissioner Schanno – No issues
- Chair Davis – No issues
- Commissioner Hargrave had left the meeting

Discussion:

It was noted that for F2 the zoning is one home for 240 acres. This parcel is already smaller than that. There are residential areas with relatively small lots all around when heading up the hill towards this property. If you look around, how does this sit relative to the neighborhood? There are a lot of residences.

It was noted that the error that **Senior Planner Smith** indicated on Wasco County LUDO section - 9.020.A would be resolved during the discussion, deciding if there had been a mistake or not and findings written as such in the recommendation.

The soils classification was discussed with note there had not been any evidence presented that timber could not be grown on this property. It was also stated that just because it could support commercial forestry, does that mean that it should, considering the location and development pattern. The discussion also mentioned that forest practices would have timber harvest equipment and travel on a residential road. Commercial timber harvesting would also increase the fire risk, with the high wind zone. Even with a large fire break but in a high wind area, the fire will jump, crowning from tree to tree. It was noted there would be serious concern if it were a timbered area. There would also be the potential to have noise complaints from residents in the area. In the conversation, it was noted that if the request were granted to FF, trees could still be harvested.

It was stated that if it is approved, the issue of the water would need to be addressed and the wells should be cased. The water table and reduced water availability were noted as concerns.

The aquafer for the area was discussed. **Senior Planner Smith** stated he did not have an Aquafer map so he did not know if the residents there were all on the same aquafer. It was noted that the TLSA map had indicated there were two aquafer, of different types, in the area. The Water Master is quoted in the Staff Report. The amount of water per minute is not something the Planning Department regulates typically. The capacity is not just for household use, but also for irrigation and fire suppression. **Director Brewer** stated the Fire Safety Standards Ordinance does have standards for residential fire suppression and that would be applied at the time of future development. It was also stated that the wells would have to be tested to utilize the water and cased appropriately. It was questioned if the Water Master had expressed concern, is that enough to deny the request. It was stated the Water Master would be the one to determine if another well would be allowed there or if existing wells could be shared. The properties would need to pass a perk test, and if not, it would not be approved for development.

There was discussion about the TLSA report and if it missed or didn't miss this property. The comment was made that all along that line is FF and some of these issues would be addressed when the request is taken to the next level. **Director Brewer** stated the Oregon State Land Use protects Resource Lands over residential uses, so if the

outcome is there would be a negative impact to the residential area, you are actually saying in that context is this area is irrevocably committed to a rural residential use. Therefore it is more appropriate for this part of the county to have more residential use and not commercial. She stated that if that was the consensus, it would help with concerns noted about items #1 & #2.

**Chair Davis** called for a motion.

**Commissioner Schanno** moved to recommend approving the change in zone. **Alternate Booth** seconded.

**Chair Davis** opened for further discussion. (2:01:10)

The discussion included what the criterion is for this property to be irrevocably committed and if it is considered physically developed. This included looking at the use of the parcels by the subject property and what was physically located on the subject property, including the house, structures, and roads to determine if it is physically developed. Soil types were also discussed. **Senior Planner Smith** informed the Commission if there was consensus to affirm these, they could choose physically developed, irrevocably committed or both. It was stated that language could be added to clarify the findings.

There was discussion on what could happen by taking Resource land out and it was noted we are trying to protect Resource land in Wasco County. Once you lose it, it's gone. It was stated the land had been left in that zone for that purpose. It was also noted that the subject property is not isolated.

**Director Brewer** noted that the language for the findings has to stand on its own for this property. The same criteria would have to be used for other future proposals on other property.

**Chair Davis** called for a break. (2:26:44)

**\*\*Break\*\***

**Chair Davis** resumed the Hearing at 5:42pm.

**Chair Davis** stated there is still a motion on the table.

**Commissioner Willis** moved to approve and amend the motion on the table. She moved to change the motion on the table and amend it, on page 13, PC 18 for the commission, in relation to OAR 660 004-0028(2) b and c to clarify the uniqueness of this property because it is surrounded on three sides by residential or potential residential development and its uniqueness in relationship to the surrounding area by being the only F-2 zoning on the Sevenmile Road. A change to the proposed F-F would complete the residential buffer to the resource area.

**Alternate Booth** seconded.

**Chair Davis** noted the motion on the table was to approve the whole thing and there has been an amendment to that motion to make that property very unique.

There was more discussion regarding the language of the amendment noting it was added to make a very tight buffer with this property to prevent creeping of the buffer. The language would just help identify this property as unique. It was also noted that anyone could come in and request a zone change, but they would have to go through the same process. It was stated that this language is to illustrate intent, to show confinement.

**Chair Davis** called for a vote on the amendment to the original motion, noting the language had been written and projected on the screen for everyone to read. **Commissioner Schanno** asked for clarification. **Senior Planner Smith** read out loud to explain the sections. It was stated the language is adding to the findings for B & C.

**The motion was approved 5 to 0; 1 abstention; 2 absent (Commissioner DeHart; Commissioner Hargrave-left before the vote)**

A listing of the vote, as required by Oregon Revised Statute 192.650.c. is as follows:

Chair Davis – yes

Vice Chair Schanno – yes

Commissioner Hargrave – absent

Commissioner DeHart – absent

Commissioner Ashley – abstained

Commissioner MacIntyre – yes

Commissioner Willis - yes

Alternate Booth – yes

**Commissioner MacIntyre** stated she thought we were changing the findings. **Commissioner Ashley** stated that she believed that also. **Commissioner Schanno** stated we are adding to the findings.

**Chair Davis** stated the modification to the original motion had been approved. He called for discussion of the motion with the modifications.

**Commissioner Willis** stated the modification was to provide rationale for the findings. It was clarified that it was not taking out the finding that it was developed, but added to it. **Director Brewer** stated there was general consensus.

There was a discussion about what had been identified in the findings regarding 'development'. **Commissioner Ashley** stated she feels it is physically developed more than was indicated, demonstrated by things like the wells, outbuildings, etc.

**Commissioner Ashley** moved that we add additional findings to the approval finding to indicate the further development of the parcel, which includes wells and additional buildings for the physically developed exception finding [OAR 660 004 0025 (2)]. **Commissioner Willis** seconded.

**Commissioner Schanno** noted that most of this is in the Staff Report. **Director Brewer** stated the highlighted areas are conclusions of the larger findings above them. **Senior Planner Smith** stated he did not reference the wells in his findings. **Director Brewer** said the Staff Report consists of the rules that apply, information from the application, staff's findings of facts, and conclusions of law. She stated the requested changes can be made if that is part of the amended motion.

**Commissioner Willis** stated she feels the conclusion should include more of the laundry list of stuff. **Senior Planner Smith** said that could be added.

**Chair Davis** asked for any further discussion on this amendment to the motions. There was none.

**Chair Davis** called for a vote on the amendment to the motion.

**The motion was approved 6 to 0; 2 absent (Commissioner DeHart; Commissioner Hargrave-left before the vote)**

A listing of the vote, as required by Oregon Revised Statute 192.650.c. is as follows:

Chair Davis – yes

Vice Chair Schanno – yes

Commissioner Hargrave – absent

Planning Commission Hearing

Minutes

04/02/19

Page 10

Commissioner DeHart – absent  
Commissioner Ashley – yes  
Commissioner MacIntyre – yes  
Commissioner Willis - yes  
Alternate Booth – yes

**Chair Davis** stated there has been a motion to approve with two amendments. He called for discussion on the last amendment.

There was a question on where in the process a discussion on item #17 would take place. **Chair Davis** stated this is the time to discuss it and can make a further amendment to the original motion, if desired.

**Commissioner Ashley** stated she wasn't sure that the public safety issues have been addressed. By changing the zoning, have we opened a can a worm for people living in or near forest zones? The number of structures and people involved with that were discussed. The transportation issues, the number of vehicles and response time for emergency services were part of the discussion. It was stated there isn't anything the Commission can do if people go beyond the design parameters. It was also stated there is another process to deal with any proposed dwellings, where there are safeguards in place.

**Chair Davis** called for further discussion. There were none.

**Chair Davis** stated there is a motion with two amendments and called for the vote.

**Chair Davis** called for the vote.

**The motion was approved 5 to 1; 2 absent (Commissioner DeHart; Commissioner Hargrave-left before the vote)**

A listing of the vote, as required by Oregon Revised Statute 192.650.c. is as follows:

Chair Davis – yes  
Vice Chair Schanno – yes  
Commissioner Hargrave – absent  
Commissioner DeHart – absent  
Commissioner Ashley – no  
Commissioner MacIntyre – yes  
Commissioner Willis - yes  
Alternate Booth – yes

**Chair Davis** stated the vote is to recommend approval with the amended language.

**Chair Davis** adjourned hearing at 6:06 p.m.

Mike Davis, Chair  
Wasco County Planning Commission

Angie Brewer, Director  
Wasco County Planning & Development

Wilson notes

Criteria and Summary

Public Facilities and Services: General overview

Land Use History: TLSA, Ken Thomas Settlement

STATE LAW

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197.732: Exceptions allowed IF Physically Developed, or Irrevocably Committed. Describes process, what to look for. Actual factors addressed in OAR section

\*(1.) OAR 660-004-0025: Exception Requirements for Land Physically Developed to Other Uses: requires describing extent of development on a map, is it "Physically developed to the extent that it is no longer available for uses allowed by the applicable goal"?

- Describe management of small woodlands, soils (49C and 50D), slope, southern parcel of tract assessor information (is successfully managing to meet annual income requirements)

\*(2.) OAR 660-004-0028 (1)-(2): Irrevocably Committed: is it committed? Are existing adjacent uses making uses allowed by the applicable goal impracticable? Discuss FF and RR zones all around, use of land (development %), and relationship to southern parcel.

\*(3.) OAR 660-004-0028(3): Uses allowed by applicable goal are impracticable, specifically Goal 4 uses like forest operations, harvesting of forest products, etc. Describe how adjacent lands in residential use make it unlikely, but adjacent forest lands make it potentially possible. "just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use." Not necessary, but how would it be affected?

\*(4.) OAR 660-004-0028(4): Does the conclusion address all factors of section 6 and sufficiently explain why the facts support the impracticability?

\*(5.) OAR 660-004-0028(5): Do findings and facts discuss irrevocably committed throughout the report?

\*(6.) OAR 660-004-0028(6): Addressing the following factors: existing adjacent uses, existing public facilities and services, parcel size and ownership patterns of the area and adjacent lands, neighborhood

and regional characteristics, natural/man made features, physical development (this one has approval/denial findings)

OAR 660-004-0028(7): Does the submittal include required info? Yes

OAR 660-004-0040: Not applicable, not related to Goal 14 urbanization, not looking to allow parcels smaller than allowed by proposed new zone, any future proposals will have to comply with F-F requirements

OAR 660-004-0118: Planning and Zoning for Exception Areas, Describing area, are uses compatible with nearby resource areas, (NOTE: one semi-denial finding here – may decide to leave this in if relevant), how it relates to nearby urban areas (none) or industrial uses (none)

#### COMPREHENSIVE PLAN

Findings describe who may apply (QJR = landowner),

(factors for consideration, not specific criteria. Denials here are generally related to denials elsewhere. Are they generally satisfied? If not, could be a denial)

H 1,2: Review Goals, does this comply, and does it demonstrate substantial proof that such a change “shall not be detrimental to the spirit and intent of such goals”. \*(8.)

1. Citizen Involvement
2. Land Use Planning
3. Agricultural Lands
4. \*(9.)Forest Lands
5. Open Spaces, Scenic and Historic Areas, and Natural Resources
6. Air, Water, and Land Resources Quality
7. Areas subject to Natural Disasters and Hazards
8. Recreational Needs
9. \*(10.)Economic Development
10. Housing
11. Public Facilities and Services
12. Transportation
13. Energy Conservation
14. Urbanization

\*(11.) H 3: Mistake in original Comp plan can be demonstrated. Did TLSA resolve the mistake, or did it miss this property?

\*(12.) H 4: Factors relating to need for healthy, safe, aesthetic surrounding and conditions. Fire risk increase? Is it significant enough to matter? Does the proposal match the aesthetic of the area?

\*(13.) H 5: Proof of change in the inventories originally developed. Original inventory included this as forest, has since changed (TLSA), but not here. Stop encroachment?

\*(14.) H 6: Revisions based on special studies or other info. Has enough info been provided to justify the stated need for low density housing, for which F-F could be used?

I. Transportation Compliance. Not significant enough to trigger a Traffic Impact Analysis. 29 new ADT would not change functional class of road.

J. Procedures

Application, notification, hearings. Complied.

WC LUDO

9.010 Application presented on forms used as issued by the office.

9.020.A. "The original zoning was the product of a mistake" – No Finding, but there should be. PC should recommend adding a finding that states whether it was or was not mistake based on all discussions throughout, or at least state that this is discussed above in sections XYZ?

\*(15.) 9.020.B.1. the rezoning will comply with Comp Plan (related to earlier discussion – it will or it won't depending on what has been decided above)

\*(16.) B.2. site is suitable to proposed zone. LUDO states purpose of F-F: "The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses." But Comp Plan says: "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge." These are Class 4. Does it make sense as a residential area considering residential uses nearby?

\*(17.)B.3 consideration of public health, safety, welfare. Fire risk? Water impacts?

9.030 Transportation Planning Rule Compliance: insignificant impact

Rest of Chapter 9 = any additional conditions, recommendations, notice requirements, actions

PLANNING DEPARTMENT

Planning Commission  
Public Hearing  
April 2, 2019

Applicant/Owner: David Wilson  
(921-18-000086-PLNG)

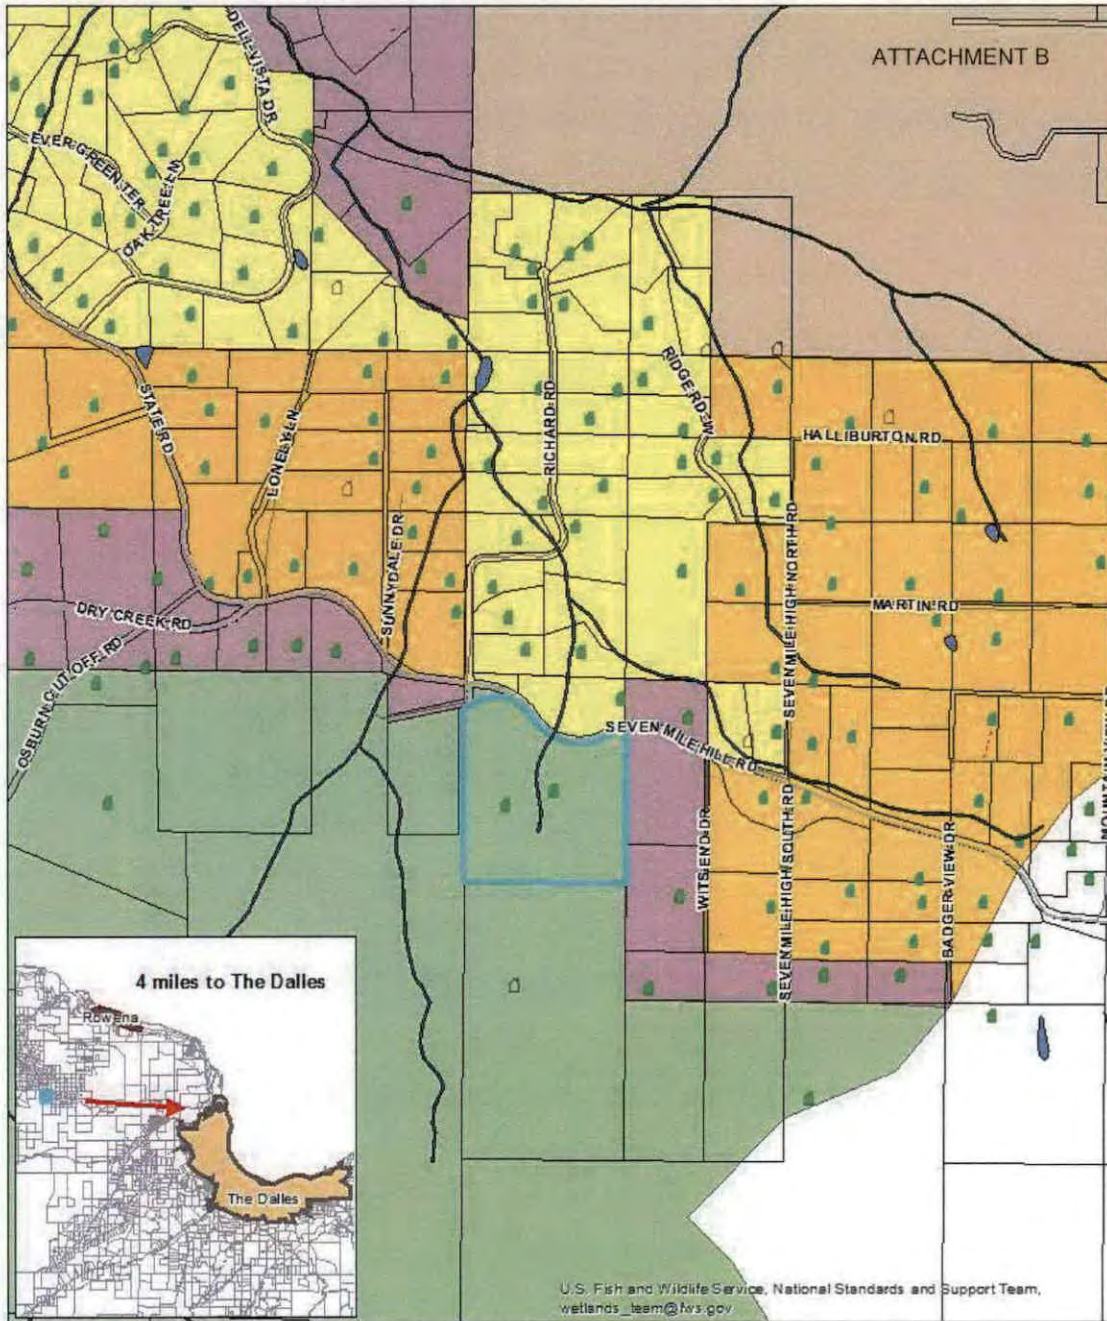

# Request

- Comprehensive Plan Map Amendment: Change a legal parcel designated “Forest” to “Forest Farm;
- Exception to Statewide Planning Goal 4 – Forest Lands; and
- Zone Change: Change a legal parcel tax lots zoned F-2 (80), Forest, to F-F (10), Forest-Farm
  - Applicant/Owner: David Wilson
  - Location: 7100 Seven Mile Hill Road
  - Size: @40 acres

# Staff Comments

- Apprehensions
  - Conducting forestry operations are not currently impracticable (Goal 4).
  - More residences would result in the loss of more wildlife habitat (Goal 5).
  - The proposal would create more residences, which would increase wildland-urban interface fire risk and potential impacts (Goal 7).
  - The impact of potentially three new single family dwellings on available water supplies in an area with existing concerns (Goal 5, 6, 11).
- Advantages
  - Three new dwellings will increase rural residential housing supply (Goal 10).
  - On land not currently (or in recent history) being used to harvest forest products, the transition from unused potential resource lands to probable useful residential land could result in a net positive impact economically (Goal 9).

\*Comprehensive Plan findings: Factors for consideration, not standards that must be strictly met. They must still show that they can be generally satisfied!

*(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and*

*(c) Complies with standards under subsection (1) of this section."*

*Planning Goal 2, part II, states:*

*A local government may adopt an exception to a goal when:*

*(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]*

*(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;"*

**FINDING:** Both the goal and OAR 660-004-0005(1)(c) adopt the legislative definition of an "exception" with minor variation—the goal states "Complies with standards for an exception" and the rule states "Complies with. . . the provisions of this division." OAR 660-004-0010(1) explains, "The exceptions process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land," and includes "Goal 4 'Forest Lands.'"

Goal 4 provides that: "Where a ... plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources."

Rule definitions of "resource land" and "nonresource land" support a conclusion that, in this instance, an exception is necessary before the subject property can be planned and zoned for forest-farm uses, a rural residential, nonresource category of uses under the County's plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC's rule for exceptions, OAR 660, Division 4.2.2.

This request is for both "physically developed" and "irrevocably committed" exceptions to Goal 4, "Forest Lands," which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state's forest land base. These reasons are addressed below.

**2. Exception Requirements for Land Physically Developed to Other Uses.**

OAR 660-004-0025 contains standards for adoption of a "physically developed" exception.

*OAR 660-004-0025 states:*

*(1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)*

- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** To determine the extent to which the property is physically developed, staff compared where driveways and existing structures are, and identified them in the following map:

Figure 1: Development

This map demonstrates that currently approximately 12.5% is physically developed. That leaves 87.5% available for farm or forestry uses. These numbers are for discussion purposes and to estimate what is currently physically developed, and what is not (but may still be used by the landowner for farm or forest uses). Although most of the County's commercial timber use occurs in National Forests or in lands owned by large lumber companies such as Weyerhaeuser or SDS, small woodlots owned by individuals and small families play a vital role in the industry as well. These lands are often those that abut or intermingle with rural residential uses, and in many cases the tax benefits can be the only way to afford to successfully manage (for both fire safety as well as timber harvesting) several dozen acres of

woodland that may accompany that rural residential life style. Collectively across Oregon, many thousands of acres of forested lands are owned in these small parcels, and Goal 4 seeks to protect them from the effects of rural sprawl. A woodland as small as two acres qualifies for Oregon's Special Assessment Program for Forestland, allowing landowners to have a reduced property tax assessment. With 87.5% (35 Acres) of undeveloped land on the subject parcel, this land could still be useful under Goal 4 provisions. However, whether that land is capable of supporting commercial timber production depends heavily on other factors such as available soil type and slope.

### *Soils*

Two soil types are identified on the subject parcel: 49C and 50D (Wamic Loam – see Exhibit 5). Both are Class IV soils. The "Guide for using Soil Survey Single Phase Interpretation Sheets" (also known as the Green Sheets – See Exhibit 6) states that Class IV soils "have very severe limitations that reduce the choice of plants, require very careful management, or both". The Green Sheets maintains statistics on capability and yields per acre of crops and pasture, woodland suitability, windbreaks, wildlife habitat suitability and potential native plant community. These categories and the ratings for these two soil types are relevant to how well this property may be able to fulfill the requirements of Goal 4: Forest Lands by conserving forest lands for forest uses.

- Capability and yields per acre of crops and pasture (high level management)
  - Both soil types are listed as 4e (Class 4 which has "very severe limitations that reduce the choice of plants, require very careful management, or both", Subclass e which indicates that the main limitation is risk of erosion unless close-growing plant cover is maintained). Both soil types have Winter Wheat (35 bushels/acre) and Grass Hay (1.5 tons/acre) listed.
- Woodland Suitability
  - Both soil types are listed as 4A (Class 4, discussed above, and subclass A which represents slight or no limitations). For both soil types four out of five management problem categories are listed as having 'slight' or 'moderate' problem potential with plant competition the only one rated as 'severe' in both. Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover. Common trees on these soil types are Ponderosa Pine and Oregon White Oak with Ponderosa Pine listed as the only tree to plant. The site index for both is 70 which is an indication of the potential productivity and is based on the average total height of the stand the age of 100 years. A site index of 70 translates to the high end of Cubic Foot Site Class 6 (20-49 cubic feet per acre potential yield category) for Ponderosa Pine.
- Windbreaks
  - For both soil types the Green Sheets indicate "none" for Windbreaks. This states that windbreaks are not normally needed.
- Wildlife Habitat Suitability
  - This section relates soils to their potential for producing various kinds of wildlife habitat. For both soil types under "potential for habitat elements", hardwood and conifer trees are both rated as Fair. Under potential as habitat for: Woodland wildlife, the rating is also Fair.
- Potential Native Plant Community
  - For both soil types the same five grass and shrubs are mentioned as common, as well as two types of trees – Oregon White Oak and Ponderosa Pine.

A soils map is attached as Exhibit 7 (soil descriptions and their guide are contained in Exhibits 5 and 6).

### *Slope*

The property is mostly flat from the north to the center rising gradually from there to the south, east, and west. Slopes from the road to the southern property line average 6-10%. The low point of the parcel is in the northwest corner at about 1550' in elevation, 100' lower than the house at about 1650' and 210' below the high point to the southeast at 1760'. There are no slopes on the property that are too steep for either residential development or commercial forestry.

The vegetation of the subject parcel is split between open grassland in the north and center, with primarily Oregon White Oak interspersed with Ponderosa Pine, and a very few Douglas Fir around the edges of the property. Grasses and shrubs create moderately dense underbrush throughout.

The soils indicate some suitability for agriculture and there is history of such on both this parcel and the parcel to the south, also owned by the applicant (See below in b. OAR 660-004-0028 (2) for more detailed information about adjacent lands). The home on the applicant's adjacent southern parcel was approved in 1989 through the Conditional Use Permit process as a "Dwelling in conjunction with agricultural use." Additionally, an agriculture structure was placed on that southern parcel several years ago and retroactively approved through a Planning Commission action in 2017 (PLAAPL-17-10-0001). Discussions in the staff report for that decision, as well as application material including a Farm Management Plan, state that a portion of the parcel to the south is currently used for farm use, producing approximately 6 acres of alfalfa/oats, five poultry, and three cattle (seasonal), with plans upon the owners retirement to expand the farm use.

On the subject parcel itself, aerial imagery on County GIS (accessed November 8, 2018) appears to indicate several acres of crops in the western half of the open area at the center of the property. Beyond the three seasonal cows reportedly used on these parcels recently, the proposed exception area does not have a known history of commercially grazing for sheep or cattle.

The following Finding was made for the 2017 application in regards to agricultural use on the southern parcel in the tract:

*"According to Melanie Brown, Appraiser, the subject parcel is required to generate a minimum income of \$3,000 per year. She stated that the Assessor sends out a questionnaire every three years to determine what income has been generated from farm use. Assessor records indicate that the subject parcel has exceeded the income requirement for the past several years..."*

**APPROVAL FINDING:** The development pattern that exists on this property makes forestry uses impractical. These include the current home and outbuildings located halfway up the property on the western side after an approximately 1,000' driveway, the old farmhouse in the center after a 400' driveway and the old barn another 240' further south, within 450' of the rear property line. The latter two more than half bisects the property contributing to the physically developed nature of the subject parcel. Due to these physical developments, and the impracticality of conducting forestry uses around them, a physically developed exception would apply.

**DENIAL FINDING:** The clustering of the existing house on the western edge, with the 1000' driveway forming a property boundary line establishes very little physical development throughout the subject parcel. There are two old structures in the center of the property, along with another 640' driveway that runs north to south accessing them. However these are not useable in the condition they are in and the driveway would be as useful for commercial forestry uses in accordance with Goal 4 as it would

be for future residential uses in the event of an exception. Slope throughout the property is gentle, and soils are all Class 4, which, as discussed above, is conducive to forestry uses. This land has minor physical developments on it, but it is still available for forestry uses allowed by Goal 4, so a physically developed exception would not apply.

**3. Exception Requirements for Land Irrevocably Committed to Other Uses.**

*OAR 660-004-0028 contains standards for adoption of a "committed" exception.*

**a. OAR 660-004-0028(1):**

*(1) A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:*

*(a) A 'committed exception' is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;*

*(b) For the purposes of this rule, an 'exception area' is that area for which a 'committed exception' is taken;*

*(c) An 'applicable goal,' as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.*

**FINDING:** This applicant proposes a 'committed exception' for this property, which is the 'exception area'. The proposed goal exception applies to land in the Forest zone (F-2) and the 'applicable goal' that currently applies to these lands is Goal 4: Forest Lands.

**APPROVAL FINDING:** An exception to remove this parcel from the forest zone and transfer it to a non-resource "Farm-Forest" (FF) zone would still promote and permit many of the uses allowed in Goal 4 designated areas. More importantly, granting the request will promote economically efficient forest practices on large forested tracts south of the subject property, in a manner more consistent with sound management practices.

**DENIAL FINDING:** The map above in section OAR 660-004-0025(2) dealing with physically developed exceptions indicates that only 12.5% is developed, with only 7.5% being used for residential purposes (the other older structures and driveway are unused). Additionally, those residential uses are clustered along the western property line. The applicant claims that the 40 acre site is irrevocably committed to residential uses, when in fact only 12.5% is committed to general development, and only 7.5% committed to residential use. This leaves 87.5-92.5% remaining for forest use. As discussed above in a thorough review of the soil types on site and how they are classified, staff finds that the portion that remains uncommitted to residential use is sufficient to be used for a forestry use. Though there are portions that are grass land currently and portions that are farmed currently, there are also portions that have small amounts of merchantable timber present, as well as the soil conditions to grow more if a landowner so desired to make that investment in the future of the land. Combined with the 69 acre adjacent parcel to the south, also owned by David Wilson, this tract consists of 109 acres of land with commercial timber potential. Small woodland forests are found throughout the Pacific Northwest and are a viable means of using this land productively while meeting the applicable statewide planning goal

#4: Forest Lands. Staff does not find that the existing residential commitment of 7.5% of the property qualifies it as committed to the extent where a goal exception could apply.

- b. OAR 660-004-0028(2): "Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:

(a) *The characteristics of the exception area;*

**FINDING:** The characteristics of the exception area are fully discussed in the findings above in response to OAR 660-004-0025.

(b) *The characteristics of the adjacent lands;*

**FINDING:** The parcels immediately adjacent to the exception area have substantially similar characteristics for terrain and soil types (See Exhibit 7, Soils map, and Exhibit 8, Submitted Maps). North of Sevenmile Hill Road and West of the Osburn Cutoff Road, the land is at a lower elevation and has fewer trees.

The areas to the north and east of the proposed exception area have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the four subdivisions in the area, three were platted in the early part of the 20th century, and the fourth in 1979 (Fletcher Tract-1908; Fairmont Orchard Tracts-1911; Sunnyside Orchards-1912; Flyby Night Subdivision-1979). For three of these subdivisions, the majority of the lots are approximately 5 acres in size. The county has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Between 1994 and 1997, the exception area and the lands surrounding it were included in what Wasco County collectively designated as the "Transition Lands Study Area" (TLSA). The county performed an analysis of the area, in part to determine where rural residential development would be appropriate. The final report for the TLSA was published on September 12, 1997, (Exhibit 1) and included recommendations outlining the sub-areas within the study area that were suitable for residential development. The exception area and the lands to the north and east were determined to be suitable for further rural residential development. Certain zone changes have been processed as part of the TLSA program to further the development of residential uses in the area surrounding the exception area.

The exception area is surrounded on two sides (north and east) by residential development and land zoned for rural residential development, under the three non-resource rural residential zoning designations, R-R(10), R-R(5) and F-F(10). The parcel immediately to the south is zoned for forestry uses, but is used for residential and small scale agricultural uses. Lands south of that, and immediately west of the subject parcel and proposed exception area are generally used for commercial forestry. See the map below for a visual representation of the area.

*(c) The relationship between the exception area and the lands adjacent to it;*

**FINDING:** As described in preceding sections of this submittal, the exception parcel is immediately abutted to the south and west by F-2 (80) Forest zoned property (69 and 439 acres), to the north across Seven Mile Hill Road by R-R (5) Residential zoned property (7.9 acres), and to the east by F-F (10) Farm Forest zoned property (averaging 10.8 acres). The properties to the south and west are resource zones while those to the north and east are non-resource zones.

All are in separate ownerships, except the 69 acre F-2 parcel to the south, which is also owned by the owner of the subject property of this application, David Wilson. Combined with the subject parcel that is a 109 acre tract of resource zoned Forest land. There is another home on the southern property and a shop that is utilized by the applicant for farm use (according to information from previous Land Use decisions found in PLAAPL-17-10-0001 and PLAPAR-17-05-0002) on the southern property. The southern parcel is accessed by the same driveway that accesses the existing home on the subject property, running along its western edge.

The County GIS map shows that the western boundary of the subject parcel abuts a narrow spur of the larger 439 acre commercial forestry operation to the south west of the two parcels owned by David Wilson. That spur appears to be able to provide access to Seven Mile Hill for that forestry operation. Immediately to the west of that is the 16 acre parcel described in (b) above as being 1/3<sup>rd</sup> F-F and 2/3 F-2 zoned property. That parcel abuts Seven Mile Hill Road but current access is shared along the northern 120 feet of the subject parcel's driveway. No dwellings exist on that property.

The subject property does not have any special relationships with the other non-resource properties adjacent to it.

*(d) The other relevant factors set forth in OAR 660-004-0028(6).*

**FINDING:** These factors are discussed below.

- c. OAR 660-004-0028(3): "Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is 'impossible.' For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

(a) Farm use as defined in ORS 215.203;

(b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;

(c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(o)."

**FINDING:** This application seeks an exception to Goal 4: Forest Lands, where the primary goal is to "conserve forest land for forest uses".

ORS 215.203(2)(a) states:

"[F]arm use" means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. "Farm use" includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. "Farm use" also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. "Farm use" also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. "Farm use" includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. "Farm use" does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including "farm use" and "propagation or harvesting of a forest product," and OAR 660-006-0025(2)(a) states:

- (a) Forest operations or forest practices including; but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

The "forest products" definition can be found in ORS 532.010(4), which states that forest products are "any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores." An examination of Farm Uses and their potential on this property are also relevant as indicated by OAR 660-004-0028(3) above. There are currently agricultural practices occurring on the subject parcel and the adjacent property to the south in the same ownership tract as described above in OAR 660-004-0028(6)(c)(B). The uses on the adjacent tract in the same ownership are relevant due to a requirement to examine "the relationship between the exception area and the lands adjacent to it" when examining a potential irrevocably committed exception as discussed above in OAR 660-004-0028(2).

OAR 660-006-0025 describes those "Uses Authorized in Forest Zones". An exception granted to this goal may have an impact on these types of uses. This OAR describes five (5) general types:

- "(a) Uses related to and in support of forest operations;
- (b) Uses to conserve soil, air and water quality and to provide for fish and wildlife resources, agriculture and recreational opportunities appropriate in a forest environment;
- (c) Locationally-dependent uses, such as communication towers, mineral and aggregate resources, etc.

(d) Dwellings authorized by ORS 215.705 to 215.755; and

(e) Other dwellings under prescribed conditions"

In regards to (c), no aggregate sites have been identified on this property, nor is there anything about it's location that makes it significant for communication towers. In regards to (d) and (e) there is currently an existing dwelling on the parcel, with no potential for further dwellings under current rules in the Forest Zone. That leaves (a) and (b) as the primary uses which must be safe guarded on this property in accordance with Goal 4: Forest Lands.

The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means "not capable of being carried out in practice," according to Webster's New World Dictionary (2nd College Ed., 1980). "Capable" means "having ability" or "able to do things well." Id. Finally, "in practice" means by the usual method, custom or convention. Id. Webster's Third New International Dictionary, (Unabridged Ed., 1993) defines "impracticable" as "1a : not practicable : incapable of being performed or accomplished by the means employed or at command : infeasible \* \* \* c : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice in the exception area. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

#### **APPROVAL FINDING**

The current level of residential development has increased to the point that commercial resource use has become impracticable. The exception area is surrounded on three sides by existing and planned development, with the potential for additional residential development in the future. This is caused by the proximity of residential neighbors on three sides, require additional protection to fire protection, funding and general control of the area, and prevent the use of site specific resource uses and vegetation that competes with commercial tree species. Further conflict with residential use because of the noise associated with commercial operations and the safety risks of logging near residential property.

The exception area is located in the Forest Zone, and the current level of residential development has increased to the point that commercial resource use has become impracticable. The exception area is surrounded on three sides by existing and planned development, with the potential for additional residential development in the future. This is caused by the proximity of residential neighbors on three sides, require additional protection to fire protection, funding and general control of the area, and prevent the use of site specific resource uses and vegetation that competes with commercial tree species. Further conflict with residential use because of the noise associated with commercial operations and the safety risks of logging near residential property.

**DENIAL FINDING:** One significant conflict is the risk of fire. The increased numbers of residences increase the risk and potential severity of fires, because fires caused by humans add to the frequency of natural fires. Human occupation is always associated with quantities of flammable materials and fire accelerants, such as fuels on household products. The impact of the fire risk is magnified not just by the number of residences but also physical features, including terrain, climate and vegetation (see discussion earlier).

Based on the current composition of the subject parcel as being predominantly open space, or oak, with some areas of Ponderosa Pine and a few Douglas Fir trees, it is not currently composed of enough marketable timber to harvest in the near future. However, those open areas can be planted, and the soil types are good enough to support merchantable timber, as discussed in findings above for OAR 660-004-0025. The applicant did not sufficiently demonstrate the impracticability of utilizing the 35 undeveloped acres. On the contrary, the state of Oregon, and Wasco County, recognize the ability to have as little as 2 acres of woodlands to qualify to receive tax reductions for forestry uses. The current owner's lack of interest in forestry uses on his property does not preclude it from having potentially valuable merchantable timber in the long run. The slopes, soil types, and ability to be used for small scale agriculture demonstrate that this parcel could practicably be used for forest uses per OAR 660-004-0028(3).

- d. OAR 660-004-0028(4): "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."

**FINDING:** All applicable factors of section (6) are addressed below.

**APPROVAL FINDING:** The applicant's statement and exhibits address all applicable factors and reasons why the facts support the conclusion that uses allowed by Goal 4 are impracticable in the exception area, as described throughout this report.

**DENIAL FINDING:** The applicant submitted extensive statements and exhibits explaining their position on why they feel that the facts support the conclusion that uses allowed by Goal 4 are impracticable. However, staff has found these statements and exhibits to be inconclusive in that attempt, with reasons given throughout this report.

- e. OAR 660-004-0028(5): "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands."

**FINDING:** The proposal is for a goal exception, zone change, and comprehensive plan amendment for one parcel. This parcel makes up the entirety of the "exception area". This parcel is physically developed as described above. Findings of fact and a statement of reasons why this land is found to be to not be irrevocably committed are discussed throughout this report.

- f. OAR 660-004-0028(6): Findings of fact for a committed exception shall address the following factors:

engages in forestry operations on his extensive Wasco County land holdings. The power line separates the northern 70 acres of that parcel from the southern 370 acres, all of which is in the F-2 (Forest) Zone. This impediment feature is not insurmountable or impassable to forest uses.

(f) *Physical development according to OAR 660-004-0025; OAR 660-004-0025 states the "Exception Requirements for Land Physically Developed to Other Uses" as follows:*

- (1) *A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.*
- (2) *Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception."*

**FINDING:** Part of the justification that the applicant has given for this exception is that a dwelling currently exists on the subject parcel. The exact nature and extent of this house and other structures on the property are identified in Figure 1 above. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is 40.6 acres. If the zone change were to be approved, this land would become F-F (10) and three additional dwellings could be built there.

**APPROVAL FINDING:** The current home, abandoned old home, and associated outbuildings are current and former residential uses on this property. Though there is open space on roughly half the eastern portion of the property, it is predominantly oak and open grassland which is not suitable for forestry uses as described and supported in Goal 4. A driveway runs along and near the western property line that connects to another residence on the property to the south of the subject parcel. This development – buildings and residential access ways – qualify as uses not allowed by the applicable goal, Goal 4 in this case.

**DENIAL FINDING:** The current home and driveway are clustered against the eastern property line. There are abandoned (potentially historical) structures near the center of the property, accessed by another driveway. However, the entire eastern and southern portions of this 40.6 acre parcel are undeveloped. Much of the center of the property is currently grassland, but the eastern edge and southern half are wooded with oak and ponderosa pine. Ponderosa Pine is a marketable forest product and the soil characteristics of the parcel demonstrate that more could be grown for harvest in this area, as described above. Though there are buildings on the subject parcel, they do not dominate the landscape, and forestry uses allowed by goal 4 could still be cultivated across much of the property. These structures do not constitute enough physical development to justify a goal exception in a forest resource zone.

(g) *Other relevant factors;*

The following information is in regards to immediately adjacent properties:

Direction	Account	Size	Zone	Use
North	1196	0.7	F-F (10)	Vacant
North	1195	7.9	R-R (5)	Residential
North East	1194	6.4	F-F (10)	Residential
East	885	13.2	F-F (10)	Vacant
South East	887	12.9	F-F (10)	Residential
South	13446	69.3	F-2 (80)	Residential/Resource
South West	399	439	F-2 (80)	Resource
West	400	16.3	F-2 (80)	Vacant
North West			F-F (10)	Vacant

The residential use of the subject property is compatible with adjacent uses. In general, lands to the south are F-2, resource lands. Lands to the east and west, immediately south of and adjacent to Seven Mile Hill Road are residential (F-F (10) or R-R (10)). Nearby lands to the north, across Seven Mile Hill Road are almost all either R-R (5) or R-R (10) and in residential use. The subject property is currently being used as both a residence and a small farm. The continued use of this land in a residential fashion would be compatible with nearby residential uses, but expanding would conflict with potential resource uses.

The BPA line that runs 1/5 mile south of the subject property is the only public facility nearby. Expanded residential use of the subject property would not affect the use and operation of this transmission line. Public services used by the nearby area include roads, police, fire, electrical, telephone, and solid waste disposal. The potential addition of a maximum of three new single family dwellings along Seven Mile Hill Road would have a negligible effect on roads, police, electrical, telephone or solid waste disposal services. There is a slight increased risk of wildfire with the increase of residential use in this wildland-urban interface area.

Sewer services in rural areas of the County are handled with individual septic systems. Nearby and adjacent residential uses on ten acre parcels of land have not encountered difficulty establishing sufficient septic systems. In a November 7, 2018 email John Zalaznik, Environmental Health Supervisor for the North Central Public Health District, stated (in reference to the subject property):

"I think in general that area could accept on site systems. The area looks like it is mostly treed so in general those sites have deeper soils than those open meadow sites. The soils can change so fast though I would not be certain until site evals are done."

Water services in rural areas of the County are handled with individual private wells. There has been widespread concern in the Seven Mile Hill area about a gradually withdrawing water table requiring deeper wells and occasionally resulting in neighboring wells drying up. The addition of three new private wells could have a slight effect on available water supplies for established residential uses in the area. According to an October 12, 2018 email between staff and Watermaster Robert Wood, "Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average". The Oregon Water Resources Department is "not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn't available within the capacity of the resources." He stated that those uses that are exempt from water rights, such as "single or group

**FINDING:** The following findings demonstrate how compliance **is not** achieved with statewide land use planning goals that may apply to the request, as required to be considered by subsections 1 and 2 of H., the plan amendment General Criteria:

**Goal 1 – Citizen Involvement.** The purpose of Goal 1 is to ensure the “*opportunity for citizens to be involved in all phases of the planning process.*” Wasco County has included opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures such as public notice and public hearings for the proposed changes. Compliance with Goal 1 is ensured through compliance with the applicable Plan and zoning ordinance procedural provisions. These proceedings are being conducted with notice and hearings as required by law and County ordinance. Public participation will be a feature of Planning Commission and Board of County Commissioner meetings, which – by the time of this hearing - will have been sufficiently noticed to the public according to state law. Given this information, the proposal complies with Goal 1.

**Goal 2 – Land Use Planning.** The purpose of Goal 2 is “*to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.*” The County’s planning process has been acknowledged by the State as being in compliance with the Statewide Planning Goals, and was followed in consideration of the proposal. The “adequate factual base” is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal complies with Goal 2, requirements for the adoption of exceptions to a statewide goal.

**Goal 3 – Agricultural Lands.** Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal. Small-scale farming activities may be possible in the area, but are not likely to be affected by the allowance of three new rural residences.

**Goal 4 – Forest Lands.** Goal 4 provides for the preservation of Forest Lands for forest use. The property included in the proposed exception area is currently designated Forest Land but is not in forest use, nor is it in a forest assessor class (its assessor class is 401 for residential improved tract). As indicated by the applicant’s materials, the intention of this proposal is to preserve small-scale forest and farm uses, while allowing establishment of rural residences, through a conditional use process, under the County’s F-F(10) zoning. Because the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4.

**APPROVAL FINDING:** The exception is justified in part 2, addressing LCDC’s administrative rule requirements for “built” and “committed” exceptions. The proposal complies with Goal 4.

**DENIAL FINDING:** Part 2 below outlines how this application fails to meet Goal 4 requirements and does not adequately address LCDC administrative rule requirements for “built” and/or “committed” exceptions. The proposal does not comply with Goal 4.

**Goal 5 – Open Spaces, Scenic and Historic Areas, and Natural Resources.** The subject parcel is located within the Low Elevation Winter Range of the Big Game Wildlife Overlay. Wasco County recognizes in its Comprehensive Plan that big game herds are a valuable natural resource. The County Zoning Ordinance contains siting and development criteria, found in Zoning Ordinance Section 3.920, for lands within designated areas in the County. Goal 5 is met by the application of these standards to any development

within the designated Big Game Winter Range. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 – Air, Water, and Land Resources Quality. Goal 6 is “*To maintain and improve the quality of the air, water and land resources of the state.*” The proposed exception area is not located in a federal air quality attainment area, and three new single family dwellings will not generate significant additional air pollution. Sewage disposal needs of all new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is “*To protect people and property from natural hazards.*” Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The only natural hazard listed in the rule relevant to the request is “wildfires.” Chapter 10 of the Wasco County LUDO, created in 2007, establishes standards and requirements that ensure fire safe development throughout the County, and would apply to any additional residences or land uses in this area. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is “*To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.*” Under the current zoning, hunting and fishing operations are allowed outright without lodging, and parks and campgrounds are allowed as conditional uses. If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. Recreational needs can be achieved under both zoning designations. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is “*To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon’s citizens.*” The subject property is currently being used for one single family dwelling. A zone change to F-F (10) would potentially increase that to a maximum of four single family dwellings, an increase in economic development. It is not currently being used for forest uses, nor is it being assessed for forest tax deferral status. Previous analysis above in OAR 660 Division 4 Section 25 of soil types, as well as the current use of the neighboring approximately 1,100 acre tract for forestry to the south show that this parcel is in an area that does have potential to be used as part of a commercial forestry operation.

**APPROVAL FINDING:** The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with Goal 9.

**DENIAL FINDING:** The proposal promotes Goal 9 by allowing residential uses. However Goal 9 would also be promoted by encouraging forestry practices on this parcel, which the County considers to be the appropriate use of the subject property in view of its established zoning and the economic potential of timber and logging that exists, as outlined above in OAR 660 Division 4. The proposal is not consistent with Goal 9.

Goal 10 – Housing. Goal 10 is “*To provide for the housing needs of citizens of the state.*” The rule is directed to lands in urban and urbanizable areas, and encourages residential development to occur in existing urban areas. However, the proposal will allow development of additional rural residences in an area that is largely committed to existing rural residential uses. Guideline A(4) of Goal 10 states: “Plans

Goal 14 – Urbanization. Goal 14 is “To provide for an orderly and efficient transition from rural to urban land use...” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No “urban” services will be required to allow the maximum amount of development contemplated by this proposal. In the TLSA Study, well water was noted as being available in the area in sufficient quantities to serve the proposed housing density that would result from a zone change to F-F (10) (see Exhibit 4, TLSA Groundwater Study). However, as discussed above in Background information, the Wasco County Watermaster, Robert Wood, and the OWRD have identified the Seven Mile Hill area as having decreasing water supplies since then. Any future application for property division or development will need to comply with their requirements regarding residential well water usage. The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 are coastal specific goals and do not apply in Wasco County.

3. *A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.*

FINDING: Webster’s least recriminatory definition of “mistake,” most appropriate here, is “a misunderstanding of the meaning or implication of something.” (Unabridged Ed., 1993). This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the area are more appropriate than the original designations. As noted previously, this area was evaluated as part of the TLSA – which posed a very similar question. The application materials assert that the County was incorrect in its characterization of the area as most appropriate for commercial forest uses. The materials attribute this to the fact that numerous residential lots were platted south of Sevenmile and Dry Creek roads before the designation of F-2 was made. Additionally, subsequent County land use decisions have allowed rural residential uses on both sides of Sevenmile Hill and Dry Creek roads. The applicant claims that the area now appears to be committed to residential uses, and no longer suitable for forestry uses. They argue that a change in the character of the neighborhood is evident, and justification for a Zone Change.

The TLSA study could be interpreted to support a conclusion that lands in this area are appropriate for rural residential uses. The TLSA evaluated lands in this area and recommended changes to some properties and not others. This property was evaluated but not rezoned. However, that was 20 years ago, and conditions continue to change. The County’s rezoning of several parcels south of Sevenmile Hill Road from F-F (10) to R-R (10) after completion of the TLSA Study, allowing development of nonfarm or forest dwellings as permitted uses supports this conclusion. The approval of dwellings in and immediately adjacent to the subject property also could support a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

~~REDACTED SECTION~~

changed from undeveloped forest and woodlot, to rural residential uses, and seeks to resolve existing conflicts between forest and residential uses.

**DENIAL FINDING:** The TLSA study was extensive in its evaluation of the Sevenmile Hill area, and ultimately concluded not to rezone the subject property, while rezoning others. The soils data, slope and other information available to staff indicate that the property is capable of being used for commercial forestry uses – although the current owners are not using the land for that purpose at this moment in time. The conversion of some properties south of the road to residential uses does not dismiss the need to hold the line somewhere between commercial forestry and single family dwellings. A conversion of this property would continue the mistake of allowing the encroachment of residential uses into resource zones in this area.

4. *Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.*

**APPROVAL FINDING:** This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses. Low intensity residential development would match the aesthetic surroundings of single family dwellings along both sides of Seven Mile Hill. Any risk of additional fire exposure is mitigated by County Fire Safety Standards that have been in place since 2007 and can be found in Chapter 10 of the WCLUDO.

**DENIAL FINDING:** An alteration from a forest use to a residential use increases the risk of fire in a fire prone area. This threatens the safety of adjacent forestry uses, as well as the encroaching residential uses in this area. In addition, the rural aesthetic of a country road would be further degraded by allowing additional dwelling development in an area full of wildlife and natural beauty. Staff finds that a consideration of these factors lends itself to maintaining this property in a resource zone rather than permitting a conversion to residential.

5. *Proof of change in the inventories originally developed.*

**APPROVAL FINDING:** The proof required by this section is provided by these findings and the attached exhibits. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed within, and in close proximity to the resource area, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed—demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small-scale farm and forest uses with limited density housing in a manner that promotes and improves protection of nearby forest resource lands south of the BPA easement.

**DENIAL FINDING:** This application asserts that due to adjacent uses being converted to residential uses, that the forest use of the subject parcel should also be changed to match. However, the encroachment of housing and incompatible residential uses into the forest zone should be halted and not encouraged in order to adequately accomplish Goal 4 objectives in this area. Staff does not feel that a "Proof of change in the inventories" has been established.

6. *Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.*

**FINDING:** As described throughout these findings, the proposed revisions are based on the TLSA study, County land use decisions in the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits.

**APPROVAL FINDING:** As evidenced by the discussion in this staff report, and the further supported by the Wasco County Comprehensive Plan, there is a public need for low-density rural residential uses, and for small scale farm and forest uses in the County generally as well as in the Sevenmile Hill area specifically. The justification for the particular change, addressed throughout these findings, is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. It is feasible to mitigate the potential impacts of fire in the area, by utilizing existing firebreaks, and imposing requirements for clustering dwellings; maintenance of fire breaks around dwellings; maintenance of adequate fire suppression water supplies, and similar practices in accordance with Chapter 10 Fire Safety Standards, of the LUDO. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

**DENIAL FINDING:** This application attempts to demonstrate that there is a public need for low-density rural residential uses, and for small scale farm and forest uses, in the County generally and in the Sevenmile Hill area specifically. The justification for the particular change is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. However, as discussed throughout the report, staff has determined that not enough information has been provided to support this change. That forestry/residential buffer is important to maintain and to establish this area as residential would erode it further in this area, which has already been impacted by excessive residential development affecting its water supply and putting forest reserves at risk of wildfire. The Commercial Forestry uses established by Goal 4 on this property under its current zoning are also an established public need in this County. Due to the existing potential for this property to still be used in that fashion, it has not been demonstrated or fully justified by this application and its exhibits that there is a public need for the requested change from a resource to a non-resource zone.

#### I. Transportation Planning Rule Compliance

1. *Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). ‘Significant’ means the proposal would: (exclusive of correction of map errors in an adopted plan);*
  - a. *Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
  - b. *Change standards implementing a functional classification system; or*

**FINDING:** This zone change proposal from Forest, F-2 (80), to Forest-Farm, F-F (10), was initiated by the owner of the subject property, David Wilson, on forms provided to him by the planning department, which he signed. All required information was included to address criteria. This is a quasi-judicial action.

*Section 9.020 – Criteria for Decision*

*The Approving Authority may grant a zone change only if the following circumstances are found to exist:*

- A. The original zoning was the product of a mistake; or*
- B. It is established that*
  - 1. The rezoning will conform with the Comprehensive Plan; and,*

**FINDING:** This zone change request includes a request for a plan amendment and an exception to Goal 4. The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by this criterion. These goals are discussed above in III.A. Wasco County Comprehensive Plan where the request was found **to be to not be** in conformance. This criterion would be met because the Comprehensive Plan would be amended specifically to support the proposed zoning designation. Following amendment of the Comprehensive Plan Map, the plan designation for the subject property would be "Forest-Farm." The zone designation, "Forest-Farm," with a minimum lot size of ten acres, (F-F (10)) is a zone that conforms with the proposed plan designation.

- 2. The site is suitable to the proposed zone;*

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan's "Definitions—Existing Land Use Map" identifies the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield." In this section, the Forest-Farm zone purpose is stated as "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge."

The proposed zone would allow farm and forest uses (permitted outright) and dwellings (conditional use permit) and land divisions down to ten acres. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

*"The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses."*

**APPROVAL FINDING:** The Forest-Farm zone is not a resource zone. In this case, it is the most suitable designation for the subject property, which has been partially built and entirely committed to non-resource use due to its location in close proximity to a major county rural residential area, and on site existing residential uses including a single family dwelling, an unused historic dwelling, and associated outbuildings. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

The history of the area is also relevant to addressing this standard. The extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of those surrounding areas to non-resource, rural residential uses. On-going development of residences south of Sevenmile Hill and Dry Creek Road has diminished the value of those roads as a firebreak for commercial timberlands to the south. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable. The subject property is less suitable for commercial forestry than the forestland south of the subject property. The subject property is better used as a buffer between low-density rural residential uses to the north, and commercial forestry uses to the south. The most appropriate design for that buffer is: 1) allow limited housing opportunities in relatively close proximity to existing roads and development and 2) promote clustering of housing generally away from commercial forest areas allowing remaining open areas to be used for small or large scale commercial forest activities, wildlife habitat and as a buffer for those activities. The subject parcel is suitable to the proposed zone as required by Criterion 8.2.

**DENIAL FINDING:** The Forest-Farm zone is not a resource zone. A change to this zone could decrease its potential to be used as part of a commercial agriculture or timber production operation. Both uses exist in the area to the south. Additionally, the soils on this parcel are all Class 4 which, as discussed above, is capable of providing for commercial timber uses. The Green Sheets have a category for "Woodland suitability" where it addresses growth. For the two soil types on the subject property, both are listed at "4A", where 4 is the number of cubic meters/hectare/year, and A is "slight or no limitation". Four cubic meters/hectare/year is equal to 57.2 cubic feet/acre/year. This significantly exceeds the Comprehensive Plan designation that calls for those lands devoted to Forestry Uses to exceed 20 cubic feet per acre per year. The Comprehensive Plan Definition of the purpose of the Forest Farm zone makes it clear that the intent was to limit that zone designation to Class 6 or 7 soils, which are not on the subject parcel at all. Additionally, there are concerns of lowering water supply and general fire risk in this area, as discussed throughout this report. A change to a zone allowing increased density in this area would have a negative impact on both factors. This site does not appear to be suitable to the proposed zone.

3. *There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations."*

**FINDING:** This application is for a goal exception and zone change from F-2 to F-F. The effective result of an approval would be a maximum of three additional single family dwellings, if this land was divided and developed. The TLSA study investigated the suitability of the area for residential needs, including "the availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area," all important factors to consider in this area when it comes to public welfare. The proposal is designed to provide an appropriate buffer between low-density rural residential, forest and farm uses on the one hand (to the north, east and west), and commercial forestry uses on the other (to the south). The "specific zoning" includes the Forest-Farm zone with a ten acre minimum lot size, clustering to a density not to exceed one dwelling for every ten acres. The potential three new dwellings would be required to comply with the fire safety standards for

development set out in Chapter 10 of the Wasco County LUDO, as well as any other applicable requirements of law pertaining to health, safety, and welfare, such as building codes or public health requirements. **The exhibits and record of this proceeding support a finding of compliance with this requirement.**

However, any addition of new residences increases fire risk due to human activity. Seven Mile Hill Road makes an excellent fire buffer, and almost all of the rural residential development in the area is to the north of it. Currently there are other residential developments south of the road to both the east and west of the Subject Parcel, but their existence does not justify approving even more risk in this area. Seven Mile Hill should remain as a buffer for fire in this area. Additionally, there has been an identified risk to ground water in the area as the water table has been gradually lowering in recent years, according to Robert Wood, Watermaster. Three additional residences and their wells would further accelerate that loss. Due to these two main concerns related to public safety and welfare in this area, this request should be denied.

#### *Section 9.030 - Transportation Planning Rule Compliance*

*A. Review of Applications for Effect on Transportation Facilities - A proposed zone change or land use regulation change, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). “Significant” means the proposal would:*

- 1. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
- 2. Change standards implementing a functional classification system; or*
- 3. As measured at the end of the planning period identified in the adopted transportation system plan:*
  - a. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
  - b. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
  - c. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new single family dwellings. As discussed above in the Background section, the Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7)):

The predominant source of water in this area is from wells. There are two wells on the subject property (see Well Reports WASC 003131, WASC 003111, & WASC 003105). Yields are 50 & 60 GPM. There is also a well located on applicant's property to the south of the subject property yielding 35 GPM (see Well Report WASC 1609). The wells on the subject property have the capacity to support additional residential development, and the yields of all wells indicate adequate groundwater supply in the area. See additional findings below regarding the TLSA study.

**PLANNING COMMISSION RECOMMENDATION  
to The Wasco County Board of Commissioners**

FILE # 921-18-000086-PLNG

**BOARD OF COMMISSIONERS HEARING DATE:** June 5, 2019, 10:15 AM

**NEWSPAPER PUBLISH DATE:** May 15, 2019

**REQUESTS:**

1. Comprehensive Plan Map Amendment: Change a legal parcel designated "Forest" to "Forest Farm;
2. Exception to Statewide Planning Goal 4 – Forest Lands; and
3. Zone Change: Change a legal parcel tax lots zoned F-2 (80), Forest, to F-F (10), Forest-Farm

**PLANNING COMMISSION  
RECOMMENDATION:**

Approval, with conditions

**APPLICANT/OWNER:**

David Wilson, 7100 Seven Mile Hill Road, The Dalles, OR 97058

**PROPERTY  
LOCATION:**

The subject property is located along and south of Sevenmile Hill Road, southeast of it's intersection with Richard Road, approximately 4.3 miles northwest of The Dalles, Oregon; more specifically described as:

<u>Map/Tax Lot</u>	<u>Acct#</u>	<u>Acres</u>
2N 12E 22 4400	884	40.16

**ZONING:**

F-2(80), Forest Zone

**ENVIRONMENTAL**

**PROTECTION DISTRICT:**

EPD-8, Sensitive Wildlife Habitat Overlay Zone (Low Elevation Winter Range)

### PLANNING COMMISSION RECOMMENDATION

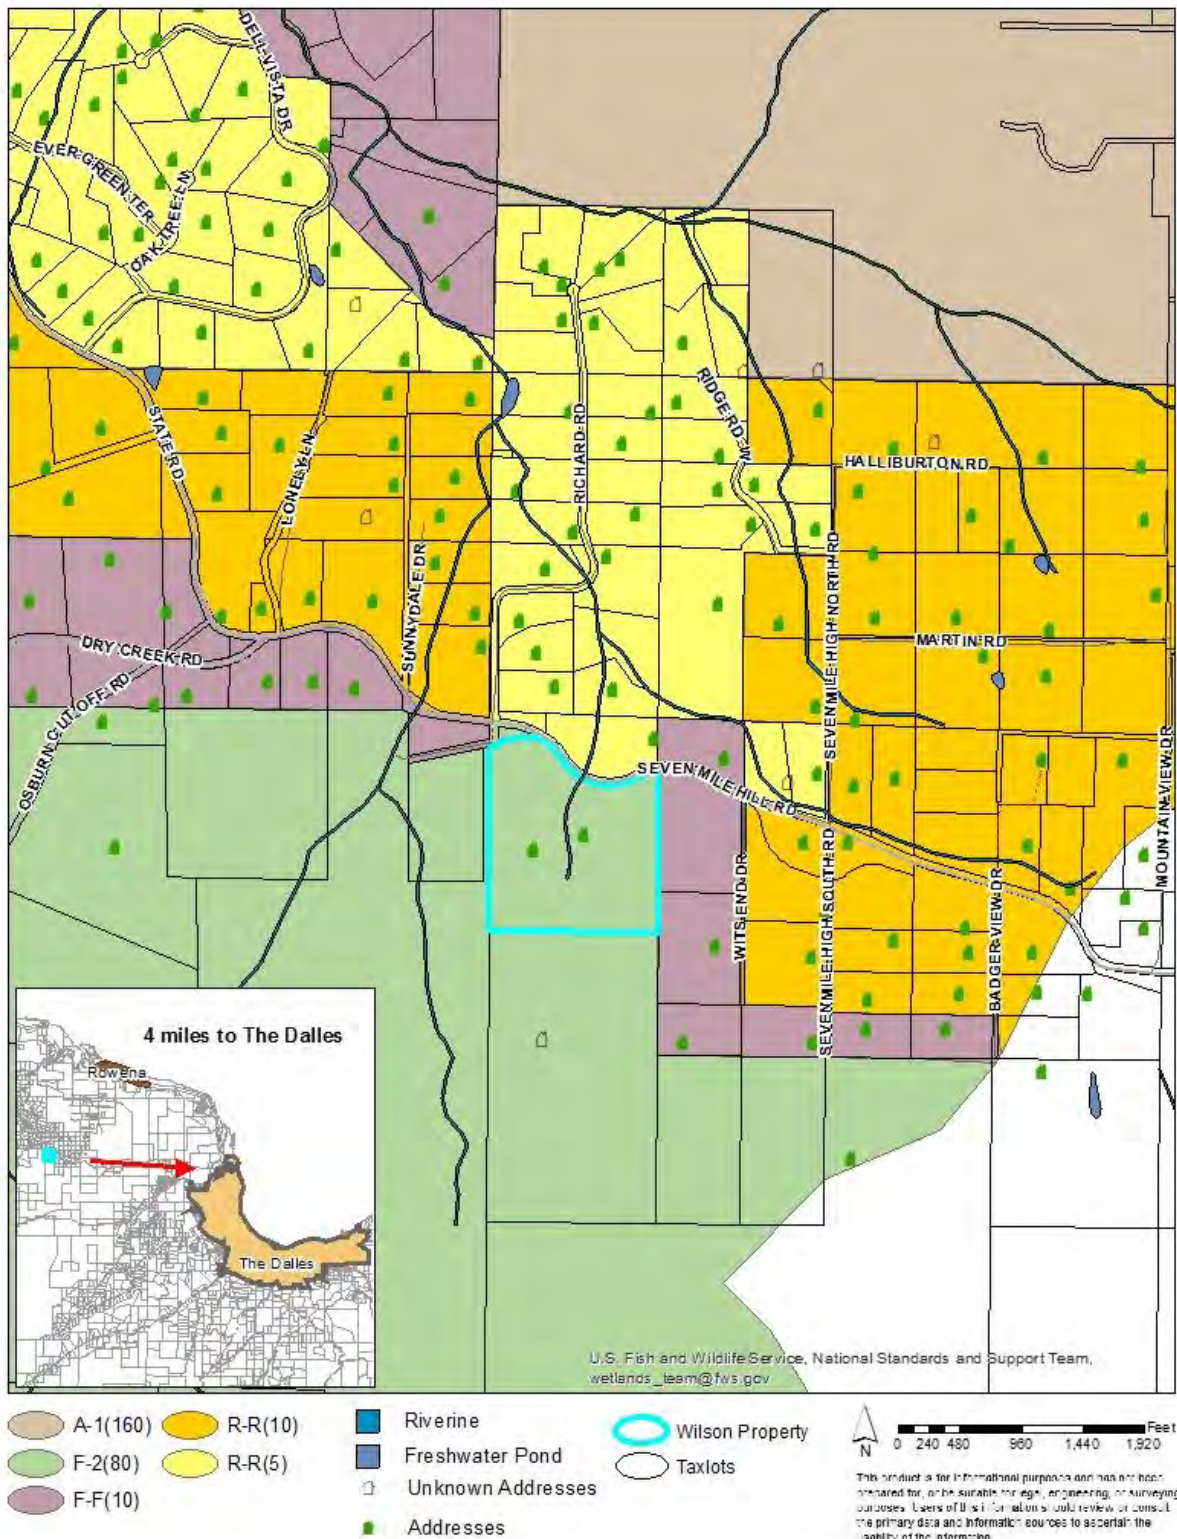

The full staff report with all proposed findings of fact and conclusions of law can be viewed online (at [http://www.co.wasco.or.us/departments/planning/active\\_landuse\\_applications.php](http://www.co.wasco.or.us/departments/planning/active_landuse_applications.php) - the actions table is sorted alphabetically by the name of the applicant/owner. The information will be available until the end of the appeal period) as **Attachment C** and will be available for public review at the Wasco County Planning Department for review at least 20 days prior to the June 5, 2019 hearing. The full staff report is made a part of the record. This summary does not supersede or alter any of the findings or conclusions in the staff report, but summarizes the results of Staff's review and recommendation.

#### **PLANNING COMMISSION RECOMMENDATION**

On April 2, 2019, the Planning Commission reviewed Staff's report, heard from the applicant, and members of the public, and decided to recommend **APPROVAL** of this request for a Zone Change, Goal Exception, and Comprehensive Plan Amendment.

Section 9.070 - Notice of Planning Commission Recommendation

Section 9.080 - Action by County Governing Body

## **II. BACKGROUND INFORMATION**

- A. Legal Parcel:** The subject parcel was legally created by Partition PLAPAR-17-05-0002 recorded with the Wasco County Clerk on September 8, 2017. The subject parcel is considered to be legal because it meets the LUDO Section 1.090 definition of a (Legal) Parcel as it is a parcel in an existing, duly recorded partition.

### **B. Public Facilities and Services**

1. Transportation: The subject property lies south of Sevenmile Hill Road southeast of its intersection with Richard Road, approximately ½ mile east of the intersection of Sevenmile

Hill/State/Dry Creek Road. Roads. Access to the subject property is from Sevenmile Hill Road.

The 2009 Wasco County Transportation System Plan (TSP) provides the following information for Average Daily Trips (ADT) and Volume/Capacity (V/C):

	Functional Class	ADT 2009	V/C ratio from TSP
State Rd	RC Rural Major Collector	480	0.01
Dry Creek	RK Rural Minor Collector	78	n/a
Osburn Cut-off	RL Rural Local	51	n/a

The Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7):

*Capacity for State Rd/7-Mile Hill Rd      1,500/day*

According to the latest version of the Institute of Transportation Engineers (ITE) Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use Code 210). The zone change could potentially add three dwellings to the area's traffic load, producing approximately 29 new ADT at maximum build-out. The 2009 TSP predicted an ADT of 600 by 2030 with a Volume/Capacity (V/C) ratio of 0.03 for State Road (at Sevenmile Hill Road). Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the County used the Oregon highway Plan (OHP) mobility standard of 0.70 as a comparison figure. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of three dwellings would not cause the V/C ratio to rise above 0.70. The TSP predicted that it would only hit 0.03 by 2030 at 600 ADT, so even if it was 629 ADT at that time, that would not approach 0.70. Using that mobility standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

2. Water and Sewer: There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A Geologic Survey was published in 1996 as part of the TLSA study (see below under Land Use History) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities at the time. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Exhibit 4, the TLSA Study Area Ground Water Evaluation – Wasco County, Oregon, Jervey Geological Consulting ("Groundwater Study") at pages 12-13.) The predominant source of water in this area is from wells. The general conclusion of the 1996 groundwater study was that this area had capacity to support additional residential development. The study also recommended that groundwater levels be periodically monitored to assess the impact of ongoing rural development.

Water resources for residential use in this area do exist, but they are being closely monitored by the Oregon Water Resources Department, as recommended by the TLSA

study. According to an October 12, 2018 email between staff and Watermaster Robert Wood, “Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average”. The Oregon Water Resources Department is “not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn’t available within the capacity of the resources.” He stated that those uses that are exempt from water rights, such as “single or group domestic use, irrigation of no more than ½ acre lawn/ noncommercial garden, stock use” are still being allowed but that new rules are in place requiring more stringent well construction.

There are no public sewer facilities available in the area. Each of the three potential single family dwellings would be required to handle its own sewage as required by law. At the development stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

3. Electricity: Wasco Electric Co-op power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence already located on the subject property.
4. Fire Protection and Prevention: The subject property is within the Mid-Columbia Fire and Rescue District boundaries. The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies. Any future development proposals will be required to comply with Wasco County LUDO Chapter 10 Fire Safety Standards.

### C. Land Use History:

#### *Transitional Lands Study Area (TLSA) Project*

In 1993, Wasco County began work on the Transition Lands Study Area Project (“TLSA”) in response to concerns about development in northern Wasco County, and particularly in the area surrounding the parcels in this current proposal, known as the Sevenmile Hill area. The concerns included “availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area.”

The first phase of the TLSA was a groundwater study. The initial study was published in December 1996 as the “TLSA Ground Water Evaluation, Wasco County, Oregon” by Jervey Geological Consulting (The Groundwater Study”). On September 12, 1997, the final report for the TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the properties in this current proposal were rated “L/H,” meaning that they scored low for Resource Values and high for Development Values (with the exception of the northern part of parcel 2900, which was rated H/H, or having high scores for both Development Values and Resource Values).

The final Recommendation of the TLSA for the Sevenmile Hill area included the following:

- *Retain the existing R-R (5) and A-1 (80) EFU zoning.*
- *Retain the existing F-F (10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).*
- *Rezone the remainder of the F-F (10) lands to R-R (10). F-F (10) areas would be able to transfer development rights to the area identified as the test area.*

No mention is made in this report of how F-2 land should be addressed. After the TLSA study, eight parcels of F-F (10) land in the Sevenmile Hill area north of the subject property were converted to R-R (10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). The County has approved single family dwellings that have subsequently been built on many properties along Seven Mile Hill Road near the proposed exception area.

### *Betzing Appeal*

The County's approval of dwellings south of Sevenmile Hill Road in recent years and the rezoning of portions of the Sevenmile Hill area (in the proximity of the Wilson property) were contentious in the late 1990s. Several appeals were filed by a Mr. Kenneth Thomas, one of which was for a property owned by Mr. Joseph Betzing. Mr. Thomas is a member of the Society of American Foresters, and owns and manages approximately 1100 acre tract of timberland south of the proposed exception area. The appeals were heard by the Oregon Land Use Board of Appeals (LUBA).

One of Mr. Thomas' central concerns was that rural residential development is generally incompatible with commercial forestry—that the approval of additional dwellings south of Sevenmile Hill Road would increase the fire risk for his commercial forest lands to the south and increase the chance that a forest fire in the commercial forest lands would spread to abutting residences and pose a risk to the community.

The LUBA record of hearing (1997-98), and findings leading to the eventual approval of a dwelling on a 5.1 acre parcel south of Sevenmile Hill Road and abutting the subject property (applicant Joseph Betzing), indicated that the area in which the subject property is located is subject to high wind gusts as well as stable high wind patterns. The area is characteristically dry and subject to drought, which leads to high mortality in forest stands. That record also indicated that the Oregon Department of Forestry (ODF) has identified the area as one of particularly high fire risk during the fire season, and has repeatedly identified residential and associated buildings as significant fire hazards. ODF also testified that "dwellings increase the risk of fire, restrict control tactics, complicate the protection priorities and require additional coordination that result in increased cost." (Betzing Record, page 230.)

### *Settlement Agreement and 2013 ZNC/CPA/EXC decision*

To try and address multiple LUBA cases and find solutions, a Settlement Agreement was entered into on January 5, 2000, between the County Planning Director, the appellant Kenneth Thomas, and applicant Joseph Betzing. The settlement was based on a mutual understanding that the area south of Sevenmile Hill Road included land that was already built (with existing residences), and committed (through existing plan and zone designations and development approvals) to

low-density rural residential uses. The logical boundary, separating commercial forestry uses from built and committed residential areas, was identified as the Bonneville Power Administration Transmission Line Easement also known as “Bonneville - The Dalles Line.” The BPA easement area is maintained clear of trees, and acts, because of its width and scarification, as a significant physical break between rural residential uses in the Sevenmile Hill Road area and commercial forestry uses to the south. It was thought that the powerline right-of-way/easement area would separate and therefore mitigate the potential fire impacts associated with low-density residential uses in the Sevenmile Hill area.

Relevant terms of the Settlement Agreement state:

*“The County Department Staff, acting in good faith shall use best efforts in supporting a legislative zone change and comprehensive plan change to modify the zoning and comprehensive plan designation of the property marked in Exhibit A, from F-2 to FF-10.” Exhibit 5, p. 1.*

*To institute these recommended changes, the county’s comprehensive plan should be amended, to take an exception to Goal 4 and to recognize that the area has changed enough to require a new plan designation. The new designation should permit not just small-scale forest-farm uses, but also low-density rural residential use. In this circumstance, the proposed zoning designation is Forest-Farm, with a ten-acre minimum lot size. Residential use of the area in conjunction with forest or farm uses is allowed outright on parcels meeting the minimum lot size, and otherwise, only subject to a conditional use permit. To further promote the goal of protecting commercial forestry in the area, a Limited Use, Forest Protection Overlay Zone, will require clustering of any proposed dwellings toward the northern portion of the area adjacent to existing residential lots and close to existing road access, and establish additional fire prevention standards and conditions. These measures will improve the utility of the subject property to serve as a buffer between rural residential uses in the area and commercial forestry uses to the south.”*

To implement this change, and by resolution of the County Court, staff proposed a Comprehensive Plan Amendment, Goal Exception, Zone Change, and LUDO Amendment proposal in 2013 sought to apply F-F(10) zoning to all or a portion of eight parcels (totaling approximately 287 acres), including the subject parcel of this application, all of which were (and still are) zoned F-2. This action would have allowed potential development of a maximum of 22 rural residences in an area south of Sevenmile Hill Road (County Road 507) and Dry Creek Road (County Road 405), and north of the southern boundary of Bonneville Power Administration’s (BPA) Bonneville - The Dalles Line right-of-way/easement. That right-of-way/easement would have functioned as a physical divider between existing rural residential development and suggested new F-F (10) lands on the one hand, and the commercial forestry lands south of the easement on the other.

After a 4-3 Planning Commission vote to recommend approval to the Board of County Commissioners, the Board voted 2-0 to deny the proposal (PLALEG-13-08-0002). A review of the application materials, comments, reports, and the minutes of that meeting indicates that the major concerns were fire safety, and water supply.

### III. FINDINGS

#### A. State Laws – Oregon Administrative Rules and Oregon Revised Statutes

##### 1. Introduction

*In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.*

*Statewide Land Use Planning Goal 4, "Forest Lands" is:*

*"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."*

ORS 197.732(2) states, in relevant part:

*(2) A local government may adopt an exception to a goal if:*

- (a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]*
- (b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;*

*\* \* \**

- (4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (2) of this section have or have not been met.*
- (5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.*

*\* \* \**

- (8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:*
  - (a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;*

*(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and*

*(c) Complies with standards under subsection (1) of this section.”*

Planning Goal 2, part II, states:

*A local government may adopt an exception to a goal when:*

*(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]*

*(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”*

**FINDING:** Both the goal and OAR 660-004-0005(1)(c) adopt the legislative definition of an “exception” with minor variation— the goal states “Complies with standards for an exception” and the rule states “Complies with. . . the provisions of this division.” OAR 660-004-0010(1) explains, “The exceptions process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” and includes “Goal 4 ‘Forest Lands.’”

Goal 4 provides that: “Where a ... plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

Rule definitions of “resource land” and “nonresource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be planned and zoned for forest-farm uses, a rural residential, nonresource category of uses under the County’s plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC’s rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state’s forest land base. These reasons are addressed below.

## **2. Exception Requirements for Land Physically Developed to Other Uses.**

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

*OAR 660-004-0025 states:*

*(1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)*

(2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** The subject parcel has several features that lead it to be “Physically Developed.” A driveway runs along the western property line, accessing the single family dwelling and accessory structure on the western portion of the parcel, as well as providing access to the single family dwelling located on the parcel directly to the south (also owned by the applicant). In the center of a property, an old farm house stands (no longer used as a dwelling), with an additional driveway feature bisecting the property. In this area there are further accessory structures including a pump house and an old barn. The property is served by two wells. Two wells would be capable of serving four dwellings as each well is permitted to serve two dwellings each. The applicant submitted well records for these to demonstrate their capacity. To determine the extent to which the property is physically developed, staff compared where driveways and existing structures are, and identified them in the following map:

Figure 1: Development

This map demonstrates that currently approximately 12.5% is physically developed. That leaves 87.5% available for farm or forestry uses. These numbers are for discussion purposes and to estimate what is currently physically developed, and what is not (but may still be used by the landowner for farm or forest uses). Although most of the County's commercial timber use occurs in National Forests or in lands owned by large lumber companies such as Weyerhaeuser or SDS, small woodlots owned by individuals and small families play a vital role in the industry as well. These lands are often those that abut or intermingle with rural residential uses, and in many cases the tax benefits can be the only way to afford to successfully manage (for both fire safety as well as timber harvesting) several dozen acres of woodland that may accompany that rural residential life style. Collectively across Oregon, many thousands of acres of forested lands are owned in these small parcels, and Goal 4 seeks to protect them from the effects of rural sprawl. A woodland as small as two acres qualifies for Oregon's Special Assessment Program for Forestland, allowing landowners to have a reduced property tax assessment. With 87.5% (35 Acres) of undeveloped land on the subject parcel, this land could still be useful under Goal 4 provisions. However, whether that land is capable of supporting commercial timber production depends heavily on other factors such as available soil type and slope.

### *Soils*

Two soil types are identified on the subject parcel: 49C and 50D (Wamic Loam – see Exhibit 5). Both are Class IV soils. The "Guide for using Soil Survey Single Phase Interpretation Sheets" (also known as the Green Sheets – See Exhibit 6) states that Class IV soils "have very severe limitations that reduce the choice of plants, require very careful management, or both". The Green Sheets maintains statistics on capability and yields per acre of crops and pasture, woodland suitability, windbreaks, wildlife habitat suitability and potential native plant community. These categories and the ratings for these two soil types are relevant to how well this property may be able to fulfill the requirements of Goal 4: Forest Lands by conserving forest lands for forest uses.

- Capability and yields per acre of crops and pasture (high level management)
  - Both soil types are listed as 4e (Class 4 which has "very severe limitations that reduce the choice of plants, require very careful management, or both", Subclass e which indicates that the main limitation is risk of erosion unless close-growing plant cover is maintained). Both soil types have Winter Wheat (35 bushels/acre) and Grass Hay (1.5 tons/acre) listed.
- Woodland Suitability
  - Both soil types are listed as 4A (Class 4, discussed above, and subclass A which represents slight or no limitations). For both soil types four out of five management problem categories are listed as having 'slight' or 'moderate' problem potential with plant competition the only one rated as 'severe' in both. Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover. Common trees on these soil types are Ponderosa Pine and Oregon White Oak with Ponderosa Pine listed as the only tree to plant. The site index for both is 70 which is an indication of the potential productivity and is based on the average total height of the stand the age of 100 years. A site index of 70 translates to the high end of Cubic Foot Site Class 6 (20-49 cubic feet per acre potential yield category) for Ponderosa Pine.
- Windbreaks
  - For both soil types the Green Sheets indicate "none" for Windbreaks. This states that windbreaks are not normally needed.
- Wildlife Habitat Suitability

- This section relates soils to their potential for producing various kinds of wildlife habitat. For both soil types under “potential for habitat elements”, hardwood and conifer trees are both rated as Fair. Under potential as habitat for: Woodland wildlife, the rating is also Fair.
- Potential Native Plant Community
  - For both soil types the same five grass and shrubs are mentioned as common, as well as two types of trees – Oregon White Oak and Ponderosa Pine.

A soils map is attached as Exhibit 7 (soil descriptions and their guide are contained in Exhibits 5 and 6).

### *Slope*

The property is mostly flat from the north to the center rising gradually from there to the south, east, and west. Slopes from the road to the southern property line average 6-10%. The low point of the parcel is in the northwest corner at about 1550’ in elevation, 100’ lower than the house at about 1650’ and 210’ below the high point to the southeast at 1760’. There are no slopes on the property that are too steep for either residential development or commercial forestry.

The vegetation of the subject parcel is split between open grassland in the north and center, with primarily Oregon White Oak interspersed with Ponderosa Pine, and a very few Douglas Fir around the edges of the property. Grasses and shrubs create moderately dense underbrush throughout.

The soils indicate some suitability for agriculture and there is history of such on both this parcel and the parcel to the south, also owned by the applicant (See below in b. OAR 660-004-0028 (2) for more detailed information about adjacent lands). The home on the applicant’s adjacent southern parcel was approved in 1989 through the Conditional Use Permit process as a “Dwelling in conjunction with agricultural use.” Additionally, an agriculture structure was placed on that southern parcel several years ago and retroactively approved through a Planning Commission action in 2017 (PLAAPL-17-10-0001). Discussions in the staff report for that decision, as well as application material including a Farm Management Plan, state that a portion of the parcel to the south is currently used for farm use, producing approximately 6 acres of alfalfa/oats, five poultry, and three cattle (seasonal), with plans upon the owners retirement to expand the farm use.

On the subject parcel itself, aerial imagery on County GIS (accessed November 8, 2018) appears to indicate several acres of crops in the western half of the open area at the center of the property. Beyond the three seasonal cows reportedly used on these parcels recently, the proposed exception area does not have a known history of commercially grazing for sheep or cattle.

The following Finding was made for the 2017 application in regards to agricultural use on the southern parcel in the tract:

*“According to Melanie Brown, Appraiser, the subject parcel is required to generate a minimum income of \$3,000 per year. She stated that the Assessor sends out a questionnaire every three years to determine what income has been generated from farm use. Assessor records indicate that the subject parcel has exceeded the income requirement for the past several years...”*

The development pattern that exists on this property makes forestry uses impractical. These include the current home and outbuildings located halfway up the property on the western side after an approximately 1,000’ driveway, the old farmhouse in the center after a 400’ driveway and the old barn another 240’ further south, within 450’ of the rear property line. The latter two more than half bisects the property contributing to the physically developed nature of the subject parcel. The property is also

served by two wells, and a pump house located in the north central portion of the parcel, approximately 190 feet south of the road. Due to these physical developments, and the impracticality of conducting forestry uses around them, a physically developed exception would apply.

**3. Exception Requirements for Land Irrevocably Committed to Other Uses.**

*OAR 660-004-0028 contains standards for adoption of a “committed” exception.*

**a. OAR 660-004-0028(1):**

*(1) A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:*

*(a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;*

*(b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;*

*(c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.*

**FINDING:** This applicant proposes a ‘committed exception’ for this property, which is the ‘exception area’. The proposed goal exception applies to land in the Forest zone (F-2) and the ‘applicable goal’ that currently applies to these lands is Goal 4: Forest Lands.

An exception to remove this parcel from the forest zone and transfer it to a non-resource “Farm-Forest” (FF) zone would still promote and permit many of the uses allowed in Goal 4 designated areas. More importantly, granting the request will promote economically efficient forest practices on large forested tracts south of the subject property, in a manner more consistent with sound management practices.

**b. OAR 660-004-0028(2):** *“Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:*

*(a) The characteristics of the exception area;*

**FINDING:** The characteristics of the exception area are fully discussed in the findings above in response to OAR 660-004-0025.

*(b) The characteristics of the adjacent lands;*

**FINDING:** The parcels immediately adjacent to the exception area have substantially similar characteristics for terrain and soil types (See Exhibit 7, Soils map, and Exhibit 8, Submitted Maps). North of Sevenmile Hill Road and West of the Osburn Cutoff Road, the land is at a lower elevation and has fewer trees.

The areas to the north and east of the proposed exception area have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the four subdivisions in the area, three were platted in the early part of the 20th century, and the fourth in 1979 (Fletcher Tract-1908; Fairmont Orchard Tracts-1911; Sunnysdale Orchards-1912; Flyby Night Subdivision-1979). For three of these subdivisions, the majority of the lots are approximately 5 acres in size. The county has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Between 1994 and 1997, the exception area and the lands surrounding it were included in what Wasco County collectively designated as the "Transition Lands Study Area" (TLSA). The county performed an analysis of the area, in part to determine where rural residential development would be appropriate. The final report for the TLSA was published on September 12, 1997, (Exhibit 1) and included recommendations outlining the sub-areas within the study area that were suitable for residential development. The exception area and the lands to the north and east were determined to be suitable for further rural residential development. Certain zone changes have been processed as part of the TLSA program to further the development of residential uses in the area surrounding the exception area.

The exception area is surrounded on two sides (north and east) by residential development and land zoned for rural residential development, under the three non-resource rural residential zoning designations, R-R(10), R-R(5) and F-F(10). The parcel immediately to the south is zoned for forestry uses, but is used for residential and small scale agricultural uses. Lands south of that, and immediately west of the subject parcel and proposed exception area are generally used for commercial forestry. See the map below for a visual representation of the area.

The immediately adjacent lands on both sides of Seven Mile Hill Road are all zoned for and mostly used for residential purposes. This parcel of F-2 is the only such parcel of Forest land on all of Seven Mile Hill Road. All other parcels along Seven Mile Hill Road are already F-F (10), or are Rural Residential zoning, with 5 or 10 acre minimum parcel sizes. This demonstrates how irrevocably committed the area is to residential use.

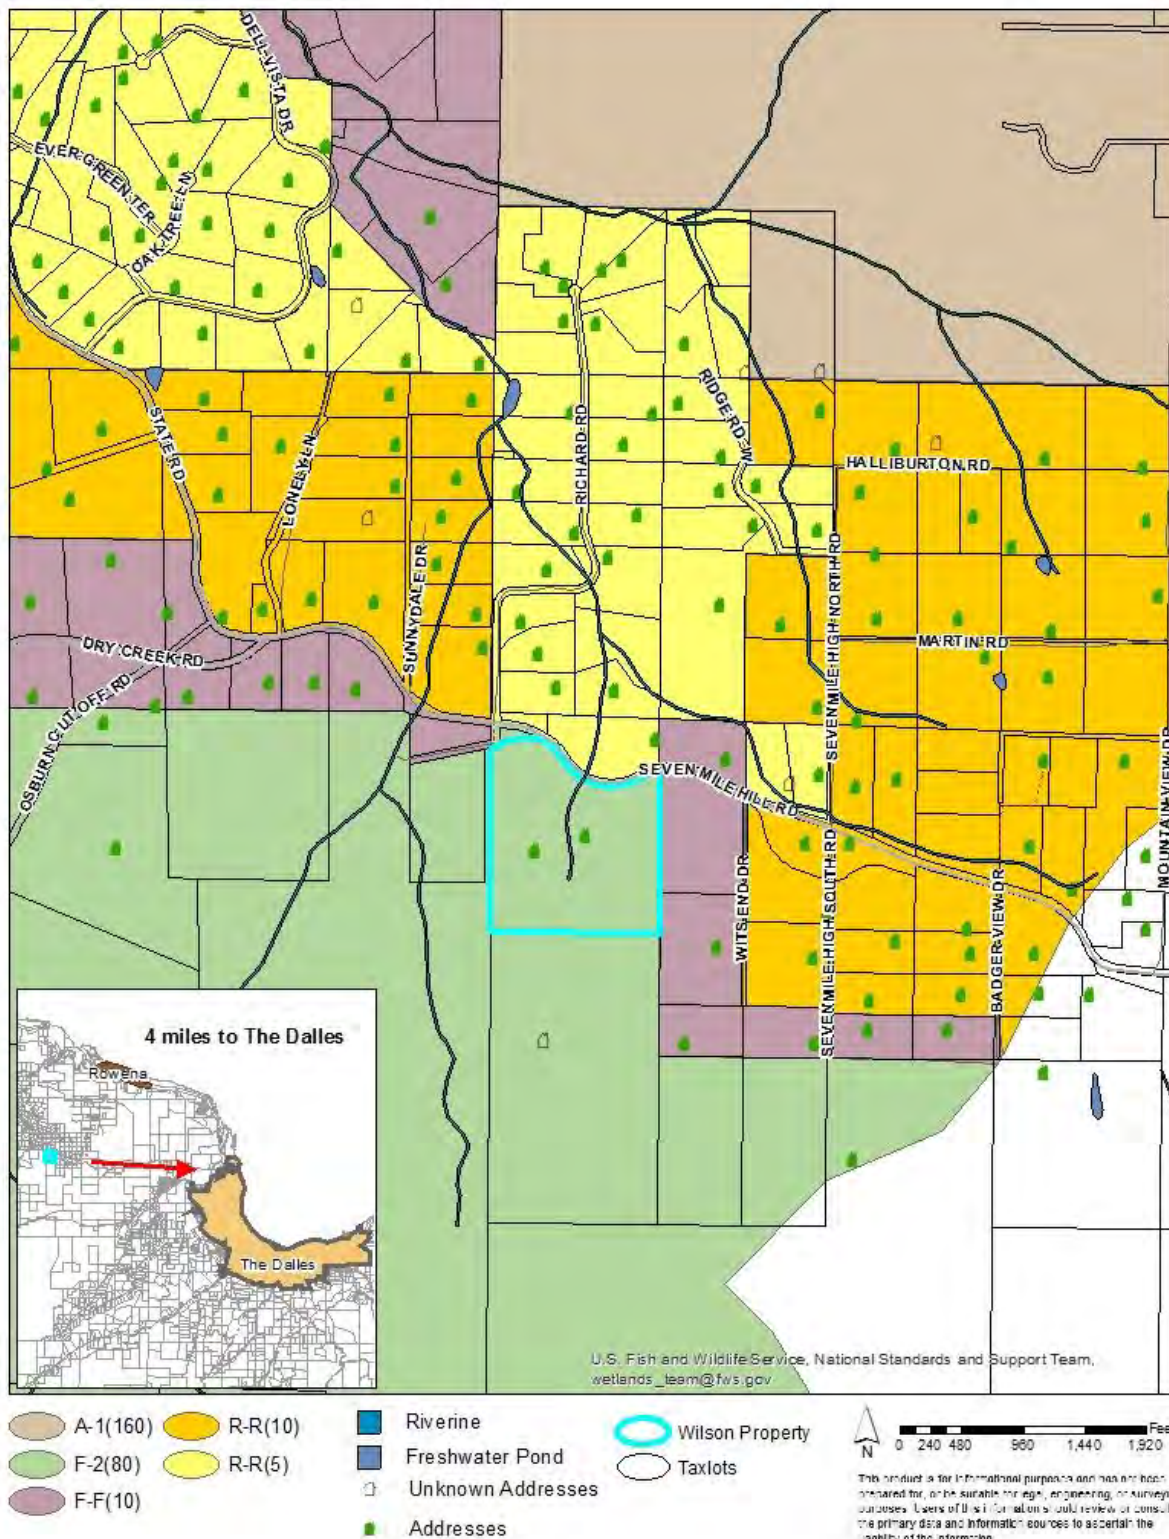

Figure 2: Wilson Vicinity Map

**East:** Directly to the east, north east, and south east of the proposed exception area are three parcels zoned F-F(10): T2N R12E, Section 22, Lots 4700, 4300, and 4200. Two of these lots abut the eastern boundary of the subject parcel, and the third is just across Sevenmile Hill Road to the north. Two of the three lots have residences.

The three abutting rural residential lots to the east are part of a small rural subdivision called Fairmont Orchard Tracts, filed August 5, 1911. The subdivision is located entirely in the SW quarter of Section 22, Township 2 North, Range 12 East. It was originally composed of nine lots, Lots 1-6 and Parcels A, B, & C. The numbered lots were generally to the south of Sevenmile Hill Road, oriented in a north-south rectangle, while the lettered parcels form a flagpole on the north side of Sevenmile Hill Road, running west to the western boundary of the section. The lot sizes ranged from 6.08 Acres to 13.22 acres on the original plat, making the average lot size 9.66 acres. Over time, three of the original lots have been partitioned into smaller lots, resulting in 12 lots, the smallest being 0.75 acres. The average size is now 6.85 acres.

There are three zoning designations covering the area east of the exception area, F-F (10), R-R (10), and R-R (5). After 0.6 mile, the National Scenic Area boundary begins, with zoning designations of predominantly (GMA) A-1 (160). In 1999, Wasco County revised the zoning of the lots 0.1 mile east of the subject parcel, changing them from F-F (10) to R-R(10). (County Ordinance 99-111, amending Ordinance 97-102) According to goals established in the TLSA project, the change in zoning was part of a process seeking to allow the expansion of rural residential uses in this 'transition' area between the more developed areas to the north and the large scale forestry/agricultural uses to the south. These zone changes were objected to and appealed, partly on the basis that they were likely to diminish the buffer between commercial forestry and rural residential uses in the area and increase conflicts between those uses. (LUBA appeal No. 99-178)

**North:** Immediately north, but still on the south side of the road and zoned F-2 (80), is a vacant 0.7 acre triangular parcel owned by the County that covers the piece of land between the old Seven Mile Hill Road and the current Seven Mile Hill Road. Across the road to the north are two lots that were also part of the Fairmont Orchard Tracts subdivision discussed above. These lots are 0.7 acre (vacant, owned by Wasco County) and 7.9 acres (single family dwelling with associated accessory structures). Both of these lots are in R-R (5) zoning.

The Fly-By Night subdivision lies north of the Fairmont Orchard Tracts subdivision. Three parcels were reconfigured in a partition plat in 2017. All lots due north of the subject property for 0.8 mile are zoned R-R (5). After that the land becomes A-1 (160) exclusive farm zone for another 0.8 mile until it reaches the National Scenic Area boundary.

Property to the northeast is discussed above. To the northwest lies the Sunnydale Orchards Subdivision. All lots in this subdivision north of Seven Mile Hill Road are in R-R (10) zoning, and those south of and along the road are F-F (10). The majority of this subdivision is developed with single family dwellings and associated accessory buildings. North of Sunnydale Orchards there are other subdivisions with both F-F (10) and R-R (5) zoning.

All of the area north of the proposed exception area is built and committed to low and medium density rural residential uses in these two platted subdivisions: Sunnydale Orchards and Flyby Night.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less

than ten acres each. The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions.

The area to the north is the most heavily developed area surrounding the proposed exception area. As can be seen in the map above in Figure 2, virtually all lots to the north of the exception area have been improved with a residence or a manufactured home, with few exceptions.

**West:** There are two properties immediately adjacent to the proposed exception area to the west. The northern parcel is 16.3 acres, with the north 1/3 zoned F-F (10) and the southern 2/3 zoned F-2 (80). This property is not developed. The adjacent property to the southwest of the subject parcel is 439 acres, and is in commercial forestry, owned by Ken Thomas. F-2 (80) zoned land stretches almost a mile due west of the subject parcel, across Osborn Cut-Off Road, before it reaches the Fletcher Tract subdivision with F-F (10) zoning. The majority of that area with F-2 (80) zoning is undeveloped, with the exception of three single family dwellings along Osborn Cut-Off Road.

Fletcher Tract was recorded on June 6, 1908 and contains a total of 32 parcels, almost all roughly 5 acres each. The lots are oriented in two long north-south columns of 16 lots each, with a north-south roadway between the two columns. The roadway north of Dry Creek Road was vacated in 1977, but a private road still exists. The portion of this platted road south of Dry Creek Road has never been developed (according to aerial photographs), although there are some private access roads leading to the developed parcels. For the purposes of this report, information was collected on 11 lots in the subdivision. Most of the lots have remained separate 5-acre parcels, but a few have been combined under single ownership into larger lots (Tax lots 1000, 2200, 700, 2600, 2700). The 15.29-acre lot (Lot 1000) is the largest parcel in the Fletcher Tract.

The current zoning for the entire Fletcher Tract is F-F (10). Beyond the subdivision to the west and south are large parcels zoned F-2 (80). According to Planning Department records, the Fletcher Tract has been zoned F-F (10) since the implementation of zoning in the county.

Several of the lots in the Fletcher Tract are in common ownership forming larger tracts, more in keeping with smaller, 10-15 acre woodland lots. When looking at them as individual lots, the majority have no improvements. However, in the area south of Dry Creek Road, five of the lots in the 'eastern column' are in common ownership (Tax Lots 900, 1000 and 1100, covering subdivision Lots 9-13), with a residence on one of those lots. Similarly, three of the lots in the 'western column' are in common ownership (Tax Lots 2100, 2200 and 2300, covering subdivision Lots 20-23), with a residence on two of them. Considering this pattern of use, the majority of the land area is dedicated to non-resource, residential uses. Additionally, because the establishment of the lots predates zoning in the area, each 5-acre parcel could conceivably be developed with a rural residence.

**South:** The area directly adjacent to the exception area to the south is one 69 acre parcel, also owned by the applicant and bisected by a BPA power transmission line running southeast to northwest. There is a single family dwelling and several accessory structures on this parcel, which is zoned F-2 (80). No commercial forestry occurs there. Continuing further south, land is zoned F-2 (80) for approximately 5 miles (crossing Chenoweth Creek Road after 1.5 miles) until it runs into the F-F (10) zoned areas surrounding Wells Road southwest of The Dalles. That region is undeveloped, with the exception of two parcels along Chenoweth Creek Road, and is primarily being managed for forestry or large scale agricultural (mostly grazing) uses.

*(c) The relationship between the exception area and the lands adjacent to it;*

**FINDING:** As described in preceding sections of this submittal, the exception parcel is immediately abutted to the south and west by F-2 (80) Forest zoned property (69 and 439 acres), to the north across Seven Mile Hill Road by R-R (5) Residential zoned property (7.9 acres), and to the east by F-F (10) Farm Forest zoned property (averaging 10.8 acres). The properties to the south and south west are resource zones while those to the north, north west, and east are non-resource zones.

All are in separate ownerships, except the 69 acre F-2 parcel to the south, which is also owned by the owner of the subject property of this application, David Wilson. Combined with the subject parcel that is a 109 acre tract of resource zoned Forest land. There is another home on the southern property and a shop that is utilized by the applicant for farm use (according to information from previous Land Use decisions found in PLAAPL-17-10-0001 and PLAPAR-17-05-0002) on the southern property. The southern parcel is accessed by the same driveway that accesses the existing home on the subject property, running along it's western edge.

The County GIS map shows that the western boundary of the subject parcel abuts a narrow spur of the larger 439 acre commercial forestry operation to the south west of the two parcels owned by David Wilson. That spur appears to be able to provide access to Seven Mile Hill for that forestry operation. Immediately to the west of that is the 16 acre parcel described in (b) above as being 1/3<sup>rd</sup> F-F and 2/3 F-2 zoned property. That parcel abuts Seven Mile Hill Road but current access is shared along the northern 120 feet of the subject parcel's driveway. No dwellings exist on that property.

The subject property does not have any special relationships with the other non-resource properties adjacent to it, however, it is unique in its zoning. It is the only parcel on all of Seven Mile Hill Road that is zoned F-2 (80), Forest. All other parcels are either already the non-resource zone, F-F (10), or else are zoned Rural-Residential with five and 10 acre minimum lot sizes. This creates a unique situation where the subject parcel is enclosed on three of its sides by residentially zoned properties, most of which are used for residential purposes. If the subject parcel was used for a forestry operation it could be potentially disruptive to this residential community. This area is irrevocably committed to a residential use, and changing the zoning of the subject parcel to the same would enable this status quo to continue, limiting potential conflict with any future resource use at this location.

*(d) The other relevant factors set forth in OAR 660-004-0028(6).*

**FINDING:** These factors are discussed below.

- c. OAR 660-004-0028(3): "Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is 'impossible.' For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;*

*(a) Farm use as defined in ORS 215.203;*

(b) *Propagation or harvesting of a forest product as specified in OAR 660-033-0120;*

(c) *Forest operations or forest practices as specified in OAR 660-006-0025(2)(a)."*

**FINDING:** This application seeks an exception to Goal 4: Forest Lands, where the primary goal is to "conserve forest land for forest uses".

ORS 215.203(2)(a) states:

"[F]arm use" means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. "Farm use" includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. "Farm use" also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. "Farm use" also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. "Farm use" includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. "Farm use" does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including "farm use" and "propagation or harvesting of a forest product," and OAR 660-006-0025(2)(a) states:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

The "forest products" definition can be found in ORS 532.010(4), which states that forest products are "any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores." An examination of Farm Uses and their potential on this property are also relevant as indicated by OAR 660-004-0028(3) above. There are currently agricultural practices occurring on the subject parcel and the adjacent property to the south in the same ownership tract as described above in *OAR 660-004-0028(6)(c)(B)*. The uses on the adjacent tract in the same ownership are relevant due to a requirement to examine *"the relationship between the exception area and the lands adjacent to it"* when examining a potential irrevocably committed exception as discussed above in OAR 660-004-0028(2).

OAR 660-006-0025 describes those "Uses Authorized in Forest Zones". An exception granted to this goal may have an impact on these types of uses. This OAR describes five (5) general types:

"(a) Uses related to and in support of forest operations;

(b) Uses to conserve soil, air and water quality and to provide for fish and wildlife resources, agriculture and recreational opportunities appropriate in a forest environment;

(c) Locationally-dependent uses, such as communication towers, mineral and aggregate resources, etc.

(d) Dwellings authorized by ORS 215.705 to 215.755; and

(e) Other dwellings under prescribed conditions”

In regards to (c), no aggregate sites have been identified on this property, nor is there anything about it's location that makes it significant for communication towers. In regards to (d) and (e) there is currently an existing dwelling on the parcel, with no potential for further dwellings under current rules in the Forest Zone. That leaves (a) and (b) as the primary uses which must be safe guarded on this property in accordance with Goal 4: Forest Lands.

The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means “not capable of being carried out in practice,” according to Webster’s New World Dictionary (2nd College Ed., 1980). “Capable” means “having ability” or “able to do things well.” Id. Finally, “in practice” means by the usual method, custom or convention. Id. Webster’s Third New International Dictionary, (Unabridged Ed., 1993) defines “impracticable” as “**1a** : not practicable : incapable of being performed or accomplished by the means employed or at command : infeasible \* \* \* **c** : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*”

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice in the exception area. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

The current level of residential development has increased to the point that commercial resource use has become impracticable. The exception area is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that competes with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable. To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the suitability of the area for farm uses. Due to the existing parcel size, climate and development in the area, it cannot be, and is not, currently employed for the primary purpose of obtaining a profit from agricultural uses, though small scale farm uses do exist on the property and that of the same tract to the south. The area can support these small-scale, “peripheral”

farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

- d. OAR 660-004-0028(4): "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."*

**FINDING:** All applicable factors of section (6) are addressed below. The applicant's statement and exhibits address all applicable factors and reasons why the facts support the conclusion that uses allowed by Goal 4 are impracticable in the exception area, as described throughout this report.

- e. OAR 660-004-0028(5): "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands."*

**FINDING:** The proposal is for a goal exception, zone change, and comprehensive plan amendment for one parcel. This parcel makes up the entirety of the "exception area". This parcel is physically developed as described above. Findings of fact and a statement of reasons why this land is found to be irrevocably committed are discussed throughout this report.

- f. OAR 660-004-0028(6): Findings of fact for a committed exception shall address the following factors:*

*(a) Existing adjacent uses;*

**FINDING:** The existing adjacent uses are discussed and considered in great detail in sections 2.3.3 and 2.3.4, above. Existing adjacent uses to the north and east are residential, and zoned as such. (see Map above, Figure 2) The land immediately to the south is zoned for forest, but used as residential. The remainder of all land south and south west of the subject parcel is zoned for, and used as, commercial forestry.

*(b) Existing public facilities and services (water and sewer lines, etc.);*

**FINDING:** There are no public water or sewer facilities on either the adjacent land or the exception area. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities. See prior findings under Chapter 11, Section H regarding statewide planning goals.

*(c) Parcel size and ownership patterns of the exception area and adjacent lands:*

*(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads*

*and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”*

**FINDING:** As discussed in great detail above and in the attached exhibits, some of the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the exception area were not successful because of the cold and dry weather at this location and elevation. Most of the existing lots (many of which were created by subdivision later in the 1970s as discussed above) have non-resource residences located on them now, as does the subject parcel in the proposed exception area.

*(B) Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land’s actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.*

**FINDING:** The subject parcel is 40.6 acres, owned by David and Jolene Wilson. David Wilson also owns the land to the south, a 69.3 acre parcel, bisected by the BPA powerline, with one residence and associated accessory buildings. Neither parcel is currently engaged in forestry activities. The parcel to the south is engaged in Farm Use, with a Planning Commission approved agricultural structure and Farm Management Plan. That parcel is not included in this proposal for a rezone, goal exception and comprehensive plan amendment. Contiguous total acreage is 109.48 acres. Per criterion B, both parcels in contiguous ownership shall be considered together in relation to the land’s actual use – in this case the southern parcel is an active farm.

In relation to most forestry operations, a 40.6 acre parcel is a small parcel. According to Criterion B, the nature of its small size is not enough to constitute irrevocable commitment. However, also according to Criterion B, small parcels are more likely to be irrevocably committed if they are developed and clustered around a road designed to serve them. In the case of the subject parcel, there is one large residence in use near the eastern boundary, as well as older structures formerly used as a residence and a barn in the center. Finally Criterion B encourages consideration of whether a property stands alone among larger farm or forest operations, or is buffered from them. For the subject parcel, there is no buffer to the south or southwest as the property to the southwest is in commercial forestry and the one to the south, owned contiguously by the applicant, David Wilson, has farm uses on it. The next parcel south of that is 336 acres used predominantly for grazing. The parcel to the east (southeast adjacent to the subject parcel) is 439 acres of land used for forestry. All nearby lands to the north and west are

residential. The subject parcel does not stand alone amongst larger operations, but nor is it buffered from them.

*(d) Neighborhood and regional characteristics;*

**FINDING:** Based on the descriptions already provided in this submittal, the “neighborhood characteristics” can best be described as commercial timberland to the south, and rural residential development within the area and on every other side. The “regional characteristics” include location, six miles west of The Dalles and 0.2 mile from the closest boundary of the Columbia River Gorge National Scenic Area.

*(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;*

**FINDING:** There are no natural impediments separating the proposed exception area from resource land. There is man-made feature separating the proposed exception area from existing commercial timberlands to the south—the BPA Bonneville-The Dalles power line right-of-way/easement—which forms a 150-foot wide cleared area between the residence on the subject property and commercial forest areas to the south. This power line is located on the adjacent property approximately 1/3 mile south of the subject property’s existing residence (1/5 mile south of the southern property line) and runs slightly northwest to southeast. As described above, the 69 acre parcel owned by the applicant to the immediate south of the subject property has an existing residence (which lies north of and adjacent to the power line) and is in residential use. The power line bisects that property. The 440 acre adjacent property to the southwest of the subject property is owned by Ken Thomas, a private landowner who engages in forestry operations on his extensive Wasco County land holdings. The power line separates the northern 70 acres of that parcel from the southern 370 acres, all of which is in the F-2 (Forest) Zone. This impediment feature is not insurmountable or impassable to forest uses.

*(f) Physical development according to OAR 660-004-0025; OAR 660-004-0025 states the “Exception Requirements for Land Physically Developed to Other Uses” as follows:*

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.*
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.”*

**FINDING:** Part of the justification that the applicant has given for this exception is that a dwelling currently exists on the subject parcel. The exact nature and extent of this house and other structures on the property are identified in Figure 1 above. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is 40.6 acres. If the zone change were to be approved, this land would become F-F (10) and three additional dwellings could be built there.

The current home, abandoned old home, and associated outbuildings are current and former residential uses on this property. Though there is open space on roughly half the eastern portion of the property, it is predominantly oak and open grassland which is not suitable for forestry uses as described and supported in Goal 4. A driveway runs along and near the western property line that connects to another residence on the property to the south of the subject parcel. This development – buildings and residential access ways – qualify as uses not allowed by the applicable goal, Goal 4 in this case.

*(g) Other relevant factors;*

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

- g.** *OAR 660-004-0028(7): The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.*

**FINDING:** The submittal complies with this requirement, and includes various maps of the proposed exception area and adjoining lands submitted with the application as Exhibit 8. Tables, charts, and summaries are also included within the submittal and as exhibits to this narrative, along with maps and other materials.

- h.** *OAR 660-004-0040: Application of Goal 14 Urbanization to Rural Residential Areas, states: The purpose of this rule is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.*

*Subsections -0040(1) through (4) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in OAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in OAR 660-004-0040.*

**FINDING:** OAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning that would be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or

water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

OAR 660-004-0040 (5) and (6):

- (5) *The rural residential areas described in Subsection (2)(f) of this rule are “rural lands”. Division and development of such lands are subject to Goal 14, which prohibits urban use of rural lands.*
- (6)(a) *A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres, except as is required by section(8) of this rule*
- (6)(b) *A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone’s minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.*

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed F-F (10) zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

OAR 660-004-0040 (7) and (8):

- (7) *After October 4, 2000, a local government’s requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division.”*

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

- (8)(a) *The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule.”*

**FINDING:** The proposed F-F (10) zone will prevent the creation of any new lot or parcel in the area smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

- (b) *Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area.*

**FINDING:** The minimum lot size for the area would be ten acres in the F-F (10) zone. For a PUD, a permitted use in the F-F (10) zone and in which dwellings could be clustered away from commercial

forestry uses, the minimum property size is 2.5 acres, and the overall density of the PUD cannot exceed a ratio of one dwelling for every ten acres in the PUD.

- (c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.*

**FINDING:** The minimum lot size of the proposed F-F (10) zone would be ten acres, and that minimum lot size would apply in the proposed exception area.

- (d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.*

**FINDING:** The County's land use regulations do not specify a minimum lot size smaller than two acres for the proposed F-F (10) zone.

- (e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (A) through (H) are met:*

**FINDING:** The F-F (10) code permits planned unit development (PUD). In the event that a zone change to that designation is approved by the County then PUDs may be authorized if (A) through (H) are met.

- (A) The number of new single family dwellings units to be clustered or developed as a PUD does not exceed 10.*

**FINDING:** The proposed F-F (10) zone on the 40.6 acre subject parcel would result in a maximum of three (3) additional dwellings which does not exceed 10.

- (B) The number of new lots or parcels to be created does not exceed 10.*

**FINDING:** The proposed F-F (10) zone on the 40.6 acre subject parcel would result in a maximum of three (3) additional parcels which does not exceed 10.

- (C) None of the new lots or parcels will be smaller than two acres.*

**FINDING:** The proposed F-F (10) zone specifies that no new lots can be smaller than 10 acres.

- (D) The development is not to be served by a new community sewer system.*

**FINDING:** There are no community sewer systems in the area, nor has one been requested. A community sewer system would not be approved for a PUD in this region. Development in this region is served by septic systems, approved by the North Central Public Health District.

- (E) The development is not to be served by any new extension of a sewer system from within an urban growth boundary or from within an unincorporated community.*

**FINDING:** The subject parcel is approximately four miles linearly and 1800' in elevation away from the nearest Urban Growth Boundary for the City of The Dalles. The unincorporated community of Rowena is 2.7 miles away and also much lower in elevation. No new extensions of any sewer systems, existing or future, will be extended to the Seven Mile Hill area.

*(F) The overall density of the development will not exceed one single family dwelling for each unit of acreage specified in the local government's land use regulations on October 4, 2000 as the minimum lot size for the area.*

**FINDING:** The 40.6 acre subject parcel contains one lawful single family dwelling. If the zone were to change to F-F (10), a total of four (4) (for a maximum of three (3) new) single family dwellings could be placed on this land, in accordance with County regulations for minimum parcel size in that zone as it existed on October 4, 2000.

*(G) Any group or cluster of two or more dwelling units will not force a significant change in accepted farm or forest practices on nearby lands devoted to farm or forest use and will not significantly increase the cost of accepted farm or forest practices there; and*

**FINDING:** For purposes of this finding, the area in consideration includes the surrounding rural residential areas to the west, north, and east, the commercial forestlands to the southeast, and the contiguous farmland to the south of the proposed exception area. The farm to the south is owned by the applicant. The forest land to the southeast has three options for access: it touches Osburn Cut-off Road 0.8 mile south of its intersection with State Road, as well as Seven Mile Road 650 feet east of the subject parcel. Additionally, it owns a strip of land immediately adjacent to the subject parcel's dwelling driveway access. Because there are two other locations for access, forestry uses may not need to utilize that driveway associated with the existing residence on the subject parcel to access their lands. In the event of forestry operations on the western boundary line of the forest property however, that access would be the shortest and easiest topographically. The addition of residences needing to use that driveway to access their homes could interfere with forestry use access to their land and increase the cost of hauling logs by forcing the owner to create a longer, steeper road from one of the other two access ways. The existing access serves the home on the subject parcel and another on the farm to the south. In the event of a zone change and additional residences on the subject parcel it is likely that either zero or a maximum of one additional dwelling would be sited using that access way, with the other two potential new dwellings being located at the site of the existing historic farmhouse, or along the eastern property line. Zero or one new residence, where two are served currently, would not significantly increase the overall impact of residences on adjacent farm and forest lands beyond what already exists along that access way.

*(H) For any open space or common area provided as a part of the cluster or planned unit development under this subsection, the owner shall submit proof of nonrevocable deed restrictions recorded in the deed records. The deed restrictions shall preclude all future rights to construct a dwelling on the lot, parcel, or tract designated as open space or common area for as long as the lot, parcel, or tract remains outside an urban growth boundary.*

**FINDING:** The Planned Unit Development section of the Wasco County LUDO requires dedicated open space covering at least 60% of any PUD as well as "Articles of Incorporation of the Homeowners"

Association formed to maintain common open space and other common improvements.” Section 18.100 of the LUDO details Open Space requirements, including requirements to deed restrictions as laid out in Criterion H such that a conservation easement or other deed restriction be established to preclude all future rights to construct a dwelling on the lot, parcel, or tract designated as open space or common area for as long as the lot, parcel, or tract remains outside an urban growth boundary.

- (f) *Except as provided in subsection (e) of this section or section (10) of this rule, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle.*

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed potential residential area, except in the event of temporary use permits.

- (g) *In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(23) and (30) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule’s requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.*

**FINDING:** The County is not proposing a new mobile home park or manufactured dwelling park as part of this proposal, in conformance with this section.

- (h) *A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:*

- (A) *The parcel to be divided has two or more permanent habitable dwellings on it;*
- (B) *The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;*
- (C) *Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;*
- (D) *The partition would not create any vacant parcels on which a new dwelling could be established.*
- (E) *For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).*

**FINDING:** Because the county is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

(i) *For rural residential areas designated after the effective date of this rule, the affected county shall either:*

(A) *Require that any new lot or parcel have an area of at least ten acres, or*

(B) *Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'*"

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one single family dwelling for every ten acres. Clustering of dwellings may occur in the event of a PUD or particular land divisions. The purpose of allowing potential clustering of dwellings in the area is to encourage development of dwellings toward the northern end of the area, near existing roads and development, and away from forest resource lands and wildlife habitat areas to the south. This approach is consistent with OAR 660-004-0118 as discussed below.

*OAR 660-004-0118 Planning and Zoning for Exception Areas*

(2) *For "physically developed" and "irrevocably committed" exceptions to goals, residential plan and zone designations shall authorize a single numeric minimum lot size and all plan and zone designations shall limit uses, density, and public facilities and services to those:*

(a) *That are the same as the existing land uses on the exception site;*

**FINDING:** The proposed zoning is F-F (10) which has a single numeric minimum lot size of ten (10) acres.

(b) *That meet the following requirements:*

(A) *The rural uses, density, and public facilities and services will maintain the land as "Rural Land" as defined by the goals and are consistent with all other applicable Goal requirements; and*

**FINDING:** The proposed zoning is F-F (10) which is a non-resource, Forest-Farm zone. The purpose of this zone is described in Section 3.221 of the Waco County LUDO as: "to permit low-density residential development in suitable locations while reducing potential conflicts with agriculture uses, forestry uses and open space." "Rural Land" is defined by OAR 660-004-0040(2)(f) "lands that are not within an urban growth boundary, that are planned and zoned primarily for residential uses." Land within the F-F (10) zone is consistent with this definition of Rural Land as defined by the goals.

(B) *The rural uses, density, and public facilities and services will not commit adjacent or nearby resource land to nonresource use as defined in OAR 660-004-0028; and*

**FINDING:** OAR 660-004-0028 criteria for the subject parcel are addressed above. The subject parcel lies along Seven Mile Hill Road, which is a significant transportation corridor in the area. Access to adjacent and nearby resource lands does not depend on the subject property. The use of the subject property in

a non-resource capacity will not commit adjacent or nearby resource land to non-resource uses as the potential addition of three dwellings will not impede access or resource use of adjacent or nearby properties.

*(C) The rural uses, density, and public facilities and services are compatible with adjacent or nearby resource uses;*

**FINDING:** The proposed zone for the subject property is Forest-Farm, F-F (10). The purpose of this zone is listed in Section 3.221 of the Wasco County LUDO as “to permit low-density residential development in suitable locations while reducing potential conflicts with agriculture uses, forestry uses and open space.” This zone was designed as a non-resource buffer zone between rural residential zones and resource zones such as Forest or Agriculture zones.

The following information is in regards to immediately adjacent properties:

Direction	Account	Size	Zone	Use
North	1196	0.7	F-F (10)	Vacant
North	1195	7.9	R-R (5)	Residential
North East	1194	6.4	F-F (10)	Residential
East	885	13.2	F-F (10)	Vacant
South East	887	12.9	F-F (10)	Residential
South	13446	69.3	F-2 (80)	Residential/Resource
South West	399	439	F-2 (80)	Resource
West	400	16.3	F-2 (80)	Vacant
North West			F-F (10)	Vacant

The residential use of the subject property is compatible with adjacent uses. In general, lands to the south are F-2, resource lands. Lands to the east and west, immediately south of and adjacent to Seven Mile Hill Road are residential (F-F (10) or R-R (10)). Nearby lands to the north, across Seven Mile Hill Road are almost all either R-R (5) or R-R (10) and in residential use. The subject property is currently being used as both a residence and a small farm. The continued use of this land in a residential fashion would be compatible with nearby residential uses.

The BPA line that runs 1/5 mile south of the subject property is the only public facility nearby. Expanded residential use of the subject property would not affect the use and operation of this transmission line. Public services used by the nearby area include roads, police, fire, electrical, telephone, and solid waste disposal. The potential addition of a maximum of three new single family dwellings along Seven Mile Hill Road would have a negligible effect on roads, police, electrical, telephone or solid waste disposal services. There is a slight increased risk of wildfire with the increase of residential use in this wildland-urban interface area.

Sewer services in rural areas of the County are handled with individual septic systems. Nearby and adjacent residential uses on ten acre parcels of land have not encountered difficulty establishing sufficient septic systems. In a November 7, 2018 email John Zalaznik, Environmental Health Supervisor for the North Central Public Health District, stated (in reference to the subject property):

"I think in general that area could accept on site systems. The area looks like it is mostly treed so in general those sites have deeper soils than those open meadow sites. The soils can change so fast though I would not be certain until site evals are done."

Water services in rural areas of the County are handled with individual private wells. There has been widespread concern in the Seven Mile Hill area about a gradually withdrawing water table requiring deeper wells and occasionally resulting in neighboring wells drying up. The addition of three new private wells could have a slight effect on available water supplies for established residential uses in the area. According to an October 12, 2018 email between staff and Watermaster Robert Wood, "Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average". The Oregon Water Resources Department is "not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn't available within the capacity of the resources." He stated that those uses that are exempt from water rights, such as "single or group domestic use, irrigation of no more than ½ acre lawn/ noncommercial garden, stock use" are still being allowed but that new rules are in place requiring more stringent well construction.

*(c) For which the uses, density, and public facilities and services are consistent with OAR 660-022-0030, "Planning and Zoning of Unincorporated Communities", if applicable, or*

**FINDING:** The proposal occurs in the Seven Mile Hill area of Wasco County. There are no incorporated or unincorporated communities in the area. This criterion is not applicable.

*(d) That are industrial development uses, and accessory uses subordinate to the industrial development, in buildings of any size and type, provided the exception area was planned and zoned for industrial use on January 1, 2004, subject to the territorial limits and other requirements of ORS 197.713 and 197.714*

**FINDING:** The proposed change to Forest-Farm F-F (10) zone does not involve an industrial zone, or a proposal for any industrial development. On January 1, 2004 the zoning of the property was not industrial – it was an F-2 Forest zone. As no industrial use is proposed, nor any accessory uses to industrial development, this criterion does not apply.

## **B. Wasco County Comprehensive Plan**

### *Chapter 11 Revisions Process*

#### *A. Intent and Purpose*

*The Comprehensive Plan for Wasco County including all urbanizable areas is the primary document which guides and controls land use within Wasco County excluding incorporated areas. The plan is intended to reflect the community's current thoughts on land use planning and to be responsive to the needs and desires of citizens. In order to achieve this, the plan must respond to changing community attitudes and needs and to unforeseen circumstances which may affect the use of land in the future. It is, therefore, the intent of this section to permit the amendments of the Comprehensive Plan on a periodic basis and to describe the procedure for the amendment process.*

**FINDING:** Chapter 11 of the Comprehensive Plan describes the revisions process for the plan. The intent and purpose makes it clear that it was intended to be altered periodically as the Community and the County sees fit. This application is consistent with Criterion A.

*B. A Comprehensive Plan Amendment May Take the Following Forms:*

(\*\*\*)

*5. A combination plan change/zone amendment. (Legislative or Quasi-Judicial)*

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan's "Definitions—Existing Land Use Map" identifies the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield." In this section, the Forest-Farm zone purpose is stated as "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge." This application also includes a goal exception to Goal 4 since removing land from the F-2 zone removes land from a designated Resource Zone and places it in a Non-Resource Zone. This application is consistent with Criterion 5.

*C. Who May Apply For a Plan Revision:*

*Comprehensive Plan Revision may be initiated by:*

(\*\*\*)

*3. Property owner or his authorized representative. (Quasi-Judicial)*

**FINDING:** This Quasi-Judicial application was submitted by David Wilson, the property owner of the subject parcel. This application complies with Criterion 3.

(\*\*\*)

*E. Quasi-Judicial Revisions*

*Quasi-Judicial revisions are those which do not have significant effect beyond the immediate area of the change, i.e., narrow in scope and focusing on specific situations. Each plan change or revision will first be heard by the Planning Commission on a first-come, first-serve basis. Such hearing shall be conducted in accordance with the Wasco County Planning Commission "Rules and Regulations".*

**FINDING:** This application is narrow in scope, focusing on one property. It will be heard by the Planning Commission first for a recommendation, then the Board of County Commissioners for a decision, in accordance with the Wasco County Planning Commission "Rules and Regulations". Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615, on February 26, 2019. This application is consistent with Criterion E.

(\*\*\*)

#### *H. General Criteria*

*The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:*

**FINDING:** These are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission and Board of Commissioners need only consider these criteria and determine whether they are generally satisfied.

- 1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.*
- 2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.*

**FINDING:** The following findings demonstrate how compliance is achieved with statewide land use planning goals that may apply to the request, as required to be considered by subsections 1 and 2 of H., the plan amendment General Criteria:

Goal 1 – Citizen Involvement. The purpose of Goal 1 is to ensure the “*opportunity for citizens to be involved in all phases of the planning process.*” Wasco County has included opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures such as public notice and public hearings for the proposed changes. Compliance with Goal 1 is ensured through compliance with the applicable Plan and zoning ordinance procedural provisions. These proceedings are being conducted with notice and hearings as required by law and County ordinance. Public participation will be a feature of Planning Commission and Board of County Commissioner meetings, which – by the time of this hearing - will have been sufficiently noticed to the public according to state law. Given this information, the proposal complies with Goal 1.

Goal 2 – Land Use Planning. The purpose of Goal 2 is “*to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.*” The County’s planning process has been acknowledged by the State as being in compliance with the Statewide Planning Goals, and was followed in consideration of the proposal. The “adequate factual base” is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal complies with Goal 2, requirements for the adoption of exceptions to a statewide goal.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal. Small-scale farming activities may be possible in the area, but are not likely to be affected by the allowance of three new rural residences.

Goal 4 – Forest Lands. Goal 4 provides for the preservation of Forest Lands for forest use. The property included in the proposed exception area is currently designated Forest Land but is not in forest use, nor is it in a forest assessor class (its assessor class is 401 for residential improved tract). As indicated by the applicant’s materials, the intention of this proposal is to preserve small-scale forest and farm uses, while allowing establishment of rural residences, through a conditional use process, under the County’s F-F(10) zoning. Because the requested plan and zone designations would allow development of non-

forest uses, an “exception” must be taken to Goal 4. The exception is justified in part 2, addressing LCDC’s administrative rule requirements for “built” and “committed” exceptions. The proposal complies with Goal 4.

Goal 5 – Open Spaces, Scenic and Historic Areas, and Natural Resources. The subject parcel is located within the Low Elevation Winter Range of the Big Game Wildlife Overlay. Wasco County recognizes in its Comprehensive Plan that big game herds are a valuable natural resource. The County Zoning Ordinance contains siting and development criteria, found in Zoning Ordinance Section 3.920, for lands within designated areas in the County. Goal 5 is met by the application of these standards to any development within the designated Big Game Winter Range. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 – Air, Water, and Land Resources Quality. Goal 6 is *“To maintain and improve the quality of the air, water and land resources of the state.”* The proposed exception area is not located in a federal air quality attainment area, and three new single family dwellings will not generate significant additional air pollution. Sewage disposal needs of all new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is *“To protect people and property from natural hazards.”* Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The only natural hazard listed in the rule relevant to the request is “wildfires.” Chapter 10 of the Wasco County LUDO, created in 2007, establishes standards and requirements that ensure fire safe development throughout the County, and would apply to any additional residences or land uses in this area. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is *“To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.”* Under the current zoning, hunting and fishing operations are allowed outright without lodging, and parks and campgrounds are allowed as conditional uses. If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. Recreational needs can be achieved under both zoning designations. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is *“To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon’s citizens.”* The subject property is currently being used for one single family dwelling. A zone change to F-F (10) would potentially increase that to a maximum of four single family dwellings, an increase in economic development. It is not currently being used for forest uses, nor is it being assessed for forest tax deferral status. Previous analysis above in OAR 660 Division 4 Section 25 of soil types, as well as the current use of the neighboring approximately 1,100 acre tract for forestry to the south show that this parcel is in an area that does have potential to be used as part of a commercial forestry operation. The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with Goal 9.

Goal 10 – Housing. Goal 10 is *“To provide for the housing needs of citizens of the state.”* The rule is directed to lands in urban and urbanizable areas, and encourages residential development to occur in

existing urban areas. However, the proposal will allow development of additional rural residences in an area that is largely committed to existing rural residential uses. Guideline A(4) of Goal 10 states: *“Plans providing for housing needs should consider as a major determinant the carrying capacity of the air, land and water resources of the planning area. The land conservation and development actions provided for by such plans should not exceed the carrying capacity of such resources.”* As noted in several locations of this report, impacts of the proposed exception area have been evaluated by this report for impacts to the air, land and water resources of the planning area. Consistent with Goal 10, the proposal will increase housing opportunities in an area where such uses may be appropriate.

Goal 11 – Public Facilities and Services. Goal 11 is *“To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.”* In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as community scale water and sewer services are not considered necessary or appropriate. The subject location is serviced by public roads that are regularly maintained and adequate to serve the exception area. Local fire and police services are provided by Mid-Columbia Fire and Rescue Department, the Oregon Department of Forestry, and the Wasco County Sheriff’s Office. Neither water nor sewer services are provided to the area, but both are available on the subject properties through individual wells and septic tank systems. Electric (Wasco Electric Co-op) and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres for a maximum potential of three additional residences) would be comparable to other nearby development. The proposal complies with Goal 11.

Goal 12 – Transportation. Goal 12 is *“To provide and encourage a safe, convenient and economic transportation system.”* Recent estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.07 at Seven Mile Hill Road and Chenoweth Creek Road according to the 2009 TSP. 2030 projections place V/C ratios at 0.21. Under the proposed exception area standards, it is estimated that a maximum of three new residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which would not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. Given this information, the proposal will have little impact on the transportation system serving the exception area because there will be a tiny increase in traffic generated by development that might occur as a result of the plan amendment and zone change.

In connection with Goal 12, the county is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is therefore in conformance with Goal 12 and the Goal 12 rule.

Goal 13 – Energy Conservation. Goal 13 is *“To conserve energy.”* In this case, Goal 13 is promoted through standards that require clustering of dwellings toward established roads. The potential for three additional dwellings in this area would result in an increase in energy use, but this goal is for conservation of energy, not elimination of its use. Use of the property for forestry purposes would also result in the expenditure of energy in growing, harvesting, and transporting the product. In neither case would the energy expenditure be significantly greater than uses allowed under current zoning. The proposal conforms with Goal 13.

Goal 14 – Urbanization. Goal 14 is “To provide for an orderly and efficient transition from rural to urban land use...” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No “urban” services will be required to allow the maximum amount of development contemplated by this proposal. In the TLSA Study, well water was noted as being available in the area in sufficient quantities to serve the proposed housing density that would result from a zone change to F-F (10) (see Exhibit 4, TLSA Groundwater Study). However, as discussed above in Background information, the Wasco County Watermaster, Robert Wood, and the OWRD have identified the Seven Mile Hill area as having decreasing water supplies since then. Any future application for property division or development will need to comply with their requirements regarding residential well water usage. The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 are coastal specific goals and do not apply in Wasco County.

3. *A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.*

**FINDING:** Webster’s least recriminatory definition of “mistake,” most appropriate here, is “a misunderstanding of the meaning or implication of something.” (Unabridged Ed., 1993). This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the area are more appropriate than the original designations. As noted previously, this area was evaluated as part of the TLSA – which posed a very similar question. The application materials assert that the County was incorrect in its characterization of the area as most appropriate for commercial forest uses. The materials attribute this to the fact that numerous residential lots were platted south of Sevenmile and Dry Creek roads before the designation of F-2 was made. Additionally, subsequent County land use decisions have allowed rural residential uses on both sides of Sevenmile Hill and Dry Creek roads. The applicant claims that the area now appears to be committed to residential uses, and no longer suitable for forestry uses. They argue that a change in the character of the neighborhood is evident, and justification for a Zone Change.

The TLSA study could be interpreted to support a conclusion that lands in this area are appropriate for rural residential uses. The TLSA evaluated lands in this area and recommended changes to some properties and not others. This property was evaluated but not rezoned. However, that was 20 years ago, and conditions continue to change. The County’s rezoning of several parcels south of Sevenmile Hill Road from F-F (10) to R-R (10) after completion of the TLSA Study, allowing development of nonfarm or forest dwellings as permitted uses supports this conclusion. The approval of dwellings in and immediately adjacent to the subject property also could support a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

To the extent the existing designation is a mistake, the proposal will effectively correct that mistake on the subject property by allowing development of residences in an area physically separated from actively managed commercial forest lands by a power line right-of-way/easement. The proposal also

recognizes that the character of the neighborhood south of Sevenmile Hill Road has changed from undeveloped forest and woodlot, to rural residential uses, and seeks to resolve existing conflicts between forest and residential uses.

*4. Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.*

This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses. Low intensity residential development would match the aesthetic surroundings of single family dwellings along both sides of Seven Mile Hill. Any risk of additional fire exposure is mitigated by County Fire Safety Standards that have been in place since 2007 and can be found in Chapter 10 of the WC LUDO.

*5. Proof of change in the inventories originally developed.*

The proof required by this section is provided by these findings and the attached exhibits. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed within, and in close proximity to the resource area, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed—demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small-scale farm and forest uses with limited density housing in a manner that promotes and improves protection of nearby forest resource lands south of the BPA easement.

*6. Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.*

**FINDING:** As described throughout these findings, the proposed revisions are based on the TLSA study, County land use decisions in the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits.

As evidenced by the discussion in this staff report, and the further supported by the Wasco County Comprehensive Plan, there is a public need for low-density rural residential uses, and for small scale farm and forest uses in the County generally as well as in the Sevenmile Hill area specifically. The justification for the particular change, addressed throughout these findings, is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. It is feasible to mitigate the potential impacts of fire in the area, by utilizing existing firebreaks, and imposing requirements for clustering dwellings; maintenance of fire breaks around dwellings; maintenance of adequate fire suppression water supplies, and similar practices in accordance with Chapter 10 Fire Safety Standards, of the LUDO. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

**I. Transportation Planning Rule Compliance**

*1. Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed*

*to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). ‘Significant’ means the proposal would: (exclusive of correction of map errors in an adopted plan);*

- a. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
  - b. Change standards implementing a functional classification system; or*
  - c. As measured at the end of the planning period identified in the adopted transportation system plan:*
    - (1) Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
    - (2) Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
    - (3) Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*
- 2. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:*
- a. Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.*
  - b. Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.*
  - c. Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.*
  - d. Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.*
- 3. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance.”*

**FINDING:** The proposal is to change the zoning for one 40.6 acre parcel from F-2 (80) to F-F (10), potentially resulting in a maximum of three new dwellings. At an average of 9.57 Average Daily Trips

(ADT) per dwelling for a potential total of 29 new ADT, the impact from this proposal would not result in any change of functional class or allow land uses inconsistent with the current functional class of Seven Mile Hill/State Road. Staff finds that a separate Traffic Impact Analysis is not required because there would not be a “significant impact” under OAR 660-12-0060, the Transportation Planning Rule (TPR).

**J. Procedures for the Amendment Process.**

1. *A petition must be filed with the Planning Offices on forms prescribed by the Commission.*

*(\*\*\*)*

3. *Notification of Hearing:*

- (1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.*
- (2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.*
- (3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.*
- (4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.*
- (5) Upon receiving the Planning Commission’s recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties.”*

**FINDING:** Notice of the Planning Commission Hearing on April 2, 2019 complied with the requirements in (1). This was submitted to The Dalles Chronicle for publication on March 13, 2019, which was between 20 and 40 days prior to the hearing, meeting the requirements of (2). At that hearing, five Planning Commissioners were present for the vote, greater than the four needed to form a quorum, which meets the requirements of (3). They voted 4-1 to recommend approval of the proposal, meeting the requirements of (4). Notice of this recommendation was mailed out on May 9, and scheduled to be posted in The Dalles Chronicle on May 15. The Board of Commissioners hearing is scheduled for June 5, which is 21 days after May 15, within the 20-40 day requirement of newspaper notification noted in (2). It is also at least twenty (20) days after notice was mailed, as required in (5). Staff finds that Criteria (1)-

(5) were met and are being met for both the Planning Commission hearing and the Board of Commissioners hearing.

**C. Wasco County Land Use and Development Ordinance (LUDO)**

**Chapter 9 – Zone Change and Ordinance Amendment Zoning Ordinance - Chapter 9:**

***Section 9.010 – Application for Zone Change***

*Application for a zone change may be initiated as follows:*

*(\*\*\*)*

- C. *By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the to establish the criteria for the change (quasi-judicial only);*

**FINDING:** This zone change proposal from Forest, F-2 (80), to Forest-Farm, F-F (10), was initiated by the owner of the subject property, David Wilson, on forms provided to him by the planning department, which he signed. All required information was included to address criteria. This is a quasi-judicial action.

***Section 9.020 – Criteria for Decision***

*The Approving Authority may grant a zone change only if the following circumstances are found to exist:*

- A. *The original zoning was the product of a mistake; or*

**FINDING:** As discussed above in the Comprehensive Plan Chapter 11 Section H.3., the application materials assert that it was a mistake, stating that the County was incorrect in its characterization of the area as most appropriate for commercial forest uses. The materials attribute this to the fact that numerous residential lots were platted south of Sevenmile and Dry Creek roads before the designation of F-2 was made. Additionally, subsequent County land use decisions have allowed rural residential uses on both sides of Sevenmile Hill and Dry Creek roads, leaving the subject property as the sole F-2 zoned property along the length of Seven Mile Hill Road, with the rest being Forest-Farm or Rural-Residential. The applicant claims that the area now appears to be committed to residential uses, and no longer suitable for forestry uses. They argue that a change in the character of the neighborhood is evident, and justification for a Zone Change. This land was zoned for Forestry initially, but has not been used for that purpose. Staff finds that the subject parcel is physically developed with residential uses, and irrevocably committed to that use, indicating that the zoning of this land to be used for Forestry, as determined by the Comprehensive Plan, was a mistake.

- B. *It is established that*

1. *The rezoning will conform with the Comprehensive Plan; and,*

**FINDING:** This zone change request includes a request for a plan amendment and an exception to Goal 4. The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards

that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by this criterion. These goals are discussed above in III.A. Wasco County Comprehensive Plan where the request was found to be in conformance. This criterion would be met because the Comprehensive Plan would be amended specifically to support the proposed zoning designation. Following amendment of the Comprehensive Plan Map, the plan designation for the subject property would be “Forest-Farm.” The zone designation, “Forest-Farm,” with a minimum lot size of ten acres, (F-F (10)) is a zone that conforms with the proposed plan designation.

*2. The site is suitable to the proposed zone;*

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan’s “Definitions—Existing Land Use Map” identifies the subject property as: “Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year.” Page 232 of the plan lists “Purpose Definitions of Map Classifications on the Comprehensive Plan Map.” The existing plan classification, “Forest,” states: “Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield.” In this section, the Forest-Farm zone purpose is stated as “To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge.”

The proposed zone would allow farm and forest uses (permitted outright) and dwellings (conditional use permit) and land divisions down to ten acres. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

*“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”*

The Forest-Farm zone is not a resource zone. In this case, it is the most suitable designation for the subject property, which has been partially built and entirely committed to non-resource use due to its location in close proximity to a major county rural residential area, and on site existing residential uses including a single family dwelling, an unused historic dwelling, and associated outbuildings. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

The history of the area is also relevant to addressing this standard. The extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of those surrounding areas to non-resource, rural residential uses. On-going development of residences south of Sevenmile Hill and Dry Creek Road has diminished the value of those roads as a firebreak for commercial timberlands to the south. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable. The subject property is less suitable for commercial forestry than the forestland south of the subject property. The subject property is better used as a buffer between low-density rural residential uses to the north, and commercial forestry uses to the south. The most appropriate design for that buffer is: 1) allow limited housing opportunities in relatively close proximity to existing roads and development and 2) promote

clustering of housing generally away from commercial forest areas allowing remaining open areas to be used for small or large scale commercial forest activities, wildlife habitat and as a buffer for those activities. The subject parcel is suitable to the proposed zone as required by Criterion.B.2.

3. *There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations."*

**FINDING:** This application is for a goal exception and zone change from F-2 to F-F. The effective result of an approval would be a maximum of three additional single family dwellings, if this land was divided and developed. The TLSA study investigated the suitability of the area for residential needs, including "the availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area," all important factors to consider in this area when it comes to public welfare. The proposal is designed to provide an appropriate buffer between low-density rural residential, forest and farm uses on the one hand (to the north, east and west), and commercial forestry uses on the other (to the south). The "specific zoning" includes the Forest-Farm zone with a ten acre minimum lot size, clustering to a density not to exceed one dwelling for every ten acres. The potential three new dwellings would be required to comply with the fire safety standards for development set out in Chapter 10 of the Wasco County LUDO, as well as any other applicable requirements of law pertaining to health, safety, and welfare, such as building codes or public health requirements. The exhibits and record of this proceeding support a finding of compliance with this requirement.

#### *Section 9.030 - Transportation Planning Rule Compliance*

*A. Review of Applications for Effect on Transportation Facilities - A proposed zone change or land use regulation change, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – "TPR").  
"Significant" means the proposal would:*

- 1. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
- 2. Change standards implementing a functional classification system; or*
- 3. As measured at the end of the planning period identified in the adopted transportation system plan:*
  - a. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
  - b. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
  - c. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new single family dwellings. As discussed above in the Background section, the Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7)):

Capacity for State Rd/7-Mile Hill Rd      1,500/day

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use Code 210). The zone change could potentially add three dwellings to the area's traffic load, producing about 29 new ADT at maximum build-out. The 2009 TSP predicted an ADT of 600 by 2030 with a Volume/Capacity (V/C) ratio of 0.03 for State Road (at Sevenmile Hill Road). Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the County used the OHP mobility standard of 0.70 as a comparison figure. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of three dwellings would not cause the V/C ratio to rise above 0.70. The TSP predicted that it would only hit 0.03 by 203 at 600 ADT, so even if it was 629 ADT at that time, that would not approach 0.70. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

*B. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new dwellings. The expected maximum increase in impact on the adjacent road, Seven Mile hill, would not meet the requirements stated in Criterion A. to qualify as "Significantly affecting" that transportation facility. Staff finds that Criterion B. is not applicable.

*C. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a zone change application pursuant to Section 4.140 Traffic Impact Analysis (TIA))*

**FINDING:** The proposal is to change the zoning for one 40.6 acre parcel from F-2 (80) to F-F (10), potentially resulting in a maximum of three new dwellings. At an average of 9.57 Average Daily Trips (ADT) per dwelling for a potential total of 29 new ADT, the impact from this proposal would not result in any change of functional class or allow land uses inconsistent with the current functional class of Seven Mile Hill/State Road. Staff finds that a separate Traffic Impact Analysis is not required because there would not be a "significant impact" under OAR 660-12-0060, the Transportation Planning Rule (TPR).

*Section 9.040 - Conditions Relative to the Approval of a Zone Change Reasonable conditions may be imposed, pursuant to Section 2.110(D) as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance. Such conditions may include, but are not limited to, the following:*

*A. Special yards and spaces;*

*B. Fences and walls;*

*C. Special parking and/or loading provisions;*

*D. Street dedication and improvements or bonds in lieu of improvements;*

*E. Control of points of vehicular ingress and egress;*

*F. Special provisions for signs;*

*G. Lighting, landscaping and maintenance of grounds;*

*H. Control of noise, vibration, odors, or other similar nuisances.*

**FINDING:** The application is for a Comprehensive Plan Amendment, Goal Exception and Zone Change for one 40.6 acre parcel from F-2 to F-F (10) zoning. The result of an approval would be a property that could be divided into four ten acre parcels, and the possible addition of a maximum of three additional dwellings. No structures are associated with this request. Since dwellings in the F-F (10) zone are Conditional Use Permits, any future requests involving a partition and additional structures will be examined to ensure these conditions are met. For the current application staff finds that no additional conditions are required to ensure compatibility with surrounding uses.

*Section 9.050 - Amendments to the Zoning Ordinance*

*Amendments to this Ordinance may be initiated as follows:*

*A. By resolution of the County Governing Body referring a proposed amendment to the Planning Commission for its consideration, report and recommendations;*

*B. By a majority vote of the Planning Commission confirmed by the Wasco County Governing Body;*

*C. By request of the Director of Planning or the District Attorney to conform the Ordinance to changes in the State Law;*

**FINDING:** The application is for a Comprehensive Plan Amendment, Goal Exception and Zone Change. It is not an application for an amendment to the Zoning Ordinance. Staff finds that Section 9.050 is not applicable.

*Section 9.060 - Recommendation on Zone Change or Amendment to the Land Use and Development Ordinance*

*After hearing, the Approving Authority shall recommend that the proposed zone change or amendment to the Zoning Ordinance be granted or denied. The Director of Planning or his assistants shall reduce to writing the Commission's recommendations together with a brief statement of the facts and reasons upon which such recommendation is based.*

*Section 9.070 - Notice of Planning Commission Recommendation*

*Within ten (10) days of the final Planning Commission hearing, the Director of Planning or his assistants shall give notice thereof to any persons who signed in and testified at the hearing and to such other persons as may have requested the same in writing.*

**Section 9.080 - Action by County Governing Body**

*Upon receipt of the Commission report, the County Governing Body shall take such action as may appear appropriate to that body, or as it feels the public interest requires, provided that in no event shall the County Governing Body act until at least twenty (20) days after the Notice of Planning Commission Recommendation has been mailed.*

**FINDING:** The Planning Commission met on April 2, 2019 and recommended Approval. Due to a procedural oversight by staff, notification was not distributed to interested parties within ten (10) days of the hearing. However, this notification (which included a statement of the facts and reasons upon which it was based) was distributed to all interested parties, agencies, and those that signed in and spoke at the Planning Commission Hearing as required by mailing and/or email on May 9, 2019. A hearing that had been scheduled for May 15 was postponed to June 5 to meet the requirements of Section 9.080 to ensure the County Governing Body would not act for at least twenty (20) days from the date the Notice of Planning Commission Recommendation was mailed. The County Governing Body is the Board of Commissioners, who will meet to take action that they deem appropriate on this request on June 5, 2019, more than twenty (20) days after the Planning Commission Recommendation was mailed. Despite missing the ten day window, all individuals and agencies that needed to be notified were, and action was not taken by the Governing Body until sufficient time had passed. Staff finds that Sections 9.060, 9.070, and 9.080 were met.

rec. 4/2/19  
JS

The predominant source of water in this area is from wells. There are two wells on the subject property (see Well Reports WASC 003131, WASC 003111, & WASC 003105). Yields are 50 & 60 GPM. There is also a well located on applicant's property to the south of the subject property yielding 35 GPM (see Well Report WASC 1609). The wells on the subject property have the capacity to support additional residential development, and the yields of all wells indicate adequate groundwater supply in the area. See additional findings below regarding the TLISA study.

**SUMMARY OF INFORMATION**  
**Prepared for Planning Commission Hearing**

FILE # 921-18-000086-PLNG

**HEARING DATE:** April 2, 2019

**NEWSPAPER PUBLISH DATE:** March 13, 2019

**REQUESTS:**

1. Comprehensive Plan Map Amendment: Change a legal parcel designated "Forest" to "Forest Farm;
2. Exception to Statewide Planning Goal 4 – Forest Lands; and
3. Zone Change: Change a legal parcel tax lots zoned F-2 (80), Forest, to F-F (10), Forest-Farm

**STAFF RECOMMENDATION:**

1. The Planning Commission should accept and weigh public testimony;
2. The Planning Commission should use their judgment to make an objective recommendation for continuance, approval, or denial.

**APPLICANT/OWNER:** David Wilson, 7100 Seven Mile Hill Road, The Dalles, OR 97058

**PROPERTY LOCATION:** The subject property is located along and south of Sevenmile Hill Road, southeast of it's intersection with Richard Road, approximately 4.3 miles northwest of The Dalles, Oregon; more specifically described as:

<u>Map/Tax Lot</u>	<u>Acct#</u>	<u>Acres</u>
2N 12E 22 4400	884	40.16

**ZONING:** F-2(80), Forest Zone

**PROTECTION DISTRICT:** EPD-8, Sensitive Wildlife Habitat Overlay Zone (Low Elevation Winter Range)

**ATTACHMENTS:**

- A. Staff Recommendation and Planning Commission Options
- B. Maps
- C. Staff Report
- D. Exhibits

## ATTACHMENT A

### STAFF RECOMMENDATION AND PLANNING COMMISSION OPTIONS

The full staff report with all proposed findings of fact and conclusions of law is enclosed as **Attachment C** and was available for public review at the Wasco County Planning Department for review one week prior to the April 2, 2019, hearing. The full staff report is made a part of the record. This summary does not supersede or alter any of the findings or conclusions in the staff report, but summarizes the results of Staff's review and recommendation.

#### **STAFF RECOMMENDATION**

As noted on the cover page of this document, Staff's recommendation is for the Planning Commission to accept and weigh public testimony, and that the Planning Commission should use their judgment to make an objective recommendation for continuance, approval, or denial. The reasoning for this broad recommendation is that this is a complex proposal that could have both positive and negative impacts on the land base of Wasco County. In some cases the proposal potentially advances statewide planning goals and policies, and in others it may detract from them. The Planning Commission has a more broad level of discretionary authority to hear the proposal and weigh the positive and negative impacts for a final recommendation to the Board of County Commissioners. The following list briefly outlines staff's apprehensions, and areas of support.

Overall, staff has the following apprehensions regarding the proposal:

- Conducting forestry operations are not currently impracticable (Goal 4).
- More residences would result in the loss of more wildlife habitat (Goal 5).
- The proposal would create more residences, which would increase wildland-urban interface fire risk and potential impacts (Goal 7).
- The impact of potentially three new single family dwellings on available water supplies in an area with existing concerns (Goal 5, 6, 11).

Additionally staff sees the following advantages:

- Three new dwellings will increase rural residential housing supply (Goal 10).
- On land not currently (or in recent history) being used to harvest forest products, the transition from unused potential resource lands to probable useful residential land could result in a net positive impact economically (Goal 9).

Staff's approach is to remain neutral and objective throughout the process and garner as much input as possible. Staff will support the recommendation that the Planning Commission feels is appropriate to forward to the Wasco County Board of Commissioners.

#### **FORMAT**

This summary and staff report feature several locations where items are highlighted in **GREEN** or **YELLOW**. The green options represent potential Approval Findings, and the yellow options represent potential Denial Findings. The Planning Commission must select one or the other in each instance, or rewrite them to their preference. **It only takes one Criterion not being met to recommend denial of the request.** With the exception of the Comprehensive Plan, Section H. Findings which are factors for consideration, and not criteria which must be met, if the PC upholds the interpretation of ANY yellow Denial finding over a green Approval finding, the recommendation to the Board of Commissioners will be for denial.

## ATTACHMENT A

### STAFF RECOMMENDATION AND PLANNING COMMISSION OPTIONS

#### PLANNING COMMISSION OPTIONS

- A. Continuation: Based on testimony and evidence presented at the hearing, continue the hearing for more time to deliberate and/or consider the information provided. Additional testimony may provide specific reasons to support a recommendation of approval or denial.
- B. Continuation: Based on testimony and evidence presented at the hearing, request additional information of staff or the applicant, and keep the record open for additional information to be provided until the next hearing at a date and time certain.
- C. Recommend Approval: Based upon all of the findings of fact and conclusions of law set forth above, the Planning Commission can recommend approval of the exception and zone change with Approval Findings as laid out in the Staff Report with “Approval Finding” language, and recommend that the proposed exception area be rezoned to F-F(10) and that the corresponding plan, map and ordinance changes be made.
- D. Recommend Approval With Modification(s): Approve the request with amended findings of fact and/or new conclusions of law.
- E. Close the Public Hearing, and Continue Deliberation to Work Session: Acknowledge that all required evidence has been presented and heard. Continue deliberations with a scheduled work session to review and edit individual findings before making a final decision.
- F. Recommend Denial: Based upon all of the findings of fact and conclusions of law set forth above, the Planning Commission can recommend denial of the exception and zone change with Denial Findings as laid out in the Staff Report with “Denial Finding” language, and recommend that the Commission deny the request for a Zone Change, Goal Exception, and Comprehensive Plan Amendment.
- G. Recommend Denial With Modification(s): Deny the request with amended findings of fact and/or new conclusions of law.

Section 9.080 - Action by County Governing Body

## **II. BACKGROUND INFORMATION**

**A. Legal Parcel:** The subject parcel was legally created by Partition PLAPAR-17-05-0002 recorded with the Wasco County Clerk on September 8, 2017. The subject parcel is considered to be legal because it meets the LUDO Section 1.090 definition of a (Legal) Parcel as it is a parcel in an existing, duly recorded partition.

### **B. Public Facilities and Services**

1. Transportation: The subject property lies south of Sevenmile Hill Road southeast of its intersection with Richard Road, approximately ½ mile east of the intersection of Sevenmile

Hill/State/Dry Creek Road. Roads. Access to the subject property is from Sevenmile Hill Road.

The 2009 Wasco County Transportation System Plan (TSP) provides the following information for Average Daily Trips (ADT) and Volume/Capacity (V/C):

	Functional Class	ADT 2009	V/C ratio from TSP
State Rd	RC Rural Major Collector	480	0.01
Dry Creek	RK Rural Minor Collector	78	n/a
Osburn Cut-off	RL Rural Local	51	n/a

The Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7):

*Capacity for State Rd/7-Mile Hill Rd      1,500/day*

According to the latest version of the Institute of Transportation Engineers (ITE) Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use Code 210). The zone change could potentially add three dwellings to the area's traffic load, producing approximately 29 new ADT at maximum build-out. The 2009 TSP predicted an ADT of 600 by 2030 with a Volume/Capacity (V/C) ratio of 0.03 for State Road (at Sevenmile Hill Road). Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the County used the Oregon highway Plan (OHP) mobility standard of 0.70 as a comparison figure. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of three dwellings would not cause the V/C ratio to rise above 0.70. The TSP predicted that it would only hit 0.03 by 2030 at 600 ADT, so even if it was 629 ADT at that time, that would not approach 0.70. Using that mobility standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

2. Water and Sewer: There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A Geologic Survey was published in 1996 as part of the TLSA study (see below under Land Use History) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities at the time. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Exhibit 4, the TLSA Study Area Ground Water Evaluation – Wasco County, Oregon, Jervey Geological Consulting ("Groundwater Study") at pages 12-13.) The predominant source of water in this area is from wells. The general conclusion of the 1996 groundwater study was that this area had capacity to support additional residential development. The study also recommended that groundwater levels be periodically monitored to assess the impact of ongoing rural development.

Water resources for residential use in this area do exist, but they are being closely monitored by the Oregon Water Resources Department, as recommended by the TLSA

study. According to an October 12, 2018 email between staff and Watermaster Robert Wood, “Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average”. The Oregon Water Resources Department is “not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn’t available within the capacity of the resources.” He stated that those uses that are exempt from water rights, such as “single or group domestic use, irrigation of no more than ½ acre lawn/ noncommercial garden, stock use” are still being allowed but that new rules are in place requiring more stringent well construction.

There are no public sewer facilities available in the area. Each of the three potential single family dwellings would be required to handle its own sewage as required by law. At the development stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

3. Electricity: Wasco Electric Co-op power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence already located on the subject property.
4. Fire Protection and Prevention: The subject property is within the Mid-Columbia Fire and Rescue District boundaries. The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies. Any future development proposals will be required to comply with Wasco County LUDO Chapter 10 Fire Safety Standards.

### C. Land Use History:

#### *Transitional Lands Study Area (TLSA) Project*

In 1993, Wasco County began work on the Transition Lands Study Area Project (“TLSA”) in response to concerns about development in northern Wasco County, and particularly in the area surrounding the parcels in this current proposal, known as the Sevenmile Hill area. The concerns included “availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area.”

The first phase of the TLSA was a groundwater study. The initial study was published in December 1996 as the “TLSA Ground Water Evaluation, Wasco County, Oregon” by Jervey Geological Consulting (The Groundwater Study”). On September 12, 1997, the final report for the TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the properties in this current proposal were rated “L/H,” meaning that they scored low for Resource Values and high for Development Values (with the exception of the northern part of parcel 2900, which was rated H/H, or having high scores for both Development Values and Resource Values).

The final Recommendation of the TLSA for the Sevenmile Hill area included the following:

- *Retain the existing R-R (5) and A-1 (80) EFU zoning.*
- *Retain the existing F-F (10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).*
- *Rezone the remainder of the F-F (10) lands to R-R (10). F-F (10) areas would be able to transfer development rights to the area identified as the test area.*

No mention is made in this report of how F-2 land should be addressed. After the TLSA study, eight parcels of F-F (10) land in the Sevenmile Hill area north of the subject property were converted to R-R (10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). The County has approved single family dwellings that have subsequently been built on many properties along Seven Mile Hill Road near the proposed exception area.

### *Betzing Appeal*

The County's approval of dwellings south of Sevenmile Hill Road in recent years and the rezoning of portions of the Sevenmile Hill area (in the proximity of the Wilson property) were contentious in the late 1990s. Several appeals were filed by a Mr. Kenneth Thomas, one of which was for a property owned by Mr. Joseph Betzing. Mr. Thomas is a member of the Society of American Foresters, and owns and manages approximately 1100 acre tract of timberland south of the proposed exception area. The appeals were heard by the Oregon Land Use Board of Appeals (LUBA).

One of Mr. Thomas' central concerns was that rural residential development is generally incompatible with commercial forestry—that the approval of additional dwellings south of Sevenmile Hill Road would increase the fire risk for his commercial forest lands to the south and increase the chance that a forest fire in the commercial forest lands would spread to abutting residences and pose a risk to the community.

The LUBA record of hearing (1997-98), and findings leading to the eventual approval of a dwelling on a 5.1 acre parcel south of Sevenmile Hill Road and abutting the subject property (applicant Joseph Betzing), indicated that the area in which the subject property is located is subject to high wind gusts as well as stable high wind patterns. The area is characteristically dry and subject to drought, which leads to high mortality in forest stands. That record also indicated that the Oregon Department of Forestry (ODF) has identified the area as one of particularly high fire risk during the fire season, and has repeatedly identified residential and associated buildings as significant fire hazards. ODF also testified that "dwellings increase the risk of fire, restrict control tactics, complicate the protection priorities and require additional coordination that result in increased cost." (Betzing Record, page 230.)

### *Settlement Agreement and 2013 ZNC/CPA/EXC decision*

To try and address multiple LUBA cases and find solutions, a Settlement Agreement was entered into on January 5, 2000, between the County Planning Director, the appellant Kenneth Thomas, and applicant Joseph Betzing. The settlement was based on a mutual understanding that the area south of Sevenmile Hill Road included land that was already built (with existing residences), and committed (through existing plan and zone designations and development approvals) to

low-density rural residential uses. The logical boundary, separating commercial forestry uses from built and committed residential areas, was identified as the Bonneville Power Administration Transmission Line Easement also known as “Bonneville - The Dalles Line.” The BPA easement area is maintained clear of trees, and acts, because of its width and scarification, as a significant physical break between rural residential uses in the Sevenmile Hill Road area and commercial forestry uses to the south. It was thought that the powerline right-of-way/easement area would separate and therefore mitigate the potential fire impacts associated with low-density residential uses in the Sevenmile Hill area.

Relevant terms of the Settlement Agreement state:

*“The County Department Staff, acting in good faith shall use best efforts in supporting a legislative zone change and comprehensive plan change to modify the zoning and comprehensive plan designation of the property marked in Exhibit A, from F-2 to FF-10.” Exhibit 5, p. 1.*

*To institute these recommended changes, the county’s comprehensive plan should be amended, to take an exception to Goal 4 and to recognize that the area has changed enough to require a new plan designation. The new designation should permit not just small-scale forest-farm uses, but also low-density rural residential use. In this circumstance, the proposed zoning designation is Forest-Farm, with a ten-acre minimum lot size. Residential use of the area in conjunction with forest or farm uses is allowed outright on parcels meeting the minimum lot size, and otherwise, only subject to a conditional use permit. To further promote the goal of protecting commercial forestry in the area, a Limited Use, Forest Protection Overlay Zone, will require clustering of any proposed dwellings toward the northern portion of the area adjacent to existing residential lots and close to existing road access, and establish additional fire prevention standards and conditions. These measures will improve the utility of the subject property to serve as a buffer between rural residential uses in the area and commercial forestry uses to the south.”*

To implement this change, and by resolution of the County Court, staff proposed a Comprehensive Plan Amendment, Goal Exception, Zone Change, and LUDO Amendment proposal in 2013 sought to apply F-F(10) zoning to all or a portion of eight parcels (totaling approximately 287 acres), including the subject parcel of this application, all of which were (and still are) zoned F-2. This action would have allowed potential development of a maximum of 22 rural residences in an area south of Sevenmile Hill Road (County Road 507) and Dry Creek Road (County Road 405), and north of the southern boundary of Bonneville Power Administration’s (BPA) Bonneville - The Dalles Line right-of-way/easement. That right-of-way/easement would have functioned as a physical divider between existing rural residential development and suggested new F-F (10) lands on the one hand, and the commercial forestry lands south of the easement on the other.

After a 4-3 Planning Commission vote to recommend approval to the Board of County Commissioners, the Board voted 2-0 to deny the proposal (PLALEG-13-08-0002). A review of the application materials, comments, reports, and the minutes of that meeting indicates that the major concerns were fire safety, and water supply.

### III. FINDINGS

#### A. State Laws – Oregon Administrative Rules and Oregon Revised Statutes

##### 1. Introduction

*In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.*

*Statewide Land Use Planning Goal 4, "Forest Lands" is:*

*"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."*

ORS 197.732(2) states, in relevant part:

*(2) A local government may adopt an exception to a goal if:*

- (a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]*
- (b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;*

*\* \* \**

- (4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (2) of this section have or have not been met.*
- (5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.*

*\* \* \**

- (8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:*
  - (a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;*

*(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and*

*(c) Complies with standards under subsection (1) of this section.”*

Planning Goal 2, part II, states:

*A local government may adopt an exception to a goal when:*

*(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]*

*(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”*

**FINDING:** Both the goal and OAR 660-004-0005(1)(c) adopt the legislative definition of an “exception” with minor variation— the goal states “Complies with standards for an exception” and the rule states “Complies with. . . the provisions of this division.” OAR 660-004-0010(1) explains, “The exceptions process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” and includes “Goal 4 ‘Forest Lands.’”

Goal 4 provides that: “Where a ... plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

Rule definitions of “resource land” and “nonresource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be planned and zoned for forest-farm uses, a rural residential, nonresource category of uses under the County’s plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC’s rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state’s forest land base. These reasons are addressed below.

## **2. Exception Requirements for Land Physically Developed to Other Uses.**

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

*OAR 660-004-0025 states:*

*(1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)*

(2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** To determine the extent to which the property is physically developed, staff compared where driveways and existing structures are, and identified them in the following map:

**Figure 1: Development**

This map demonstrates that currently approximately 12.5% is physically developed. That leaves 87.5% available for farm or forestry uses. These numbers are for discussion purposes and to estimate what is currently physically developed, and what is not (but may still be used by the landowner for farm or forest uses). Although most of the County's commercial timber use occurs in National Forests or in lands owned by large lumber companies such as Weyerhaeuser or SDS, small woodlots owned by individuals and small families play a vital role in the industry as well. These lands are often those that abut or intermingle with rural residential uses, and in many cases the tax benefits can be the only way to afford to successfully manage (for both fire safety as well as timber harvesting) several dozen acres of

woodland that may accompany that rural residential life style. Collectively across Oregon, many thousands of acres of forested lands are owned in these small parcels, and Goal 4 seeks to protect them from the effects of rural sprawl. A woodland as small as two acres qualifies for Oregon's Special Assessment Program for Forestland, allowing landowners to have a reduced property tax assessment. With 87.5% (35 Acres) of undeveloped land on the subject parcel, this land could still be useful under Goal 4 provisions. However, whether that land is capable of supporting commercial timber production depends heavily on other factors such as available soil type and slope.

### *Soils*

Two soil types are identified on the subject parcel: 49C and 50D (Wamic Loam – see Exhibit 5). Both are Class IV soils. The "Guide for using Soil Survey Single Phase Interpretation Sheets" (also known as the Green Sheets – See Exhibit 6) states that Class IV soils "have very severe limitations that reduce the choice of plants, require very careful management, or both". The Green Sheets maintains statistics on capability and yields per acre of crops and pasture, woodland suitability, windbreaks, wildlife habitat suitability and potential native plant community. These categories and the ratings for these two soil types are relevant to how well this property may be able to fulfill the requirements of Goal 4: Forest Lands by conserving forest lands for forest uses.

- Capability and yields per acre of crops and pasture (high level management)
  - Both soil types are listed as 4e (Class 4 which has "very severe limitations that reduce the choice of plants, require very careful management, or both", Subclass e which indicates that the main limitation is risk of erosion unless close-growing plant cover is maintained). Both soil types have Winter Wheat (35 bushels/acre) and Grass Hay (1.5 tons/acre) listed.
- Woodland Suitability
  - Both soil types are listed as 4A (Class 4, discussed above, and subclass A which represents slight or no limitations). For both soil types four out of five management problem categories are listed as having 'slight' or 'moderate' problem potential with plant competition the only one rated as 'severe' in both. Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover. Common trees on these soil types are Ponderosa Pine and Oregon White Oak with Ponderosa Pine listed as the only tree to plant. The site index for both is 70 which is an indication of the potential productivity and is based on the average total height of the stand the age of 100 years. A site index of 70 translates to the high end of Cubic Foot Site Class 6 (20-49 cubic feet per acre potential yield category) for Ponderosa Pine.
- Windbreaks
  - For both soil types the Green Sheets indicate "none" for Windbreaks. This states that windbreaks are not normally needed.
- Wildlife Habitat Suitability
  - This section relates soils to their potential for producing various kinds of wildlife habitat. For both soil types under "potential for habitat elements", hardwood and conifer trees are both rated as Fair. Under potential as habitat for: Woodland wildlife, the rating is also Fair.
- Potential Native Plant Community
  - For both soil types the same five grass and shrubs are mentioned as common, as well as two types of trees – Oregon White Oak and Ponderosa Pine.

A soils map is attached as Exhibit 7 (soil descriptions and their guide are contained in Exhibits 5 and 6).

### *Slope*

The property is mostly flat from the north to the center rising gradually from there to the south, east, and west. Slopes from the road to the southern property line average 6-10%. The low point of the parcel is in the northwest corner at about 1550' in elevation, 100' lower than the house at about 1650' and 210' below the high point to the southeast at 1760'. There are no slopes on the property that are too steep for either residential development or commercial forestry.

The vegetation of the subject parcel is split between open grassland in the north and center, with primarily Oregon White Oak interspersed with Ponderosa Pine, and a very few Douglas Fir around the edges of the property. Grasses and shrubs create moderately dense underbrush throughout.

The soils indicate some suitability for agriculture and there is history of such on both this parcel and the parcel to the south, also owned by the applicant (See below in b. OAR 660-004-0028 (2) for more detailed information about adjacent lands). The home on the applicant's adjacent southern parcel was approved in 1989 through the Conditional Use Permit process as a "Dwelling in conjunction with agricultural use." Additionally, an agriculture structure was placed on that southern parcel several years ago and retroactively approved through a Planning Commission action in 2017 (PLAAPL-17-10-0001). Discussions in the staff report for that decision, as well as application material including a Farm Management Plan, state that a portion of the parcel to the south is currently used for farm use, producing approximately 6 acres of alfalfa/oats, five poultry, and three cattle (seasonal), with plans upon the owners retirement to expand the farm use.

On the subject parcel itself, aerial imagery on County GIS (accessed November 8, 2018) appears to indicate several acres of crops in the western half of the open area at the center of the property. Beyond the three seasonal cows reportedly used on these parcels recently, the proposed exception area does not have a known history of commercially grazing for sheep or cattle.

The following Finding was made for the 2017 application in regards to agricultural use on the southern parcel in the tract:

*"According to Melanie Brown, Appraiser, the subject parcel is required to generate a minimum income of \$3,000 per year. She stated that the Assessor sends out a questionnaire every three years to determine what income has been generated from farm use. Assessor records indicate that the subject parcel has exceeded the income requirement for the past several years..."*

**APPROVAL FINDING:** The development pattern that exists on this property makes forestry uses impractical. These include the current home and outbuildings located halfway up the property on the western side after an approximately 1,000' driveway, the old farmhouse in the center after a 400' driveway and the old barn another 240' further south, within 450' of the rear property line. The latter two more than half bisects the property contributing to the physically developed nature of the subject parcel. Due to these physical developments, and the impracticality of conducting forestry uses around them, a physically developed exception would apply.

**DENIAL FINDING:** The clustering of the existing house on the western edge, with the 1000' driveway forming a property boundary line establishes very little physical development throughout the subject parcel. There are two old structures in the center of the property, along with another 640' driveway that runs north to south accessing them. However these are not useable in the condition they are in and the driveway would be as useful for commercial forestry uses in accordance with Goal 4 as it would

be for future residential uses in the event of an exception. Slope throughout the property is gentle, and soils are all Class 4, which, as discussed above, is conducive to forestry uses. This land has minor physical developments on it, but it is still available for forestry uses allowed by Goal 4, so a physically developed exception would not apply.

**3. Exception Requirements for Land Irrevocably Committed to Other Uses.**

*OAR 660-004-0028 contains standards for adoption of a “committed” exception.*

**a. OAR 660-004-0028(1):**

*(1) A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:*

*(a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;*

*(b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;*

*(c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.*

**FINDING:** This applicant proposes a ‘committed exception’ for this property, which is the ‘exception area’. The proposed goal exception applies to land in the Forest zone (F-2) and the ‘applicable goal’ that currently applies to these lands is Goal 4: Forest Lands.

**APPROVAL FINDING:** An exception to remove this parcel from the forest zone and transfer it to a non-resource “Farm-Forest” (FF) zone would still promote and permit many of the uses allowed in Goal 4 designated areas. More importantly, granting the request will promote economically efficient forest practices on large forested tracts south of the subject property, in a manner more consistent with sound management practices.

**DENIAL FINDING:** The map above in section OAR 660-004-0025(2) dealing with physically developed exceptions indicates that only 12.5% is developed, with only 7.5% being used for residential purposes (the other older structures and driveway are unused). Additionally, those residential uses are clustered along the western property line. The applicant claims that the 40 acre site is irrevocably committed to residential uses, when in fact only 12.5% is committed to general development, and only 7.5% committed to residential use. This leaves 87.5-92.5% remaining for forest use. As discussed above in a thorough review of the soil types on site and how they are classified, staff finds that the portion that remains uncommitted to residential use is sufficient to be used for a forestry use. Though there are portions that are grass land currently and portions that are farmed currently, there are also portions that have small amounts of merchantable timber present, as well as the soil conditions to grow more if a landowner so desired to make that investment in the future of the land. Combined with the 69 acre adjacent parcel to the south, also owned by David Wilson, this tract consists of 109 acres of land with commercial timber potential. Small woodland forests are found throughout the Pacific Northwest and are a viable means of using this land productively while meeting the applicable statewide planning goal

#4: Forest Lands. Staff does not find that the existing residential commitment of 7.5% of the property qualifies it as committed to the extent where a goal exception could apply.

- b. OAR 660-004-0028(2): “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:*

*(a) The characteristics of the exception area;*

**FINDING:** The characteristics of the exception area are fully discussed in the findings above in response to OAR 660-004-0025.

*(b) The characteristics of the adjacent lands;*

**FINDING:** The parcels immediately adjacent to the exception area have substantially similar characteristics for terrain and soil types (See Exhibit 7, Soils map, and Exhibit 8, Submitted Maps). North of Sevenmile Hill Road and West of the Osburn Cutoff Road, the land is at a lower elevation and has fewer trees.

The areas to the north and east of the proposed exception area have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the four subdivisions in the area, three were platted in the early part of the 20th century, and the fourth in 1979 (Fletcher Tract-1908; Fairmont Orchard Tracts-1911; Sunnysdale Orchards-1912; Flyby Night Subdivision-1979). For three of these subdivisions, the majority of the lots are approximately 5 acres in size. The county has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Between 1994 and 1997, the exception area and the lands surrounding it were included in what Wasco County collectively designated as the “Transition Lands Study Area” (TLSA). The county performed an analysis of the area, in part to determine where rural residential development would be appropriate. The final report for the TLSA was published on September 12, 1997, (Exhibit 1) and included recommendations outlining the sub-areas within the study area that were suitable for residential development. The exception area and the lands to the north and east were determined to be suitable for further rural residential development. Certain zone changes have been processed as part of the TLSA program to further the development of residential uses in the area surrounding the exception area.

The exception area is surrounded on two sides (north and east) by residential development and land zoned for rural residential development, under the three non-resource rural residential zoning designations, R-R(10), R-R(5) and F-F(10). The parcel immediately to the south is zoned for forestry uses, but is used for residential and small scale agricultural uses. Lands south of that, and immediately west of the subject parcel and proposed exception area are generally used for commercial forestry. See the map below for a visual representation of the area.

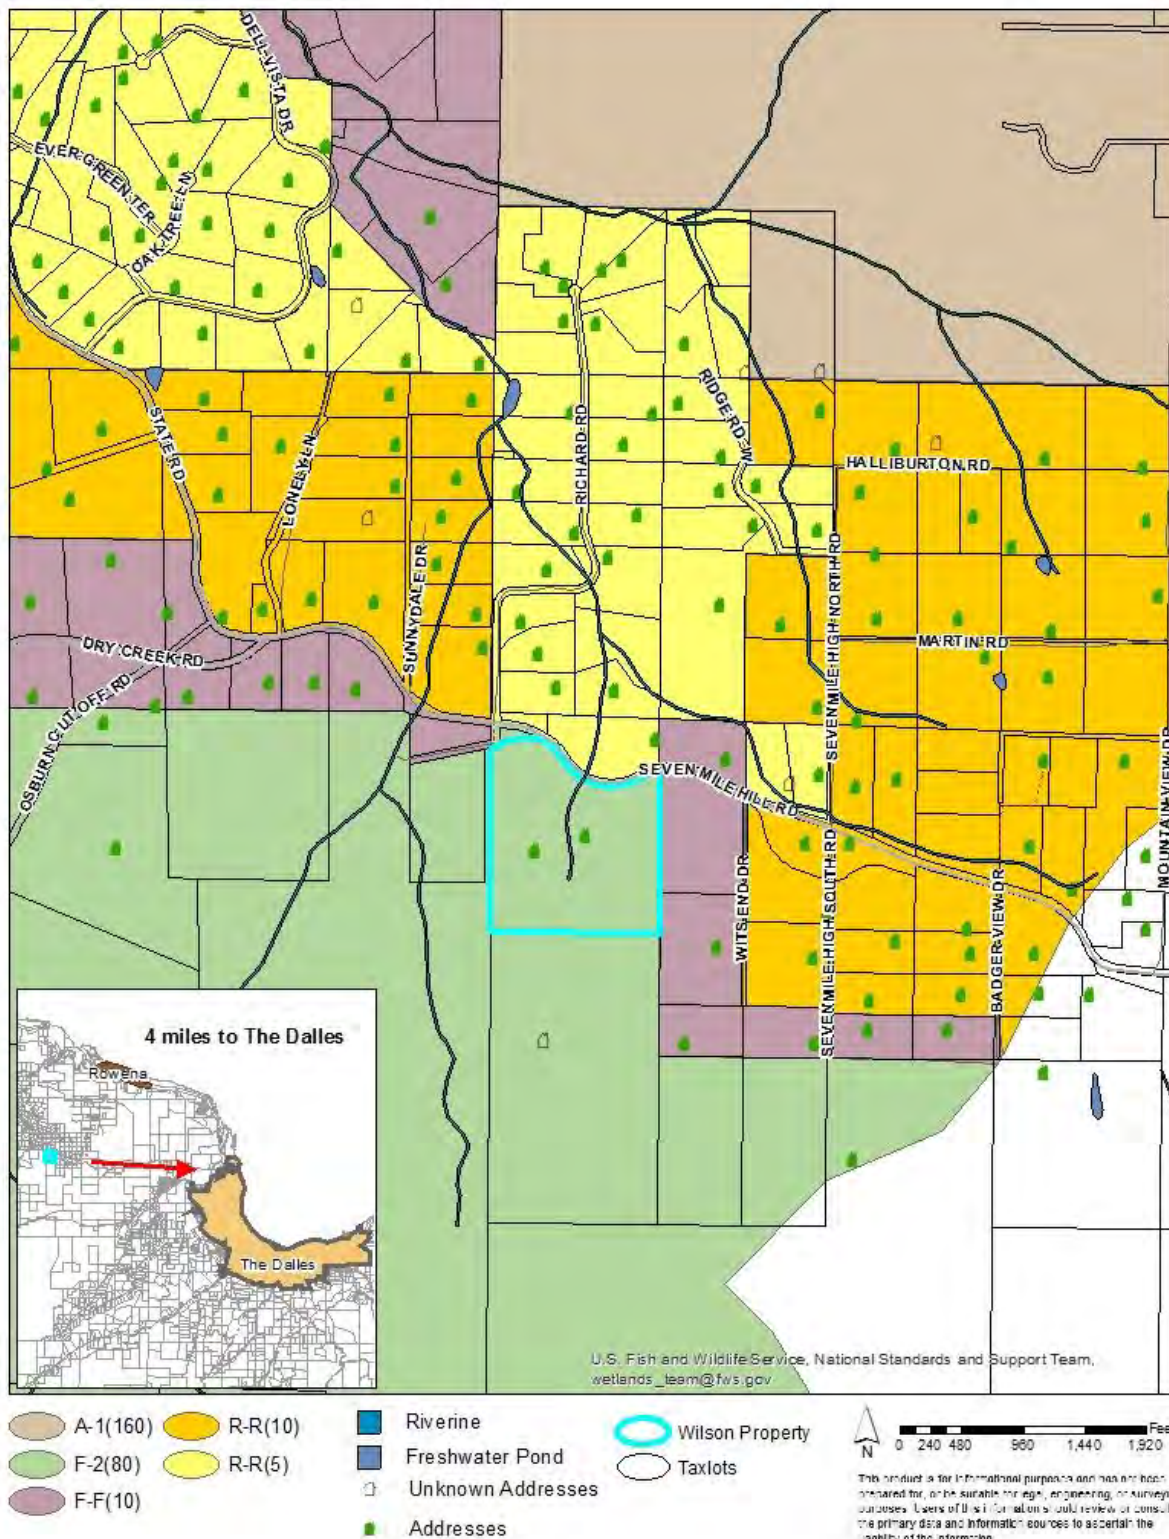

Figure 2: Wilson Vicinity Map

**East:** Directly to the east, north east, and south east of the proposed exception area are three parcels zoned F-F(10): T2N R12E, Section 22, Lots 4700, 4300, and 4200. Two of these lots abut the eastern boundary of the subject parcel, and the third is just across Sevenmile Hill Road to the north. Two of the three lots have residences.

The three abutting rural residential lots to the east are part of a small rural subdivision called Fairmont Orchard Tracts, filed August 5, 1911. The subdivision is located entirely in the SW quarter of Section 22, Township 2 North, Range 12 East. It was originally composed of nine lots, Lots 1-6 and Parcels A, B, & C. The numbered lots were generally to the south of Sevenmile Hill Road, oriented in a north-south rectangle, while the lettered parcels form a flagpole on the north side of Sevenmile Hill Road, running west to the western boundary of the section. The lot sizes ranged from 6.08 Acres to 13.22 acres on the original plat, making the average lot size 9.66 acres. Over time, three of the original lots have been partitioned into smaller lots, resulting in 12 lots, the smallest being 0.75 acres. The average size is now 6.85 acres.

There are three zoning designations covering the area east of the exception area, F-F (10), R-R (10), and R-R (5). After 0.6 mile, the National Scenic Area boundary begins, with zoning designations of predominantly (GMA) A-1 (160). In 1999, Wasco County revised the zoning of the lots 0.1 mile east of the subject parcel, changing them from F-F (10) to R-R(10). (County Ordinance 99-111, amending Ordinance 97-102) According to goals established in the TLSA project, the change in zoning was part of a process seeking to allow the expansion of rural residential uses in this 'transition' area between the more developed areas to the north and the large scale forestry/agricultural uses to the south. These zone changes were objected to and appealed, partly on the basis that they were likely to diminish the buffer between commercial forestry and rural residential uses in the area and increase conflicts between those uses. (LUBA appeal No. 99-178)

**North:** Immediately north, but still on the south side of the road and zoned F-2 (80), is a vacant 0.7 acre triangular parcel owned by the County that covers the piece of land between the old Seven Mile Hill Road and the current Seven Mile Hill Road. Across the road to the north are two lots that were also part of the Fairmont Orchard Tracts subdivision discussed above. These lots are 0.7 acre (vacant, owned by Wasco County) and 7.9 acres (single family dwelling with associated accessory structures). Both of these lots are in R-R (5) zoning.

The Fly-By Night subdivision lies north of the Fairmont Orchard Tracts subdivision. Three parcels were reconfigured in a partition plat in 2017. All lots due north of the subject property for 0.8 mile are zoned R-R (5). After that the land becomes A-1 (160) exclusive farm zone for another 0.8 mile until it reaches the National Scenic Area boundary.

Property to the northeast is discussed above. To the northwest lies the Sunnydale Orchards Subdivision. All lots in this subdivision north of Seven Mile Hill Road are in R-R (10) zoning, and those south of and along the road are F-F (10). The majority of this subdivision is developed with single family dwellings and associated accessory buildings. North of Sunnydale Orchards there are other subdivisions with both F-F (10) and R-R (5) zoning.

All of the area north of the proposed exception area is built and committed to low and medium density rural residential uses in these two platted subdivisions: Sunnydale Orchards and Flyby Night.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less

than ten acres each. The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions.

The area to the north is the most heavily developed area surrounding the proposed exception area. As can be seen in the map above in Figure 2, virtually all lots to the north of the exception area have been improved with a residence or a manufactured home, with few exceptions.

**West:** There are two properties immediately adjacent to the proposed exception area to the west. The northern parcel is 16.3 acres, with the north 1/3 zoned F-F (10) and the southern 2/3 zoned F-2 (80). This property is not developed. The adjacent property to the southwest of the subject parcel is 439 acres, and is in commercial forestry, owned by Ken Thomas. F-2 (80) zoned land stretches almost a mile due west of the subject parcel, across Osborn Cut-Off Road, before it reaches the Fletcher Tract subdivision with F-F (10) zoning. The majority of that area with F-2 (80) zoning is undeveloped, with the exception of three single family dwellings along Osborn Cut-Off Road.

Fletcher Tract was recorded on June 6, 1908 and contains a total of 32 parcels, almost all roughly 5 acres each. The lots are oriented in two long north-south columns of 16 lots each, with a north-south roadway between the two columns. The roadway north of Dry Creek Road was vacated in 1977, but a private road still exists. The portion of this platted road south of Dry Creek Road has never been developed (according to aerial photographs), although there are some private access roads leading to the developed parcels. For the purposes of this report, information was collected on 11 lots in the subdivision. Most of the lots have remained separate 5-acre parcels, but a few have been combined under single ownership into larger lots (Tax lots 1000, 2200, 700, 2600, 2700). The 15.29-acre lot (Lot 1000) is the largest parcel in the Fletcher Tract.

The current zoning for the entire Fletcher Tract is F-F (10). Beyond the subdivision to the west and south are large parcels zoned F-2 (80). According to Planning Department records, the Fletcher Tract has been zoned F-F (10) since the implementation of zoning in the county.

Several of the lots in the Fletcher Tract are in common ownership forming larger tracts, more in keeping with smaller, 10-15 acre woodland lots. When looking at them as individual lots, the majority have no improvements. However, in the area south of Dry Creek Road, five of the lots in the 'eastern column' are in common ownership (Tax Lots 900, 1000 and 1100, covering subdivision Lots 9-13), with a residence on one of those lots. Similarly, three of the lots in the 'western column' are in common ownership (Tax Lots 2100, 2200 and 2300, covering subdivision Lots 20-23), with a residence on two of them. Considering this pattern of use, the majority of the land area is dedicated to non-resource, residential uses. Additionally, because the establishment of the lots predates zoning in the area, each 5-acre parcel could conceivably be developed with a rural residence.

**South:** The area directly adjacent to the exception area to the south is one 69 acre parcel, also owned by the applicant and bisected by a BPA power transmission line running southeast to northwest. There is a single family dwelling and several accessory structures on this parcel, which is zoned F-2 (80). No commercial forestry occurs there. Continuing further south, land is zoned F-2 (80) for approximately 5 miles (crossing Chenoweth Creek Road after 1.5 miles) until it runs into the F-F (10) zoned areas surrounding Wells Road southwest of The Dalles. That region is undeveloped, with the exception of two parcels along Chenoweth Creek Road, and is primarily being managed for forestry or large scale agricultural (mostly grazing) uses.

*(c) The relationship between the exception area and the lands adjacent to it;*

**FINDING:** As described in preceding sections of this submittal, the exception parcel is immediately abutted to the south and west by F-2 (80) Forest zoned property (69 and 439 acres), to the north across Seven Mile Hill Road by R-R (5) Residential zoned property (7.9 acres), and to the east by F-F (10) Farm Forest zoned property (averaging 10.8 acres). The properties to the south and west are resource zones while those to the north and east are non-resource zones.

All are in separate ownerships, except the 69 acre F-2 parcel to the south, which is also owned by the owner of the subject property of this application, David Wilson. Combined with the subject parcel that is a 109 acre tract of resource zoned Forest land. There is another home on the southern property and a shop that is utilized by the applicant for farm use (according to information from previous Land Use decisions found in PLAAPL-17-10-0001 and PLAPAR-17-05-0002) on the southern property. The southern parcel is accessed by the same driveway that accesses the existing home on the subject property, running along its western edge.

The County GIS map shows that the western boundary of the subject parcel abuts a narrow spur of the larger 439 acre commercial forestry operation to the south west of the two parcels owned by David Wilson. That spur appears to be able to provide access to Seven Mile Hill for that forestry operation. Immediately to the west of that is the 16 acre parcel described in (b) above as being 1/3<sup>rd</sup> F-F and 2/3 F-2 zoned property. That parcel abuts Seven Mile Hill Road but current access is shared along the northern 120 feet of the subject parcel's driveway. No dwellings exist on that property.

The subject property does not have any special relationships with the other non-resource properties adjacent to it.

*(d) The other relevant factors set forth in OAR 660-004-0028(6).*

**FINDING:** These factors are discussed below.

- c. OAR 660-004-0028(3): "Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is 'impossible.' For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;*

*(a) Farm use as defined in ORS 215.203;*

*(b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;*

*(c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a)."*

**FINDING:** This application seeks an exception to Goal 4: Forest Lands, where the primary goal is to “conserve forest land for forest uses”.

ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. “Farm use” includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. “Farm use” also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. “Farm use” also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. “Farm use” includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. “Farm use” does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including “farm use” and “propagation or harvesting of a forest product,” and OAR 660-006-0025(2)(a) states:

- (a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

The “forest products” definition can be found in ORS 532.010(4), which states that forest products are “any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores.” An examination of Farm Uses and their potential on this property are also relevant as indicated by OAR 660-004-0028(3) above. There are currently agricultural practices occurring on the subject parcel and the adjacent property to the south in the same ownership tract as described above in *OAR 660-004-0028(6)(c)(B)*. The uses on the adjacent tract in the same ownership are relevant due to a requirement to examine “*the relationship between the exception area and the lands adjacent to it*” when examining a potential irrevocably committed exception as discussed above in OAR 660-004-0028(2).

OAR 660-006-0025 describes those “Uses Authorized in Forest Zones”. An exception granted to this goal may have an impact on these types of uses. This OAR describes five (5) general types:

- “(a) Uses related to and in support of forest operations;
- (b) Uses to conserve soil, air and water quality and to provide for fish and wildlife resources, agriculture and recreational opportunities appropriate in a forest environment;
- (c) Locationally-dependent uses, such as communication towers, mineral and aggregate resources, etc.

(d) Dwellings authorized by ORS 215.705 to 215.755; and

(e) Other dwellings under prescribed conditions”

In regards to (c), no aggregate sites have been identified on this property, nor is there anything about it's location that makes it significant for communication towers. In regards to (d) and (e) there is currently an existing dwelling on the parcel, with no potential for further dwellings under current rules in the Forest Zone. That leaves (a) and (b) as the primary uses which must be safe guarded on this property in accordance with Goal 4: Forest Lands.

The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means “not capable of being carried out in practice,” according to Webster’s New World Dictionary (2nd College Ed., 1980). “Capable” means “having ability” or “able to do things well.” Id. Finally, “in practice” means by the usual method, custom or convention. Id. Webster’s Third New International Dictionary, (Unabridged Ed., 1993) defines “impracticable” as “**1a** : not practicable : incapable of being performed or accomplished by the means employed or at command : infeasible \* \* \* **c** : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*”

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice in the exception area. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

#### APPROVAL FINDING

The current level of residential development has increased to the point that commercial resource use has become impracticable. The exception area is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that competes with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable. To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the suitability of the area for farm uses. Due to the existing parcel size, climate and development in the area, it cannot be, and is not, currently employed for the primary purpose of obtaining a profit from agricultural uses, though small scale farm uses do exist on the property and that of the same tract to the south. The area can support these small-scale, “peripheral” farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

DENIAL FINDING: One significant conflict is the risk of fire. The increased numbers of residences increase the risk and potential severity of fires, because fires caused by humans add to the frequency of natural fires. Human occupation is always associated with quantities of flammable materials and fire accelerants, such as fuels on household products. The impact of the fire risk is magnified not just by the number of residences but also physical features, including terrain, climate and vegetation (see discussion earlier).

Based on the current composition of the subject parcel as being predominantly open space, or oak, with some areas of Ponderosa Pine and a few Douglas Fir trees, it is not currently composed of enough marketable timber to harvest in the near future. However, those open areas can be planted, and the soil types are good enough to support merchantable timber, as discussed in findings above for OAR 660-004-0025. The applicant did not sufficiently demonstrate the impracticability of utilizing the 35 undeveloped acres. On the contrary, the state of Oregon, and Wasco County, recognize the ability to have as little as 2 acres of woodlands to qualify to receive tax reductions for forestry uses. The current owner's lack of interest in forestry uses on his property does not preclude it from having potentially valuable merchantable timber in the long run. The slopes, soil types, and ability to be used for small scale agriculture demonstrate that this parcel could practicably be used for forest uses per OAR 660-004-0028(3).

- d. *OAR 660-004-0028(4): "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."*

**FINDING:** All applicable factors of section (6) are addressed below.

APPROVAL FINDING: The applicant's statement and exhibits address all applicable factors and reasons why the facts support the conclusion that uses allowed by Goal 4 are impracticable in the exception area, as described throughout this report.

DENIAL FINDING: The applicant submitted extensive statements and exhibits explaining their position on why they feel that the facts support the conclusion that uses allowed by Goal 4 are impracticable. However, staff has found these statements and exhibits to be inconclusive in that attempt, with reasons given throughout this report.

- e. *OAR 660-004-0028(5): "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands."*

**FINDING:** The proposal is for a goal exception, zone change, and comprehensive plan amendment for one parcel. This parcel makes up the entirety of the "exception area". This parcel is physically developed as described above. Findings of fact and a statement of reasons why this land is found **to be to not be** irrevocably committed are discussed throughout this report.

- f. *OAR 660-004-0028(6): Findings of fact for a committed exception shall address the following factors:*

*(a) Existing adjacent uses;*

**FINDING:** The existing adjacent uses are discussed and considered in great detail in sections 2.3.3 and 2.3.4, above. Existing adjacent uses to the north and east are residential, and zoned as such. (see Map above, Figure 2) The land immediately to the south is zoned for forest, but used as residential. The remainder of all land south and south west of the subject parcel is zoned for, and used as, commercial forestry.

*(b) Existing public facilities and services (water and sewer lines, etc.);*

**FINDING:** There are no public water or sewer facilities on either the adjacent land or the exception area. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities. See prior findings under Chapter 11, Section H regarding statewide planning goals.

*(c) Parcel size and ownership patterns of the exception area and adjacent lands:*

*(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”*

**FINDING:** As discussed in great detail above and in the attached exhibits, some of the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the exception area were not successful because of the cold and dry weather at this location and elevation. Most of the existing lots (many of which were created by subdivision later in the 1970s as discussed above) have non-resource residences located on them now, as does the subject parcel in the proposed exception area.

*(B) Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land’s actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate*

*ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.*

**FINDING:** The subject parcel is 40.6 acres, owned by David and Jolene Wilson. David Wilson also owns the land to the south, a 69.3 acre parcel, bisected by the BPA powerline, with one residence and associated accessory buildings. Neither parcel is currently engaged in forestry activities. The parcel to the south is engaged in Farm Use, with a Planning Commission approved agricultural structure and Farm Management Plan. That parcel is not included in this proposal for a rezone, goal exception and comprehensive plan amendment. Contiguous total acreage is 109.48 acres. Per criterion B, both parcels in contiguous ownership shall be considered together in relation to the land's actual use – in this case the southern parcel is an active farm.

In relation to most forestry operations, a 40.6 acre parcel is a small parcel. According to Criterion B, the nature of its small size is not enough to constitute irrevocable commitment. However, also according to Criterion B, small parcels are more likely to be irrevocably committed if they are developed and clustered around a road designed to serve them. In the case of the subject parcel, there is one large residence in use near the eastern boundary, as well as older structures formerly used as a residence and a barn in the center. Finally Criterion B encourages consideration of whether a property stands alone among larger farm or forest operations, or is buffered from them. For the subject parcel, there is no buffer to the south or southwest as the property to the southwest is in commercial forestry and the one to the south, owned contiguously by the applicant, David Wilson, has farm uses on it. The next parcel south of that is 336 acres used predominantly for grazing. The parcel to the east (southeast adjacent to the subject parcel) is 439 acres of land used for forestry. All nearby lands to the north and west are residential. The subject parcel does not stand alone amongst larger operations, but nor is it buffered from them.

*(d) Neighborhood and regional characteristics;*

**FINDING:** Based on the descriptions already provided in this submittal, the “neighborhood characteristics” can best be described as commercial timberland to the south, and rural residential development within the area and on every other side. The “regional characteristics” include location, six miles west of The Dalles and 0.2 mile from the closest boundary of the Columbia River Gorge National Scenic Area.

*(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;*

**FINDING:** There are no natural impediments separating the proposed exception area from resource land. There is man-made feature separating the proposed exception area from existing commercial timberlands to the south—the BPA Bonneville-The Dalles power line right-of-way/easement—which forms a 150-foot wide cleared area between the residence on the subject property and commercial forest areas to the south. This power line is located on the adjacent property approximately 1/3 mile south of the subject property's existing residence (1/5 mile south of the southern property line) and runs slightly northwest to southeast. As described above, the 69 acre parcel owned by the applicant to the immediate south of the subject property has an existing residence (which lies north of and adjacent to the power line) and is in residential use. The power line bisects that property. The 440 acre adjacent property to the southwest of the subject property is owned by Ken Thomas, a private landowner who

engages in forestry operations on his extensive Wasco County land holdings. The power line separates the northern 70 acres of that parcel from the southern 370 acres, all of which is in the F-2 (Forest) Zone. This impediment feature is not insurmountable or impassable to forest uses.

(f) *Physical development according to OAR 660-004-0025; OAR 660-004-0025 states the "Exception Requirements for Land Physically Developed to Other Uses" as follows:*

- (1) *A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.*
- (2) *Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception."*

**FINDING:** Part of the justification that the applicant has given for this exception is that a dwelling currently exists on the subject parcel. The exact nature and extent of this house and other structures on the property are identified in Figure 1 above. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is 40.6 acres. If the zone change were to be approved, this land would become F-F (10) and three additional dwellings could be built there.

**APPROVAL FINDING:** The current home, abandoned old home, and associated outbuildings are current and former residential uses on this property. Though there is open space on roughly half the eastern portion of the property, it is predominantly oak and open grassland which is not suitable for forestry uses as described and supported in Goal 4. A driveway runs along and near the western property line that connects to another residence on the property to the south of the subject parcel. This development – buildings and residential access ways – qualify as uses not allowed by the applicable goal, Goal 4 in this case.

**DENIAL FINDING:** The current home and driveway are clustered against the eastern property line. There are abandoned (potentially historical) structures near the center of the property, accessed by another driveway. However, the entire eastern and southern portions of this 40.6 acre parcel are undeveloped. Much of the center of the property is currently grassland, but the eastern edge and southern half are wooded with oak and ponderosa pine. Ponderosa Pine is a marketable forest product and the soil characteristics of the parcel demonstrate that more could be grown for harvest in this area, as described above. Though there are buildings on the subject parcel, they do not dominate the landscape, and forestry uses allowed by goal 4 could still be cultivated across much of the property. These structures do not constitute enough physical development to justify a goal exception in a forest resource zone.

(g) *Other relevant factors;*

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

- g. ORAR 660-004-0028(7): The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.*

**FINDING:** The submittal complies with this requirement, and includes various maps of the proposed exception area and adjoining lands submitted with the application as Exhibit 8. Tables, charts, and summaries are also included within the submittal and as exhibits to this narrative, along with maps and other materials.

- h. ORAR 660-004-0040: Application of Goal 14 Urbanization to Rural Residential Areas, states: The purpose of this rule is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.*

*Subsections -0040(1) through (4) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in ORAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in ORAR 660-004-0040.*

**FINDING:** ORAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning that would be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

ORAR 660-004-0040 (5) and (6):

- (5) The rural residential areas described in Subsection (2)(f) of this rule are “rural lands”. Division and development of such lands are subject to Goal 14, which prohibits urban use of rural lands.*
- (6)(a) A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres, except as is required by section(8) of this rule*
- (6)(b) A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone’s minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a*

*local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.*

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed F-F (10) zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

OAR 660-004-0040 (7) and (8):

*(7) After October 4, 2000, a local government's requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division."*

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

*(8)(a) The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule."*

**FINDING:** The proposed F-F (10) zone will prevent the creation of any new lot or parcel in the area smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

*(b) Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area.*

**FINDING:** The minimum lot size for the area would be ten acres in the F-F (10) zone. For a PUD, a permitted use in the F-F (10) zone and in which dwellings could be clustered away from commercial forestry uses, the minimum property size is 2.5 acres, and the overall density of the PUD cannot exceed a ratio of one dwelling for every ten acres in the PUD.

*(c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.*

**FINDING:** The minimum lot size of the proposed F-F (10) zone would be ten acres, and that minimum lot size would apply in the proposed exception area.

*(d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.*

**FINDING:** The County's land use regulations do not specify a minimum lot size smaller than two acres for the proposed F-F (10) zone.

*(e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (A) through (H) are met:*

**FINDING:** The F-F (10) code permits planned unit development (PUD). In the event that a zone change to that designation is approved by the County then PUDs may be authorized if (A) through (H) are met.

*(A) The number of new single family dwellings units to be clustered or developed as a PUD does not exceed 10.*

**FINDING:** The proposed F-F (10) zone on the 40.6 acre subject parcel would result in a maximum of three (3) additional dwellings which does not exceed 10.

*(B) The number of new lots or parcels to be created does not exceed 10.*

**FINDING:** The proposed F-F (10) zone on the 40.6 acre subject parcel would result in a maximum of three (3) additional parcels which does not exceed 10.

*(C) None of the new lots or parcels will be smaller than two acres.*

**FINDING:** The proposed F-F (10) zone specifies that no new lots can be smaller than 10 acres.

*(D) The development is not to be served by a new community sewer system.*

**FINDING:** There are no community sewer systems in the area, nor has one been requested. A community sewer system would not be approved for a PUD in this region. Development in this region is served by septic systems, approved by the North Central Public Health District.

*(E) The development is not to be served by any new extension of a sewer system from within an urban growth boundary or from within an unincorporated community.*

**FINDING:** The subject parcel is approximately four miles linearly and 1800' in elevation away from the nearest Urban Growth Boundary for the City of The Dalles. The unincorporated community of Rowena is 2.7 miles away and also much lower in elevation. No new extensions of any sewer systems, existing or future, will be extended to the Seven Mile Hill area.

*(F) The overall density of the development will not exceed one single family dwelling for each unit of acreage specified in the local government's land use regulations on October 4, 2000 as the minimum lot size for the area.*

**FINDING:** The 40.6 acre subject parcel contains one lawful single family dwelling. If the zone were to change to F-F (10), a total of four (4) (for a maximum of three (3) new) single family dwellings could be placed on this land, in accordance with County regulations for minimum parcel size in that zone as it existed on October 4, 2000.

*(G) Any group or cluster of two or more dwelling units will not force a significant change in accepted farm or forest practices on nearby lands devoted to farm or forest use and will not significantly increase the cost of accepted farm or forest practices there; and*

**FINDING:** For purposes of this finding, the area in consideration includes the surrounding rural residential areas to the west, north, and east, the commercial forestlands to the southeast, and the contiguous farmland to the south of the proposed exception area. The farm to the south is owned by the applicant. The forest land to the southeast has three options for access: it touches Osburn Cut-off Road 0.8 mile south of its intersection with State Road, as well as Seven Mile Road 650 feet east of the subject parcel. Additionally, it owns a strip of land immediately adjacent to the subject parcel's dwelling driveway access. Because there are two other locations for access, forestry uses may not need to utilize that driveway associated with the existing residence on the subject parcel to access their lands. In the event of forestry operations on the western boundary line of the forest property however, that access would be the shortest and easiest topographically. The addition of residences needing to use that driveway to access their homes could interfere with forestry use access to their land and increase the cost of hauling logs by forcing the owner to create a longer, steeper road from one of the other two access ways. The existing access serves the home on the subject parcel and another on the farm to the south. In the event of a zone change and additional residences on the subject parcel it is likely that either zero or a maximum of one additional dwelling would be sited using that access way, with the other two potential new dwellings being located at the site of the existing historic farmhouse, or along the eastern property line. Zero or one new residence, where two are served currently, would not significantly increase the overall impact of residences on adjacent farm and forest lands beyond what already exists along that access way.

*(H) For any open space or common area provided as a part of the cluster or planned unit development under this subsection, the owner shall submit proof of nonrevocable deed restrictions recorded in the deed records. The deed restrictions shall preclude all future rights to construct a dwelling on the lot, parcel, or tract designated as open space or common area for as long as the lot, parcel, or tract remains outside an urban growth boundary.*

**FINDING:** The Planned Unit Development section of the Wasco Count LUDO requires dedicated open space covering at least 60% of any PUD as well as "Articles of Incorporation of the Homeowners' Association formed to maintain common open space and other common improvements." Section 18.100 of the LUDO details Open Space requirements, including requirements to deed restrictions as laid out in Criterion H such that a conservation easement or other deed restriction be established to preclude all future rights to construct a dwelling on the lot, parcel, or tract designated as open space or common area for as long as the lot, parcel, or tract remains outside an urban growth boundary.

*(f) Except as provided in subsection (e) of this section or section (10) of this rule, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle.*

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed potential residential area, except in the event of temporary use permits.

- (g) In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(23) and (30) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule's requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.*

**FINDING:** The County is not proposing a new mobile home park or manufactured dwelling park as part of this proposal, in conformance with this section.

- (h) A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:*

- (A) The parcel to be divided has two or more permanent habitable dwellings on it;*
- (B) The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;*
- (C) Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;*
- (D) The partition would not create any vacant parcels on which a new dwelling could be established.*
- (E) For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).*

**FINDING:** Because the county is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

- (i) For rural residential areas designated after the effective date of this rule, the affected county shall either:*

- (A) Require that any new lot or parcel have an area of at least ten acres, or*
- (B) Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'"*

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one single family dwelling for every ten acres. Clustering of dwellings may occur in the

event of a PUD or particular land divisions. The purpose of allowing potential clustering of dwellings in the area is to encourage development of dwellings toward the northern end of the area, near existing roads and development, and away from forest resource lands and wildlife habitat areas to the south. This approach is consistent with OAR 660-004-0118 as discussed below.

OAR 660-004-0118 Planning and Zoning for Exception Areas

*(2) For "physically developed" and "irrevocably committed" exceptions to goals, residential plan and zone designations shall authorize a single numeric minimum lot size and all plan and zone designations shall limit uses, density, and public facilities and services to those:*

*(a) That are the same as the existing land uses on the exception site;*

**FINDING:** The proposed zoning is F-F (10) which has a single numeric minimum lot size of ten (10) acres.

*(b) That meet the following requirements:*

*(A) The rural uses, density, and public facilities and services will maintain the land as "Rural Land" as defined by the goals and are consistent with all other applicable Goal requirements; and*

**FINDING:** The proposed zoning is F-F (10) which is a non-resource, Forest-Farm zone. The purpose of this zone is described in Section 3.221 of the Waco County LUDO as: "to permit low-density residential development in suitable locations while reducing potential conflicts with agriculture uses, forestry uses and open space." "Rural Land" is defined by OAR 660-004-0040(2)(f) "lands that are not within an urban growth boundary, that are planned and zoned primarily for residential uses." Land within the F-F (10) zone is consistent with this definition of Rural Land as defined by the goals.

*(B) The rural uses, density, and public facilities and services will not commit adjacent or nearby resource land to nonresource use as defined in OAR 660-004-0028; and*

**FINDING:** OAR 660-004-0028 criteria for the subject parcel are addressed above. The subject parcel lies along Seven Mile Hill Road, which is a significant transportation corridor in the area. Access to adjacent and nearby resource lands does not depend on the subject property. The use of the subject property in a non-resource capacity will not commit adjacent or nearby resource land to non-resource uses as the potential addition of three dwellings will not impede access or resource use of adjacent or nearby properties.

*(C) The rural uses, density, and public facilities and services are compatible with adjacent or nearby resource uses;*

**FINDING:** The proposed zone for the subject property is Forest-Farm, F-F (10). The purpose of this zone is listed in Section 3.221 of the Wasco County LUDO as "to permit low-density residential development in suitable locations while reducing potential conflicts with agriculture uses, forestry uses and open space." This zone was designed as a non-resource buffer zone between rural residential zones and resource zones such as Forest or Agriculture zones.

The following information is in regards to immediately adjacent properties:

Direction	Account	Size	Zone	Use
North	1196	0.7	F-F (10)	Vacant
North	1195	7.9	R-R (5)	Residential
North East	1194	6.4	F-F (10)	Residential
East	885	13.2	F-F (10)	Vacant
South East	887	12.9	F-F (10)	Residential
South	13446	69.3	F-2 (80)	Residential/Resource
South West	399	439	F-2 (80)	Resource
West	400	16.3	F-2 (80)	Vacant
North West			F-F (10)	Vacant

The residential use of the subject property is compatible with adjacent uses. In general, lands to the south are F-2, resource lands. Lands to the east and west, immediately south of and adjacent to Seven Mile Hill Road are residential (F-F (10) or R-R (10)). Nearby lands to the north, across Seven Mile Hill Road are almost all either R-R (5) or R-R (10) and in residential use. The subject property is currently being used as both a residence and a small farm. The continued use of this land in a residential fashion would be compatible with nearby residential uses, but expanding would conflict with potential resource uses.

The BPA line that runs 1/5 mile south of the subject property is the only public facility nearby. Expanded residential use of the subject property would not affect the use and operation of this transmission line. Public services used by the nearby area include roads, police, fire, electrical, telephone, and solid waste disposal. The potential addition of a maximum of three new single family dwellings along Seven Mile Hill Road would have a negligible effect on roads, police, electrical, telephone or solid waste disposal services. There is a slight increased risk of wildfire with the increase of residential use in this wildland-urban interface area.

Sewer services in rural areas of the County are handled with individual septic systems. Nearby and adjacent residential uses on ten acre parcels of land have not encountered difficulty establishing sufficient septic systems. In a November 7, 2018 email John Zalaznik, Environmental Health Supervisor for the North Central Public Health District, stated (in reference to the subject property):

“I think in general that area could accept on site systems. The area looks like it is mostly treed so in general those sites have deeper soils than those open meadow sites. The soils can change so fast though I would not be certain until site evals are done.”

Water services in rural areas of the County are handled with individual private wells. There has been widespread concern in the Seven Mile Hill area about a gradually withdrawing water table requiring deeper wells and occasionally resulting in neighboring wells drying up. The addition of three new private wells could have a slight effect on available water supplies for established residential uses in the area. According to an October 12, 2018 email between staff and Watermaster Robert Wood, “Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average”. The Oregon Water Resources Department is “not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn’t available within the capacity of the resources.” He stated that those uses that are exempt from water rights, such as “single or group

domestic use, irrigation of no more than ½ acre lawn/ noncommercial garden, stock use” are still being allowed but that new rules are in place requiring more stringent well construction.

*(c) For which the uses, density, and public facilities and services are consistent with OAR 660-022-0030, "Planning and Zoning of Unincorporated Communities", if applicable, or*

**FINDING:** The proposal occurs in the Seven Mile Hill area of Wasco County. There are no incorporated or unincorporated communities in the area. This criterion is not applicable.

*(d) That are industrial development uses, and accessory uses subordinate to the industrial development, in buildings of any size and type, provided the exception area was planned and zoned for industrial use on January 1, 2004, subject to the territorial limits and other requirements of ORS 197.713 and 197.714*

**FINDING:** The proposed change to Forest-Farm F-F (10) zone does not involve an industrial zone, or a proposal for any industrial development. On January 1, 2004 the zoning of the property was not industrial – it was an F-2 Forest zone. As no industrial use is proposed, nor any accessory uses to industrial development, this criterion does not apply.

## **B. Wasco County Comprehensive Plan**

### *Chapter 11 Revisions Process*

#### **A. Intent and Purpose**

*The Comprehensive Plan for Wasco County including all urbanizable areas is the primary document which guides and controls land use within Wasco County excluding incorporated areas. The plan is intended to reflect the community's current thoughts on land use planning and to be responsive to the needs and desires of citizens. In order to achieve this, the plan must respond to changing community attitudes and needs and to unforeseen circumstances which may affect the use of land in the future. It is, therefore, the intent of this section to permit the amendments of the Comprehensive Plan on a periodic basis and to describe the procedure for the amendment process.*

**FINDING:** Chapter 11 of the Comprehensive Plan describes the revisions process for the plan. The intent and purpose makes it clear that it was intended to be altered periodically as the Community and the County sees fit. This application is consistent with Criterion A.

#### **B. A Comprehensive Plan Amendment May Take the Following Forms:**

*(\*\*\*)*

##### **5. A combination plan change/zone amendment. (Legislative or Quasi-Judicial)**

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan’s “Definitions—Existing Land Use Map” identifies the subject property as: “Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year.” Page 232 of the plan lists “Purpose Definitions of Map Classifications on the Comprehensive Plan Map.” The

existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield." In this section, the Forest-Farm zone purpose is stated as "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge." This application also includes a goal exception to Goal 4 since removing land from the F-2 zone removes land from a designated Resource Zone and places it in a Non-Resource Zone. This application is consistent with Criterion 5.

*C. Who May Apply For a Plan Revision:  
Comprehensive Plan Revision may be initiated by:*

*(\*\*\*)*

*3. Property owner or his authorized representative. (Quasi-Judicial)*

**FINDING:** This Quasi-Judicial application was submitted by David Wilson, the property owner of the subject parcel. This application complies with Criterion 3.

*(\*\*\*)*

*E. Quasi-Judicial Revisions*

*Quasi-Judicial revisions are those which do not have significant effect beyond the immediate area of the change, i.e., narrow in scope and focusing on specific situations. Each plan change or revision will first be heard by the Planning Commission on a first-come, first-serve basis. Such hearing shall be conducted in accordance with the Wasco County Planning Commission "Rules and Regulations".*

**FINDING:** This application is narrow in scope, focusing on one property. It will be heard by the Planning Commission first for a recommendation, then the Board of County Commissioners for a decision, in accordance with the Wasco County Planning Commission "Rules and Regulations". Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615, on February 26, 2019. This application is consistent with Criterion E.

*(\*\*\*)*

*H. General Criteria*

*The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:*

**FINDING:** These are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission and Board of Commissioners need only consider these criteria and determine whether they are generally satisfied.

- 1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.*
- 2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.*

**FINDING:** The following findings demonstrate how compliance **is is not** achieved with statewide land use planning goals that may apply to the request, as required to be considered by subsections 1 and 2 of H., the plan amendment General Criteria:

Goal 1 – Citizen Involvement. The purpose of Goal 1 is to ensure the “*opportunity for citizens to be involved in all phases of the planning process.*” Wasco County has included opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures such as public notice and public hearings for the proposed changes. Compliance with Goal 1 is ensured through compliance with the applicable Plan and zoning ordinance procedural provisions. These proceedings are being conducted with notice and hearings as required by law and County ordinance. Public participation will be a feature of Planning Commission and Board of County Commissioner meetings, which – by the time of this hearing - will have been sufficiently noticed to the public according to state law. Given this information, the proposal complies with Goal 1.

Goal 2 – Land Use Planning. The purpose of Goal 2 is “*to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.*” The County’s planning process has been acknowledged by the State as being in compliance with the Statewide Planning Goals, and was followed in consideration of the proposal. The “adequate factual base” is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal complies with Goal 2, requirements for the adoption of exceptions to a statewide goal.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal. Small-scale farming activities may be possible in the area, but are not likely to be affected by the allowance of three new rural residences.

Goal 4 – Forest Lands. Goal 4 provides for the preservation of Forest Lands for forest use. The property included in the proposed exception area is currently designated Forest Land but is not in forest use, nor is it in a forest assessor class (its assessor class is 401 for residential improved tract). As indicated by the applicant’s materials, the intention of this proposal is to preserve small-scale forest and farm uses, while allowing establishment of rural residences, through a conditional use process, under the County’s F-F(10) zoning. Because the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4.

**APPROVAL FINDING:** The exception is justified in part 2, addressing LCDC’s administrative rule requirements for “built” and “committed” exceptions. The proposal complies with Goal 4.

**DENIAL FINDING:** Part 2 below outlines how this application fails to meet Goal 4 requirements and does not adequately address LCDC administrative rule requirements for “built” and/or “committed” exceptions. The proposal does not comply with Goal 4.

Goal 5 – Open Spaces, Scenic and Historic Areas, and Natural Resources. The subject parcel is located within the Low Elevation Winter Range of the Big Game Wildlife Overlay. Wasco County recognizes in its Comprehensive Plan that big game herds are a valuable natural resource. The County Zoning Ordinance contains siting and development criteria, found in Zoning Ordinance Section 3.920, for lands within designated areas in the County. Goal 5 is met by the application of these standards to any development

within the designated Big Game Winter Range. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 – Air, Water, and Land Resources Quality. Goal 6 is *“To maintain and improve the quality of the air, water and land resources of the state.”* The proposed exception area is not located in a federal air quality attainment area, and three new single family dwellings will not generate significant additional air pollution. Sewage disposal needs of all new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is *“To protect people and property from natural hazards.”* Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The only natural hazard listed in the rule relevant to the request is “wildfires.” Chapter 10 of the Wasco County LUDO, created in 2007, establishes standards and requirements that ensure fire safe development throughout the County, and would apply to any additional residences or land uses in this area. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is *“To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.”* Under the current zoning, hunting and fishing operations are allowed outright without lodging, and parks and campgrounds are allowed as conditional uses. If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. Recreational needs can be achieved under both zoning designations. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is *“To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon’s citizens.”* The subject property is currently being used for one single family dwelling. A zone change to F-F (10) would potentially increase that to a maximum of four single family dwellings, an increase in economic development. It is not currently being used for forest uses, nor is it being assessed for forest tax deferral status. Previous analysis above in OAR 660 Division 4 Section 25 of soil types, as well as the current use of the neighboring approximately 1,100 acre tract for forestry to the south show that this parcel is in an area that does have potential to be used as part of a commercial forestry operation.

**APPROVAL FINDING:** The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with Goal 9.

**DENIAL FINDING:** The proposal promotes Goal 9 by allowing residential uses. However Goal 9 would also be promoted by encouraging forestry practices on this parcel, which the County considers to be the appropriate use of the subject property in view of its established zoning and the economic potential of timber and logging that exists, as outlined above in OAR 660 Division 4. The proposal is not consistent with Goal 9.

Goal 10 – Housing. Goal 10 is *“To provide for the housing needs of citizens of the state.”* The rule is directed to lands in urban and urbanizable areas, and encourages residential development to occur in existing urban areas. However, the proposal will allow development of additional rural residences in an area that is largely committed to existing rural residential uses. Guideline A(4) of Goal 10 states: *“Plans*

*providing for housing needs should consider as a major determinant the carrying capacity of the air, land and water resources of the planning area. The land conservation and development actions provided for by such plans should not exceed the carrying capacity of such resources.”* As noted in several locations of this report, impacts of the proposed exception area have been evaluated by this report for impacts to the air, land and water resources of the planning area. Consistent with Goal 10, the proposal will increase housing opportunities in an area where such uses may be appropriate.

Goal 11 – Public Facilities and Services. Goal 11 is *“To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.”* In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as community scale water and sewer services are not considered necessary or appropriate. The subject location is serviced by public roads that are regularly maintained and adequate to serve the exception area. Local fire and police services are provided by Mid-Columbia Fire and Rescue Department, the Oregon Department of Forestry, and the Wasco County Sheriff’s Office. Neither water nor sewer services are provided to the area, but both are available on the subject properties through individual wells and septic tank systems. Electric (Wasco Electric Co-op) and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres for a maximum potential of three additional residences) would be comparable to other nearby development. The proposal complies with Goal 11.

Goal 12 – Transportation. Goal 12 is *“To provide and encourage a safe, convenient and economic transportation system.”* Recent estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.07 at Seven Mile Hill Road and Chenoweth Creek Road according to the 2009 TSP. 2030 projections place V/C ratios at 0.21. Under the proposed exception area standards, it is estimated that a maximum of three new residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which would not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. Given this information, the proposal will have little impact on the transportation system serving the exception area because there will be a tiny increase in traffic generated by development that might occur as a result of the plan amendment and zone change.

In connection with Goal 12, the county is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is therefore in conformance with Goal 12 and the Goal 12 rule.

Goal 13 – Energy Conservation. Goal 13 is *“To conserve energy.”* In this case, Goal 13 is promoted through standards that require clustering of dwellings toward established roads. The potential for three additional dwellings in this area would result in an increase in energy use, but this goal is for conservation of energy, not elimination of its use. Use of the property for forestry purposes would also result in the expenditure of energy in growing, harvesting, and transporting the product. In neither case would the energy expenditure be significantly greater than uses allowed under current zoning. The proposal conforms with Goal 13.

Goal 14 – Urbanization. Goal 14 is “To provide for an orderly and efficient transition from rural to urban land use...” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No “urban” services will be required to allow the maximum amount of development contemplated by this proposal. In the TLSA Study, well water was noted as being available in the area in sufficient quantities to serve the proposed housing density that would result from a zone change to F-F (10) (see Exhibit 4, TLSA Groundwater Study). However, as discussed above in Background information, the Wasco County Watermaster, Robert Wood, and the OWRD have identified the Seven Mile Hill area as having decreasing water supplies since then. Any future application for property division or development will need to comply with their requirements regarding residential well water usage. The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 are coastal specific goals and do not apply in Wasco County.

3. *A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.*

**FINDING:** Webster’s least recriminatory definition of “mistake,” most appropriate here, is “a misunderstanding of the meaning or implication of something.” (Unabridged Ed., 1993). This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the area are more appropriate than the original designations. As noted previously, this area was evaluated as part of the TSLA – which posed a very similar question. The application materials assert that the County was incorrect in its characterization of the area as most appropriate for commercial forest uses. The materials attribute this to the fact that numerous residential lots were platted south of Sevenmile and Dry Creek roads before the designation of F-2 was made. Additionally, subsequent County land use decisions have allowed rural residential uses on both sides of Sevenmile Hill and Dry Creek roads. The applicant claims that the area now appears to be committed to residential uses, and no longer suitable for forestry uses. They argue that a change in the character of the neighborhood is evident, and justification for a Zone Change.

The TLSA study could be interpreted to support a conclusion that lands in this area are appropriate for rural residential uses. The TLSA evaluated lands in this area and recommended changes to some properties and not others. This property was evaluated but not rezoned. However, that was 20 years ago, and conditions continue to change. The County’s rezoning of several parcels south of Sevenmile Hill Road from F-F (10) to R-R (10) after completion of the TLSA Study, allowing development of nonfarm or forest dwellings as permitted uses supports this conclusion. The approval of dwellings in and immediately adjacent to the subject property also could support a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**APPROVAL FINDING:** To the extent the existing designation is a mistake, the proposal will effectively correct that mistake on the subject property by allowing development of residences in an area physically separated from actively managed commercial forest lands by a power line right-of-way/easement. The proposal also recognizes that the character of the neighborhood south of Sevenmile Hill Road has

changed from undeveloped forest and woodlot, to rural residential uses, and seeks to resolve existing conflicts between forest and residential uses.

DENIAL FINDING: The TLSA study was extensive in its evaluation of the Sevenmile Hill area, and ultimately concluded not to rezone the subject property, while rezoning others. The soils data, slope and other information available to staff indicate that the property is capable of being used for commercial forestry uses – although the current owners are not using the land for that purpose at this moment in time. The conversion of some properties south of the road to residential uses does not dismiss the need to hold the line somewhere between commercial forestry and single family dwellings. A conversion of this property would continue the mistake of allowing the encroachment of residential uses into resource zones in this area.

4. *Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.*

APPROVAL FINDING: This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses. Low intensity residential development would match the aesthetic surroundings of single family dwellings along both sides of Seven Mile Hill. Any risk of additional fire exposure is mitigated by County Fire Safety Standards that have been in place since 2007 and can be found in Chapter 10 of the WC LUDO.

DENIAL FINDING: An alteration from a forest use to a residential use increases the risk of fire in a fire prone area. This threatens the safety of adjacent forestry uses, as well as the encroaching residential uses in this area. In addition, the rural aesthetic of a country road would be further degraded by allowing additional dwelling development in an area full of wildlife and natural beauty. Staff finds that a consideration of these factors lends itself to maintaining this property in a resource zone rather than permitting a conversion to residential.

5. *Proof of change in the inventories originally developed.*

APPROVAL FINDING: The proof required by this section is provided by these findings and the attached exhibits. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed within, and in close proximity to the resource area, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed—demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small-scale farm and forest uses with limited density housing in a manner that promotes and improves protection of nearby forest resource lands south of the BPA easement.

DENIAL FINDING: This application asserts that due to adjacent uses being converted to residential uses, that the forest use of the subject parcel should also be changed to match. However, the encroachment of housing and incompatible residential uses into the forest zone should be halted and not encouraged in order to adequately accomplish Goal 4 objectives in this area. Staff does not feel that a "Proof of change in the inventories" has been established.

6. *Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.*

**FINDING:** As described throughout these findings, the proposed revisions are based on the TLSA study, County land use decisions in the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits.

**APPROVAL FINDING:** As evidenced by the discussion in this staff report, and the further supported by the Wasco County Comprehensive Plan, there is a public need for low-density rural residential uses, and for small scale farm and forest uses in the County generally as well as in the Sevenmile Hill area specifically. The justification for the particular change, addressed throughout these findings, is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. It is feasible to mitigate the potential impacts of fire in the area, by utilizing existing firebreaks, and imposing requirements for clustering dwellings; maintenance of fire breaks around dwellings; maintenance of adequate fire suppression water supplies, and similar practices in accordance with Chapter 10 Fire Safety Standards, of the LUDO. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

**DENIAL FINDING:** This application attempts to demonstrate that there is a public need for low-density rural residential uses, and for small scale farm and forest uses, in the County generally and in the Sevenmile Hill area specifically. The justification for the particular change is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. However, as discussed throughout the report, staff has determined that not enough information has been provided to support this change. That forestry/residential buffer is important to maintain and to establish this area as residential would erode it further in this area, which has already been impacted by excessive residential development affecting its water supply and putting forest reserves at risk of wildfire. The Commercial Forestry uses established by Goal 4 on this property under its current zoning are also an established public need in this County. Due to the existing potential for this property to still be used in that fashion, it has not been demonstrated or fully justified by this application and its exhibits that there is a public need for the requested change from a resource to a non-resource zone.

## **I. Transportation Planning Rule Compliance**

1. *Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). ‘Significant’ means the proposal would: (exclusive of correction of map errors in an adopted plan);*
  - a. *Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
  - b. *Change standards implementing a functional classification system; or*

- c. *As measured at the end of the planning period identified in the adopted transportation system plan:*
  - (1) *Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
  - (2) *Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
  - (3) *Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*
2. *Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:*
  - a. *Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.*
  - b. *Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.*
  - c. *Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.*
  - d. *Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.*
3. *Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance."*

**FINDING:** The proposal is to change the zoning for one 40.6 acre parcel from F-2 (80) to F-F (10), potentially resulting in a maximum of three new dwellings. At an average of 9.57 Average Daily Trips (ADT) per dwelling for a potential total of 29 new ADT, the impact from this proposal would not result in any change of functional class or allow land uses inconsistent with the current functional class of Seven Mile Hill/State Road. Staff finds that a separate Traffic Impact Analysis is not required because there would not be a "significant impact" under OAR 660-12-0060, the Transportation Planning Rule (TPR).

#### **J. Procedures for the Amendment Process.**

1. *A petition must be filed with the Planning Offices on forms prescribed by the Commission.*

(\*\*\*)

3. *Notification of Hearing:*

- (1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.*
- (2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.*
- (3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.*
- (4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.*
- (5) Upon receiving the Planning Commission's recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties."*

**FINDING:** Notice of the Planning Commission Hearing on April 2, 2019 complied with these requirements. They were submitted to The Dalles Chronicle for publication on March 13, 2019, which was between 20 and 40 days prior to the hearing. Criteria 3-5 and all other applicable statutory and local procedures will be followed in consideration of the proposal.

**C. Wasco County Land Use and Development Ordinance (LUDO)**

**Chapter 9 – Zone Change and Ordinance Amendment Zoning Ordinance - Chapter 9:**

**Section 9.010 – Application for Zone Change**

*Application for a zone change may be initiated as follows:*

*(\*\*\*)*

- C. By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the to establish the criteria for the change (quasi-judicial only);*

**FINDING:** This zone change proposal from Forest, F-2 (80), to Forest-Farm, F-F (10), was initiated by the owner of the subject property, David Wilson, on forms provided to him by the planning department, which he signed. All required information was included to address criteria. This is a quasi-judicial action.

*Section 9.020 – Criteria for Decision*

*The Approving Authority may grant a zone change only if the following circumstances are found to exist:*

*A. The original zoning was the product of a mistake; or*

*B. It is established that*

*1. The rezoning will conform with the Comprehensive Plan; and,*

**FINDING:** This zone change request includes a request for a plan amendment and an exception to Goal 4. The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by this criterion. These goals are discussed above in III.A. Wasco County Comprehensive Plan where the request was found **to be to not be** in conformance. This criterion would be met because the Comprehensive Plan would be amended specifically to support the proposed zoning designation. Following amendment of the Comprehensive Plan Map, the plan designation for the subject property would be “Forest-Farm.” The zone designation, “Forest-Farm,” with a minimum lot size of ten acres, (F-F (10)) is a zone that conforms with the proposed plan designation.

*2. The site is suitable to the proposed zone;*

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan’s “Definitions—Existing Land Use Map” identifies the subject property as: “Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year.” Page 232 of the plan lists “Purpose Definitions of Map Classifications on the Comprehensive Plan Map.” The existing plan classification, “Forest,” states: “Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield.” In this section, the Forest-Farm zone purpose is stated as “To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge.”

The proposed zone would allow farm and forest uses (permitted outright) and dwellings (conditional use permit) and land divisions down to ten acres. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

*“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”*

**APPROVAL FINDING:** The Forest-Farm zone is not a resource zone. In this case, it is the most suitable designation for the subject property, which has been partially built and entirely committed to non-resource use due to its location in close proximity to a major county rural residential area, and on site existing residential uses including a single family dwelling, an unused historic dwelling, and associated outbuildings. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

The history of the area is also relevant to addressing this standard. The extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of those surrounding areas to non-resource, rural residential uses. On-going development of residences south of Sevenmile Hill and Dry Creek Road has diminished the value of those roads as a firebreak for commercial timberlands to the south. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable. The subject property is less suitable for commercial forestry than the forestland south of the subject property. The subject property is better used as a buffer between low-density rural residential uses to the north, and commercial forestry uses to the south. The most appropriate design for that buffer is: 1) allow limited housing opportunities in relatively close proximity to existing roads and development and 2) promote clustering of housing generally away from commercial forest areas allowing remaining open areas to be used for small or large scale commercial forest activities, wildlife habitat and as a buffer for those activities. The subject parcel is suitable to the proposed zone as required by Criterion.B.2.

**DENIAL FINDING:** The Forest-Farm zone is not a resource zone. A change to this zone could decrease its potential to be used as part of a commercial agriculture or timber production operation. Both uses exist in the area to the south. Additionally, the soils on this parcel are all Class 4 which, as discussed above, is capable of providing for commercial timber uses. The Green Sheets have a category for "Woodland suitability" where it addresses growth. For the two soil types on the subject property, both are listed at "4A", where 4 is the number of cubic meters/hectare/year, and A is "slight or no limitation". Four cubic meters/hectare/year is equal to 57.2 cubic feet/acre/year. This significantly exceeds the Comprehensive Plan designation that calls for those lands devoted to Forestry Uses to exceed 20 cubic feet per acre per year. The Comprehensive Plan Definition of the purpose of the Forest Farm zone makes it clear that the intent was to limit that zone designation to Class 6 or 7 soils, which are not on the subject parcel at all. Additionally, there are concerns of lowering water supply and general fire risk in this area, as discussed throughout this report. A change to a zone allowing increased density in this area would have a negative impact on both factors. This site does not appear to be suitable to the proposed zone.

3. *There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations."*

**FINDING:** This application is for a goal exception and zone change from F-2 to F-F. The effective result of an approval would be a maximum of three additional single family dwellings, if this land was divided and developed. The TLSA study investigated the suitability of the area for residential needs, including "the availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area," all important factors to consider in this area when it comes to public welfare. The proposal is designed to provide an appropriate buffer between low-density rural residential, forest and farm uses on the one hand (to the north, east and west), and commercial forestry uses on the other (to the south). The "specific zoning" includes the Forest-Farm zone with a ten acre minimum lot size, clustering to a density not to exceed one dwelling for every ten acres. The potential three new dwellings would be required to comply with the fire safety standards for

development set out in Chapter 10 of the Wasco County LUDO, as well as any other applicable requirements of law pertaining to health, safety, and welfare, such as building codes or public health requirements. The exhibits and record of this proceeding support a finding of compliance with this requirement.

However, any addition of new residences increases fire risk due to human activity. Seven Mile Hill Road makes an excellent fire buffer, and almost all of the rural residential development in the area is to the north of it. Currently there are other residential developments south of the road to both the east and west of the Subject Parcel, but their existence does not justify approving even more risk in this area. Seven Mile Hill should remain as a buffer for fire in this area. Additionally, there has been an identified risk to ground water in the area as the water table has been gradually lowering in recent years, according to Robert Wood, Watermaster. Three additional residences and their wells would further accelerate that loss. Due to these two main concerns related to public safety and welfare in this area, this request should be denied.

#### *Section 9.030 - Transportation Planning Rule Compliance*

*A. Review of Applications for Effect on Transportation Facilities - A proposed zone change or land use regulation change, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). “Significant” means the proposal would:*

- 1. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
- 2. Change standards implementing a functional classification system; or*
- 3. As measured at the end of the planning period identified in the adopted transportation system plan:*
  - a. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
  - b. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
  - c. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new single family dwellings. As discussed above in the Background section, the Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7)):

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use Code 210). The zone change could potentially add three dwellings to the area's traffic load, producing about 29 new ADT at maximum build-out. The 2009 TSP predicted an ADT of 600 by 2030 with a Volume/Capacity (V/C) ratio of 0.03 for State Road (at Sevenmile Hill Road). Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the County used the OHP mobility standard of 0.70 as a comparison figure. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of three dwellings would not cause the V/C ratio to rise above 0.70. The TSP predicted that it would only hit 0.03 by 203 at 600 ADT, so even if it was 629 ADT at that time, that would not approach 0.70. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

*B. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new dwellings. The expected maximum increase in impact on the adjacent road, Seven Mile hill, would not meet the requirements stated in Criterion A. to qualify as "Significantly affecting" that transportation facility. Staff finds that Criterion B. is not applicable.

*C. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a zone change application pursuant to Section 4.140 Traffic Impact Analysis (TIA))*

**FINDING:** The proposal is to change the zoning for one 40.6 acre parcel from F-2 (80) to F-F (10), potentially resulting in a maximum of three new dwellings. At an average of 9.57 Average Daily Trips (ADT) per dwelling for a potential total of 29 new ADT, the impact from this proposal would not result in any change of functional class or allow land uses inconsistent with the current functional class of Seven Mile Hill/State Road. Staff finds that a separate Traffic Impact Analysis is not required because there would not be a "significant impact" under OAR 660-12-0060, the Transportation Planning Rule (TPR).

*Section 9.040 - Conditions Relative to the Approval of a Zone Change Reasonable conditions may be imposed, pursuant to Section 2.110(D) as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance. Such conditions may include, but are not limited to, the following:*

- A. Special yards and spaces;*
- B. Fences and walls;*
- C. Special parking and/or loading provisions;*
- D. Street dedication and improvements or bonds in lieu of improvements;*
- E. Control of points of vehicular ingress and egress;*

*F. Special provisions for signs;*

*G. Lighting, landscaping and maintenance of grounds;*

*H. Control of noise, vibration, odors, or other similar nuisances.*

**FINDING:** The application is for a Comprehensive Plan Amendment, Goal Exception and Zone Change for one 40.6 acre parcel from F-2 to F-F (10) zoning. The result of an approval would be a property that could be divided into four ten acre parcels, and the possible addition of a maximum of three additional dwellings. No structures are associated with this request. Since dwellings in the F-F (10) zone are Conditional Use Permits, any future requests involving a partition and additional structures will be examined to ensure these conditions are met. For the current application staff finds that no additional conditions are required to ensure compatibility with surrounding uses.

*Section 9.050 - Amendments to the Zoning Ordinance*

*Amendments to this Ordinance may be initiated as follows:*

*A. By resolution of the County Governing Body referring a proposed amendment to the Planning Commission for its consideration, report and recommendations;*

*B. By a majority vote of the Planning Commission confirmed by the Wasco County Governing Body;*

*C. By request of the Director of Planning or the District Attorney to conform the Ordinance to changes in the State Law;*

**FINDING:** The application is for a Comprehensive Plan Amendment, Goal Exception and Zone Change. It is not an application for an amendment to the Zoning Ordinance. Staff finds that Section 9.050 is not applicable.

*Section 9.060 - Recommendation on Zone Change or Amendment to the Land Use and Development Ordinance*

*After hearing, the Approving Authority shall recommend that the proposed zone change or amendment to the Zoning Ordinance be granted or denied. The Director of Planning or his assistants shall reduce to writing the Commission's recommendations together with a brief statement of the facts and reasons upon which such recommendation is based.*

**FINDING:** Staff is aware of this Criterion and intends to comply.

*Section 9.070 - Notice of Planning Commission Recommendation*

*Within ten (10) days of the final Planning Commission hearing, the Director of Planning or his assistants shall give notice thereof to any persons who signed in and testified at the hearing and to such other persons as may have requested the same in writing.*

**FINDING:** Staff is aware of this Criterion and intends to comply.

*Section 9.080 - Action by County Governing Body*

*Upon receipt of the Commission report, the County Governing Body shall take such action as may appear appropriate to that body, or as it feels the public interest requires, provided that in no event shall the County Governing Body act until at least twenty (20) days after the Notice of Planning Commission Recommendation has been mailed.*

**FINDING:** This Criterion will be met.

## **Acknowledgements**

The TLSA Project involved a Steering Committee (SC) and Technical Advisory Committee (TAC) who guided the planning process and were integral to selection of alternatives. Members included the following:

### **Steering Committee**

- Sandee Burbank (Planning Commission representative)
- Sheila Dooley (Citizens Advisory Group representative)
- Bruce Lumper (Bill Creek resident)
- Jim Wilcox (Board of Realtors)
- Jennifer Ringlbauer (Seven Mile Hill resident)
- Matthew Koerner (Mosier City Council)
- Wayne Huskey (Timber owner/Husky Ridge/South Mosier)
- Ron Nelson (Cherry Heights resident)
- Bill Reeves (Agricultural representative/Mosier Rural Fire District).

### **Technical Advisory Committee**

- Dusty Eddy, District Conservationist, Soil Conservation Service
- Ron Graves, Manager, Soil and Water Conservation District
- Jim Bishop, County Executive Director, Agricultural Stabilization and Conservation Service
- Lynn Long, Extension Agent, Wasco County Extension Office
- Jim Torland, Oregon Department of Fish and Wildlife
- Keith Kohl, Oregon Department of Fish and Wildlife
- Larry Hoffman, Unit Forester, Oregon Department of Forestry
- Ken Polehn, President, Wasco County Farm Bureau
- Larry Toll, Wasco County Watermaster
- Jodi Calica, General Manager, Natural Resources Department, Confederated Tribes of the Warm Springs
- Dan Boldt, Director, Wasco County Public Works Department
- Gay and Mac Jervey, Geological Consulting.

Key County staff from the Planning and Economic Development Office involved in the TLSA Project included:

- Karen Mirande, Associate Planner
- Dotty DeVaney, Associate Planner
- Kim Jacobsen, Former Director.

In addition, Gay Jervey, a TAC participant, volunteered her time to prepare extensive groundwater analysis for the TLSA Project. This analysis was integral to completion of the study and Wasco County is extremely grateful for her generosity and dedication.

## **1.0 LOCATION AND PURPOSE**

### **1.1 Location**

#### ***Which County lands are involved in the study area?***

The Wasco County Transition Lands Study Area (TLSA) Project encompasses approximately 24,000 acres of land located in unincorporated Wasco County, Oregon, between the cities of The Dalles and Mosier, and south of the Columbia River Gorge National Scenic Area (Figure 1). The study area includes all or part of the following sections:

Township 1 North, Range 12 East, Sections 1, 2, 10 through 15, and 22 through 24;  
Township 1 North, Range 13 East, Sections 6, 7, and 19;  
Township 2 North, Range 11 East, Sections 12 through 14, and 22 through 27;  
Township 2 North, Range 12 East, Sections 7, 8, 13 through 23, and 25 through 36; and  
Township 2 North, Range 13 East, Section 31.

The study area was divided into two broad areas: 13,500 acres (about 56% of the Study Area) currently zoned Forest or Exclusive Farm Use (EFU) orchard, and 10,500 acres (about 44% of the Study Area) currently in mixed zoning for residential and resource use (Figure 2). The 10,500-acre area includes two distinct parts: the Seven Mile Hill Area in the north-central part of the Study Area, and the Mill Creek/Cherry Heights Area in the southeastern part of the Study Area. The primary focus of the Steering Committee was on looking at development issues for the 10,500-acre mixed residential and resource use portion of the study area.

### **1.2 Purpose**

#### ***What is the purpose of the process and this document?***

This document discusses analysis methods and results of the TLSA Project. The TLSA Project was initiated in 1993 in response to concerns of the Wasco County planning commission, elected officials, and members of the community about development in northern Wasco County, particularly in the Seven Mile Hill Area. Concerns stemmed, in part, from availability of groundwater to serve domestic needs, fire hazard, conflicts with wildlife, and available lands for rural residential lifestyles in this developing area.

In 1993, the Wasco County Budget Committee appropriated funds to conduct a water study of Study Area lands (referred to as "Phase 1" in this document). In 1996, additional funds were appropriated to continue the Study Area project (referred to as "Phase 2" in this document). The following purposes guided the Phase 2 analysis process:

- Study the appropriateness of current zoning within the study area in response to recurring concerns with development patterns and potential resource conflicts.
- Establish a factual database incorporating information gained from local experts and the public at large during the course of public meetings and workshops.
- Establish best land use practices within the study area using the best available information.

Location of the Wasco County Transition Lands Study Area, Oregon.

INCORPORATED

- Build a citizen-based monitoring program allowing local residents to track impacts of land use decisions on such factors as groundwater availability, wildlife, and infrastructure, and provide updated information in a bi-annual review process.

Outcomes of the project were to be consistent with the Oregon Revised Statutes and Statewide Planning Goals, satisfy State Periodic Review requirements, and address integration recommendations on potential implementation of House Bill 3661 (forest template test or lot-of-record provisions in the forest zone).

The product of this planning effort is this Land Use Alternatives Study, which builds on information gathered throughout the TLSA Project and makes policy recommendations for integrating future development with resource protection within the Study Area.

## 2.0 POLICY RECOMMENDATIONS AND ACTION ITEMS

*What plan does the Steering Committee recommend?*

*What should be done to implement the recommendation?*

The nine key policy recommendations are as follows:

1. Proceed with caution -- change should be introduced gradually while monitoring programs are established to develop a better understanding of resource carrying capacities.
2. Preserve the rural lifestyle and quality of life in the 10,500-acre portion of the study area currently in mixed residential and resource zones and uses.
3. Protect the resource values in the 13,500-acre portion of the study area zoned A-1, in orchard use, and zoned F-2, in forest production.
4. Educate existing and future residents of the study area about the demands, risks, and responsibilities that are part of rural living.
5. Protect the existing number of development options provided under existing zoning -- no down zoning is recommended.
6. Limit or control the increase in potential numbers of home sites in the study area - no, or very little, immediate up zoning is recommended. (Currently, 301 out of the total of 799 allowed by zoning have been developed.)
7. Focus growth into the Browns Creek/Cherry Heights corridor -- a combination of regulatory up zoning and incentive based tools (transfer of development rights) would be used.
8. A local land trust should be created or an existing qualified entity should seek to identify, purchase, and protect significant open spaces and oak woodlands within the study area.

9. Review the effectiveness of the plan -- a bi-annual audit of the program should be held for consideration of new information including, but not limited to: infrastructure development, growth and build-out rates, impacts on resources such as water and wildlife, successes or failures of siting standards, and progress of private local preservation efforts.

Recommended action items include:

- Planning staff will draft required ordinance and comprehensive plan amendments to implement the recommended land use plan (Figure 3), new R-R(10) zoning, and siting standards addressing roads, fire, scenic, and habitat issues (see TLSA Development Standards in Appendix 1). These ordinance amendments are not proposed to include implementation of the HB 3661 forest template test or lot-of-record provisions in the Forest zone.
- Educational materials will be prepared and made available to the public. These materials will be modeled closely after those used in Larimer County, Colorado in its "Code of the West: The Realities of Rural Living" (see copy of code in Appendix 1). Wasco County will add simplified discussions of septic system maintenance, well maintenance and monitoring, conservation of backyard wildlife and oak woodland values, and water conservation measures.
- A local water monitoring program will be developed and implemented (see Local Water Monitoring Program in Appendix 1).
- Audubon Society will coordinate an Oak Woodland Research Committee that will focus on the identification and monitoring of impacts on oak woodland habitat in the study area and the providing of educational materials.
- Interest in the creation of a local land trust will be gauged. If sufficient interest exists, an organization will be formed to seek permanent protection of valuable open areas and oak woodlands in the Study Area (see Land Trust Proposal in Appendix 1).

### 3.0 PUBLIC PROCESS AND GOALS

#### *What did the Steering Committee want to accomplish?*

The policy statements and recommended land use plan were developed in response to a set of common goals established by the TLSA Steering Committee (SC) based on input from the Technical Advisory Committee (TAC).

Because the study was initiated in response to concerns about development and resource protection expressed by members of the community, obtaining their input and addressing their concerns was considered essential for success of the planning effort. Input was sought from public officials and private citizens, many of whom live in the Study Area. The Steering Committee and Technical Advisory Committee were reconvened to continue their work on Phase 2 of the TLSA Project. Meetings of the Steering Committee and Technical Advisory Committee were held, usually monthly, throughout the project. Background information from Phase 1 of the study, including mapped data and hydrogeologic reports, were used extensively in Phase 2 as a basis for analysis.

One task of the Steering Committee was to establish goals for the TLSA Project, which would guide the planning process and its outcomes. Goals, as established by the Steering Committee, are included in the following sections.

### **3.1 Resource-related Goals**

#### **3.1.1 Forest**

1. Protect commercial/industrial forest land in large tracts.
2. Protect and maintain opportunities for wood lot production on smaller parcels.
3. Provide for recreational opportunities where [this] does not pose a threat to accepted forest practices.
4. Buffer commercial/industrial forest land from conflicts with residential use.
5. Protect private property rights of the commercial/industrial forester.

#### **3.1.2 Agriculture**

1. Leave all commercial farm land under the protection of the recently revised agricultural ordinances.
2. Protect and maintain opportunities for small scale farming on moderately sized parcels (right to farm).
3. Buffer commercial farmland from conflicts with residential use.
4. Protect the rights of small scale farmers to accepted farming practices.

#### **3.1.3 Wildlife**

1. Avoid increasing conflicts between potential development and big game where possible.
2. Maintain diversity of wildlife, and provide means for animals to get from one place to another.

### **3.2 Development-related Goals**

#### **3.2.1 Water**

1. Use the best available observations and information about water in the study area as one of many factors considered, rather than the primary driving or limiting factor, in adjusting residential densities.
2. Identify areas suitable for development that support an increase, but do not exceed appropriate density, of wells.
3. Develop a long-term plan for assessing the behavior of domestic wells (using a representative sample) in each aquifer unit.

#### **3.2.2 Fire**

1. Ensure adequate protection of forest resources.
  - Maintain limits to uses posing potential fire risk in or near commercial forest land.
  - Apply strict fire standards and require development to be in a fire district, as required by state statute in the Forest Zone, to enable domestic fires to be contained.

2. Ensure adequate protection of existing and potential residential development.
  - Apply fire standards in accordance with Oregon Department of Forestry recommendations.
  - Consider setbacks from ridge tops based on recommendations of Mid-Columbia Fire and Rescue and Mosier Rural Fire Protection District.
  - Focus residential development within fire districts.
  - Consider increasing densities where fire response times are shortest.
3. Ensure adequate protection of agricultural resources.
  - Review agricultural fire standards and consider making recommendation to Agriculture Resource Group (ARG) if changes are warranted.

### **3.2.3 Access/Roads**

1. Ensure "safe and sane" access to residential areas.
2. Identify main routes with additional carrying capacity and use them to greatest extent possible to provide access to new development.
3. Do not increase densities or development potential without providing means of ensuring that adequate access is both constructed and maintained.
4. Identify new public and private road development needed to access potential new development areas.

### **3.2.4 Housing**

1. Provide rural residential housing opportunities outside the National Scenic Area (NSA) and Resource Zones - Evaluate suitability of land and carrying capacity relative to current zoning.
  - Consider rezone of F-F (10) to R-R (10) where dwellings can be permitted subject to standards rather than conditionally.
  - Evaluate portions of F-F (10) zone for ability to accommodate increased density.
  - Explore feasibility of limited rezone of non-productive F-2 lands.
2. Maintain rural character.
3. Retain open space values.
4. Protect scenic views/scenic quality.

## **4.0 INVENTORY PROCESS**

### ***What facts were considered by the Steering Committee in making their recommendation?***

Data was collected and evaluated with the project goals in mind. Alternative land use plans were developed and evaluated for compliance with the project goals.

From the outset of the TLSA Project's Phase 2, three factors were clear:

- Substantial information about the physical environment of the Study Area existed as an outcome of the first phase of study. Information included several study area maps in hard-copy and AutoCAD format, and the report entitled Hydrogeologic Investigation of the TLSA, prepared for Wasco County by Northwest Geological Services, Inc. in 1994 (see Appendix 4). This information needed to be organized,

evaluated, and in some cases, refined or supplemented so that it could be used in Phase 2 of the TLISA study.

- Additional factors relating to the suitability of the study area lands for development or resource uses needed to be addressed.
- The outcome of the project would need to rely on this information to establish best land use practices for the Study Area through a public planning process.

#### **4.1 Analysis Approach**

The overall analysis approach was designed to address the two primary concerns that prompted the study: development opportunity and resource protection. Substantial time in the early months of the study was dedicated to determining which factors constitute development opportunity or suitability, and which factors contribute to a need for resource protection. The outcome of this discussion was the development of a set of inventory maps that could be combined in various ways to build composite maps, which were used to develop land use alternatives for the Study Area. The inventory maps provided base data that were used in developing weighted suitability composite maps. The suitability composite maps addressed development values and resource values. The resulting maps included a weighted analysis of factors contributing to development suitability and resource suitability. The two composite maps--resource composite and development composite--were combined into a suitability analysis map to determine areas with high development value (high development suitability/low resource suitability) and high resource value (high resource suitability/low development suitability).

The flow diagrams (Figures 4 and 5a-d) provide conceptual depictions of the process, which is discussed in more detail in the following sections.

#### **4.2 Inventory Maps**

Inventory maps were developed, including the following:

- Fire Districts and Response Time
- County Road Capacity
- Zoning
- Parcels
- Developed Parcels
- Parcels by Size
- Potential Development (based on current zoning)
- Agriculture:       Historically Cropped Lands  
                          Existing Agriculture (Land in Production)  
                          Agricultural Soil Classes
- Forest Site Classes
- Big Game Winter Range
- Well Locations
- Aquifer Systems

### **4.3 Analysis Maps**

Analysis maps were derived by combining the inventory data into two categories: "development suitability" and "resource suitability." Components, by category, are listed below by category.

Development suitability included the following:

- Fire Districts and Response Time
- County Road Capacity
- Zoning
- Developed Parcels by Size
- Potential Build out by Zone
- Aquifer Systems

Forest and Agriculture resource suitability included the following:

- Agriculture: Existing Agriculture (Land in Production)  
Agricultural Soil Classes
- Forest Site Classes
- Big Game Winter Range
- Aquifer Systems

The presence of pine oak woodland habitat also was discussed at length as a resource suitability consideration. Definitive mapping of pine oak woodland habitat areas was not available for inclusion in the composite maps but will be developed for future consideration. Pine oak habitat values were addressed by the Steering Committee through public education and siting standards.

#### **4.3.1 Suitability Composite Maps**

The next step in the analysis was to determine how important each component was to determining the lands' suitability for development (Development Suitability Composite) and the lands' value as resource land (Forest and Agriculture Resource Suitability Composite). The weighting and combination of the components are discussed below.

#### **4.3.2 Development Suitability Composite**

Components of development suitability included:

- Located within the fire district;
- Accessible by a Class III or Class I road with 75% capacity remaining;
- Located within recognized impacted Big Game Winter Range; and
- Located within either a "green" or "yellow" aquifer system, which are aquifer systems having identified units within them generally supporting densities greater than or equal to existing zoning.

Points were assigned to each of these factors and the respective points were added to identify which parcels within the Study Area were most suitable for development. The weighted values given to each factor and the composite totals are shown in Figures 6 and 7; the highest possible value was 7 points.

#### **4.3.3 Forest and Agricultural Resource Suitability Composite**

Components of forest and agricultural resource suitability included:

- Located within forest site class 4-6, or located within agricultural soil class 1-2 or 3-6;
- Identified as existing agriculture or existing forest; and
- Located within designated Big Game Winter Range.

Points were assigned to each of these factors and the respective points were added to identify which parcels within the Study Area were most suitable for forest and agricultural resources. The weighted values given to each factor and the composite totals are shown in Figure 8; the highest possible value was 6 points.

#### **4.3.4 Potential Development**

A set of maps was also produced to identify development potential (how many houses could be built) within the existing zoning districts in the Study Area. These maps included:

- Potential Development AG-1 (20) and (80) Zones
- Potential Development F-F (10) Zone
- Potential Development R-R (5) Zone
- Potential Development F-2 (80) Zone

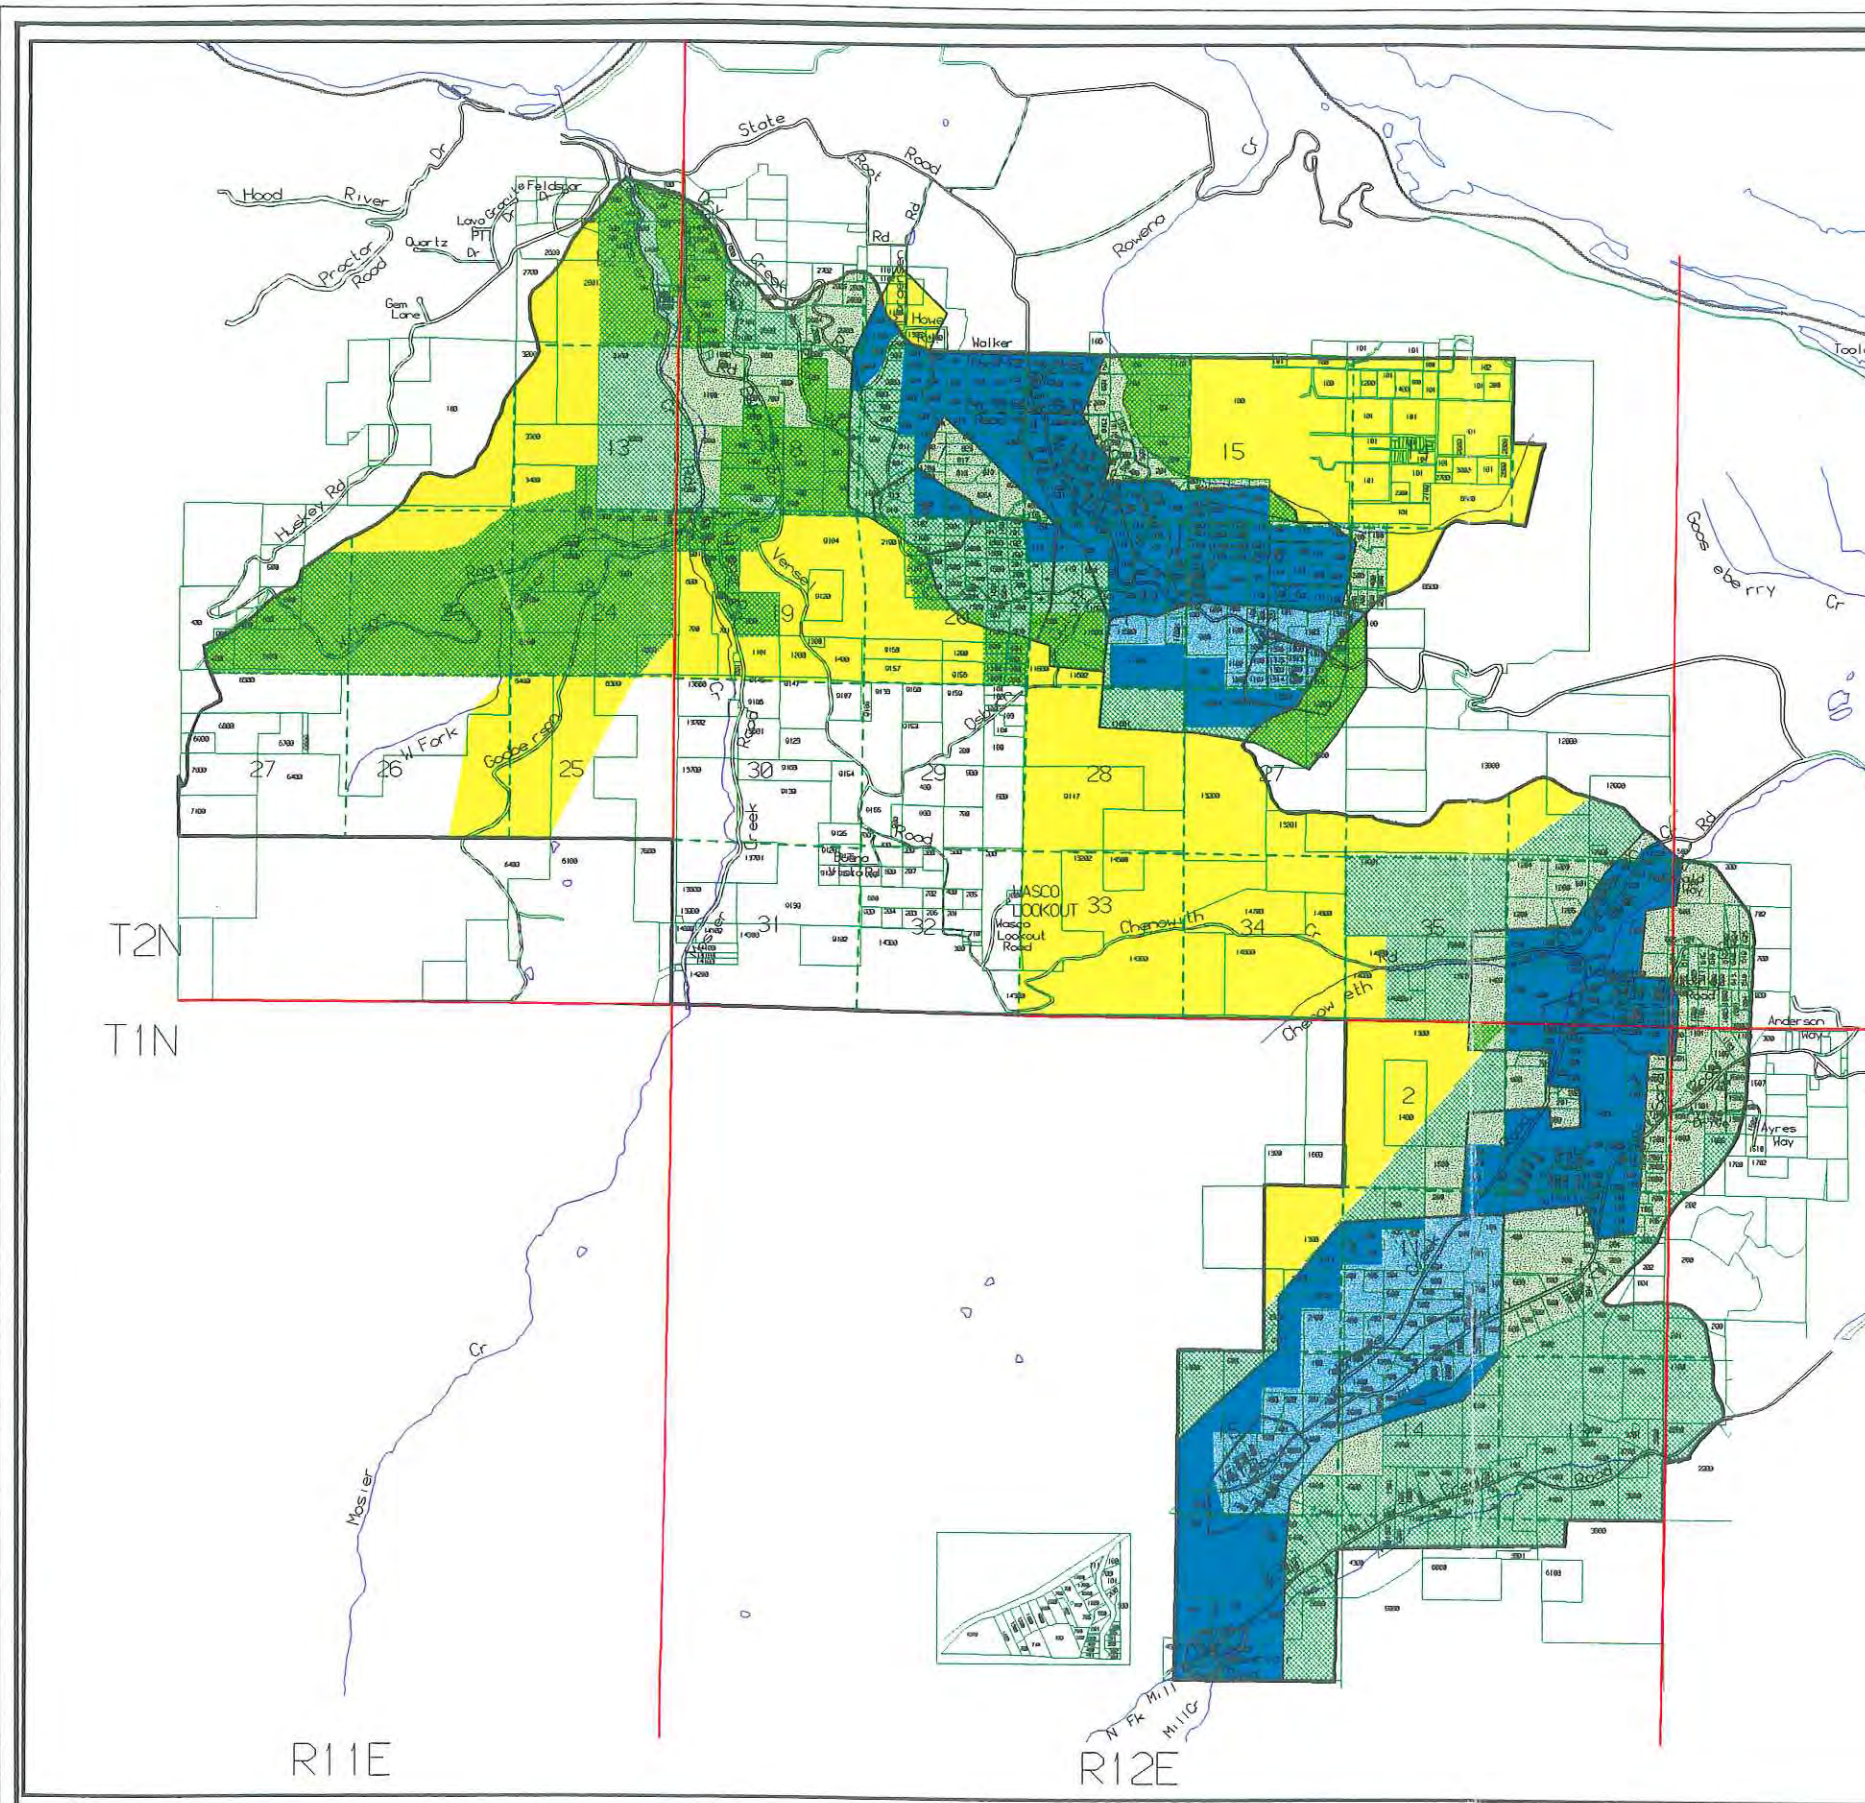

These maps indicated the total number of parcels per section that would be available for development based on the existing zoning classification. Based on this information, it was possible to identify total potential development that would be possible within the Seven Mile Hill Area and the Mill Creek/Cherry Heights Area (Figure 9). Although this information was not used to produce the combined weighted compositions map described in Section 4.4 below, it provided a frame of reference for evaluating impacts of zone changes while exploring Policy Alternatives.

#### **4.4 Combined Suitability Composite**

The next step in analysis was to combine the Development Suitability map with the Forest and Agricultural Resource Suitability map to identify which parts of the Study Area were most appropriate for development and which were most appropriate for resources use/protection. This was accomplished by developing a matrix of development versus natural resources values, as shown in Figure 10. The matrix identifies the conflicts between the suitability maps. For example, if an area had a resource value of 5 and a development value of 2, it was classified H-L (High-Low) within the matrix. Based on the matrix and the map combining the Development Suitability and Resource Suitability maps in Figure 11, lands within the Study Area were categorized as follows:

- Low development value/Low resource value (L-L)--No conflict; these lands will experience little pressure either for development or resource use/protection.

# EXISTING DEVELOPMENT AND POTENTIAL DEVELOPMENT SUMMARY

	7 Mile Hill	Mill Creek - Cherry Heights	Totals
Existing Development	114	187	301
Potential Development	185	313	498
Cluster Provison Bonus Density Increase (Add to potential)			
Potential Increase at 25% Bonus	1	50	
Potential Increase at 50% Bonus	11	102	

Development is defined as dwellings.

Potential development numbers are based on what would be allowed under the current zoning in the FF-10, RR-5, and Agricultural Zones only. Numbers do not take into account unbuildable lots based on topography.

## Potential development by zones

7 Mile Hill		Mill Creek-Cherry Heights	
FF-10	= 125	FF-10	= 256
RR-5	= 52	RR-5	= 50
Ag	= 8	Ag	= 7

## Example of how to figure a cluster bonus.

a 40 acre parcel in the FF-10 would get 4 houses( 1 per each 10 acres). With a cluster provision, the same parcel would get 1 extra dwelling at 25% bonus (4 dwellings x .25); or 2 extra dwellings ( 4 dwellings x .50).

- High resource value/Low development value (H-L)--plans for these lands should protect the resource.
- Low resource value/High development value (L-H)--plans for these lands could accommodate development.
- Medium resource value/Medium development value (M-M)--Potential conflict; lands in this category must be reviewed in context to determine which factor (development or resource use/protection) is more important to plan for.
- High resource value/High development value (H-H)--plans for these lands must also be reviewed in context. Land uses must be based on review of applicable statutes, which usually will favor the resource, but there may be exceptions.

## 5.0 PRELIMINARY DEVELOPMENT ALTERNATIVES

### *What was the full range of alternatives considered?*

Three preliminary alternatives were developed based on the development and resource value analysis. These include: Alternative 1--Minimum Development, Alternative 2--Moderate Development, and Alternative 3--Maximum Development (Figures 12, 13, and 14). The alternatives reflect the range of development that could occur in the Study Area, from essentially "status quo" to substantial increases in allowed density. The alternatives are described below, accompanied by a discussion of the positive and negative aspects of each.

As noted earlier in this report (see Section 2.0), two areas were identified as most suitable for development based on the Development Suitability Maps: the Seven Mile Hill Area, in the northeastern part of the Study Area, and the Mill Creek/Cherry Heights Area, in the southeastern part of the Study Area. The preliminary alternatives focus on these areas.

### 5.1 Alternative 1--Minimum Development

This alternative represents the "status quo," allowing very little increase in development density above what was already allowed by current zoning. A key factor recognized by the Steering Committee was that the potential exists for approximately 500 additional homes to be built under the current zoning, in addition to the existing approximately 300 homes. Water Monitoring Areas were designated as areas which could experience increased densities in the future if adequate water is available (Figure 12).

#### 5.1.1 Seven Mile Hill Area

In the Seven Mile Hill Area, Alternative 1 would:

- Retain the existing A-1 (80) EFU and R-R (5) Rural Residential, and the vast majority of the F-2(80) zoning.
- Rezone the remainder of the area from F-F (10) Forest-Farm and a small amount of F-2 (80) Forest to R-R (10) Rural Residential, a new zone created as a result of this study.
- Rezone one area of F-2(80), approximately 80-100 acres located in the southeast corner of the Seven Mile Hill Area, to R-R(10).

# ALTERNATIVE FOR MINIMUM DEVELOPMENT

(Same zoning w/ minor changes)

-  ALL EXISTING FF10 TO RR-10
-  WATER MONITORING AREAS FOR POTENTIAL INCREASE IN DENSITY (areas where current density spacing is working, other areas will be monitored, but not being counted for density increases)
-  PROPOSED MINOR INCLUSIONS OF RESOURCE LAND TO RR-10 (RES)

## MINIMUM DEVELOPMENT

### PROS:

- Rezone only very limited resource zoned lands with low resource values, retaining areas of higher resource value.
- Retain existing ten acre minimum.
- No increase in potential impacts on BGWR.
- Allows further testing and monitoring of aquifer systems prior to any increase in density - "we'll never be able to promise water but may understand the odds better."
- Doesn't increase potential service needs (roads and fire protection).
- Retains familiar 10 acre land use pattern.

### CONS:

- Without development standards and education for rural occupants, still impacts fire protection, rural character and "other" wildlife habitat as ten acre densities developed.
- No increase in potential \$'s for rural fire protection.
- Monitoring still important to provide understanding of water issues to rural dwellers.
- Fails to provide a smaller lot option for rural dwellers - each rural residence "consumes" a minimum of ten acres.

Wasco County Transition Lands Study Area  
Alternative 1 - Minimum Development

FIGURE  
12

# ALTERNATIVE FOR MODERATE DEVELOPMENT

## Legend

 IDENTIFIED AREAS FOR FUTURE INCREASED DENSITY w/ FUTURE WATER MONITORING DATA SUPPORT

### MODERATE DEVELOPMENT

#### PROS:

- Accommodates limited increased densities in areas of low or lower resource value.
- Directs limited density increases to areas with low or lower resource value.
- Accommodates limited increased densities in impacted areas of BGWR.
- Increases densities where aquifer systems are behaving more predictably.
- Identifies areas for additional increased densities once more is known about water.
- Focuses limited density increases in serviceable areas.
- Provides for a limited increase in fire district revenues.
- Accommodates increased densities accessed by a single road system at first- allowing the Road Department to assess impacts.
- Allows opportunity to assess effectiveness of development standards, for maintaining fire / road access and preserving rural character, and educational programs increasing awareness of water, wildlife and right to farm issues prior to further increase in densities.
- Provides limited accommodations for rural housing.

#### CONS:

- Limited impacts on other wildlife habitat.
- No guarantees as to water availability at higher densities.
- Limited increases in risk of fire loss in less accessible areas.
- Limited increase in traffic on roads with no automatic increase in Rd. Department revenue.
- Impacts on rural character in limited areas.

Map from Wasco County, OR, 1997

Wasco County Transition Lands Study Area  
Alternative 2 - Moderate Development

7961032 9/12/97

FIGURE  
13

# ALTERNATIVE FOR MAXIMUM DEVELOPMENT

PROS

## MAXIMUM DEVELOPMENT

- PROS:**
- Maximizes development in areas of low or lower resource value - taking pressure off higher value lands.
  - Maximizes development in impacted areas of big game winter range (BGWR)- taking pressure off areas with remaining habitat values.
  - Not limited by possible ground water shortages - water can be purchased or hauled if needed.
  - Allows all serviceable (roads and fire district) land to be developed fully- taking pressure off areas with substandard services.
  - Allows broad increase in densities with in fire districts- increasing revenues within the same service area.
  - Maximum accommodations for rural housing- could consider cluster density bonuses at even higher than five acres.
  - Broad comprehensive density increases provide for more consistent development pattern rather than infill after ten acre lot pattern has continued to develop.

- CONS:**
- Impacts other wildlife habitat- quantifiable data not available.
  - Possible over extension of ground water supplies and increased densities in areas where aquifer system behavior is not well understood.
  - Hauling water to domestic dwellings is not the usual and customary practice in this area - can't form water districts or co-ops outside UGB.
  - Without adequate Road standards increases risks of fire loss in less accessible areas (increased structure values and more lives affected).
  - Without LIDs (limited improvement districts) or Development Fees, no increased revenues for Road Department to provide for additional development and maintenance as traffic increased.
  - Impacts on rural character.
  - Provides no trial run for development standards and education programs.

Map from Wasco County, OR, 1997

Wasco County Transition Lands Study Area  
Alternative 3- Maximum Development

7961032 9/12/97

FIGURE  
14

- Create and coordinate a water monitoring program tied to specific Water Monitoring Areas.

Creation and application of the R-R (10) zone would simplify the approval of homes by eliminating the conditional review process. Residential use would be permitted subject to standards for approval (see Appendix 1 for a summary of this new zone).

Water Monitoring Areas are areas that could be rezoned in the future to allow increased development, provided water monitoring indicates water availability would be able to accommodate increased density (water monitoring information is included in Appendix 6 of this report). Water Monitoring Areas were determined based on aquifer systems within the Study Area determined to be "green" or "yellow." A "green" aquifer system is one that, based on hydrographs and well records, shows no particular anomalies such as water level decline, deepenings, or deep static water level. A "yellow" aquifer system is one that, based on hydrographs and well records, has unexplained or negative anomalies including deeper than average aquifers, major and minor deepenings of wells, decreases in static water levels and/or has shallow soils.

### **5.1.2 Mill Creek/Cherry Heights Area**

In the Mill Creek/Cherry Heights Area, Alternative 1 would:

- Retain the existing R-R (5) Rural Residential zoning.
- Rezone the remainder of the area zoned F-F (10) to the new R-R (10) zone.
- Rezone two small segments zoned F-F(80) located along the western boundary of this area to R-R (10).
- Create and coordinate a water monitoring program aimed at Water Monitoring Areas identified over approximately one-half of the Mill Creek/Cherry Heights area.

### **5.1.3 Pros and Cons of Alternative 1--Minimum Development**

Pros include the following:

- Only a very limited area of resource-zoned (F-2 (80)) lands with low resource values would be rezoned to R-R (10), thus retaining areas of higher resource value in their existing zoning.
- The existing 10-acre minimum would be retained in rezoned areas.
- There would be no increase in potential impacts on the Big Game Winter Range (BGWR).
- Further testing and monitoring of aquifer systems would be undertaken before any increase in density is allowed. This will result in a better understanding, through monitoring and evaluation, of the aquifer systems and how they are affected by development.
- Potential service needs (i.e., for roads and fire protection) would not increase.
- The existing, and familiar, 10-acre land use pattern would be retained.

Cons include the following:

- Without development standards and public education about the impacts of increased density, impacts on fire protection services and wildlife habitat, and changes in the rural character of the area, would result.
- There would be no increase in potential revenue for rural fire protection services.
- Likely less incentive to monitor aquifers, however, monitoring of aquifers still would be important to provide understanding of water issues to rural dwellers.
- Fails to provide a smaller lot option; each rural residence would continue to "consume" a minimum of 10 acres of land.

## **5.2 Alternative 2--Moderate Development**

Alternative 2 would allow more development than with Alternative 1, with other areas in both the Seven Mile Hill Area and Mill Creek/Cherry Heights Area identified for a future increase in density if there is water monitoring data to support it. A much larger part of the Mill Creek/Cherry Heights Area (about half) would be rezoned to R-R (5) (Figure 13). This would allow more development than with Alternative 1.

### **5.2.1 Seven Mile Hill Area**

In the Seven Mile Hill Area, Alternative 2 would:

- Retain the existing A-1 (80) EFU and R-R (5) Rural Residential zoning.
- Rezone the remainder of the area, which currently is zoned for F-F (10) and F-2 (80), to R-R (10).
- Create a much larger water monitoring area than Alternative 1, which means it could be rezoned in the future to allow increased development, provided water monitoring indicates water availability.

### **5.2.2 Mill Creek/Cherry Heights Area**

In the Mill Creek/Cherry Heights Area, Alternative 2 would:

- Retain the existing R-R (5) zoning.
- Rezone existing F-F (10) in the northern part of the area to R-R (10), and designate about half a Water Monitoring Area.
- Rezone a small area of existing F-2 (80) in the southern part of this area to R-R (5).
- Rezone existing F-2 (80) and F-F (10) along the western boundary to R-R (10).

### **5.2.3 Pros and Cons of Alternative 2--Moderate Development**

Pros include the following:

- Limits increased densities.
- Directs increased densities to areas of low or lower resource value, areas where the Big Game Winter Range (BGWR) already is impacted, and/or areas where aquifer systems are behaving more predictably ("green areas").
- Areas are identified where density could increase once more is known about water availability (Water Monitoring Areas).

- Density increases are focused in serviceable areas.
- A limited opportunity for an increase in fire district revenues is provided.
- Increased densities are first directed to areas accessed by an existing road system with adequate capacity for increased traffic, allowing the Road Department to assess impacts of increased development on roads.
- The opportunity is provided to assess the effectiveness of development standards, for maintaining fire/road access and preserving rural character, and educational programs to increase awareness of water, wildlife, and right-to-farm issues, before increases in density occur.
- Limited accommodations for rural housing are provided.

Cons include the following:

- Limited impacts on other wildlife habitat would result.
- There is no guarantee that water will be available to accommodate higher densities.
- A limited increase in risk of fire loss would result in accessible areas.
- Traffic on roads would increase to a limited extent without an automatic increase in Road Department revenue to offset increased service demand.
- Rural character would be affected in certain areas to a limited extent.

### **5.3 Alternative 3--Maximum Development**

This alternative would rezone most of the Seven Mile Hill Area and the Mill Creek/Cherry Heights Area to R-R (5), thus allowing the most development of the three alternatives (Figure 14). This alternative does not consider water to be a limiting factor to development.

#### **5.3.1 Seven Mile Hill Area**

In the Seven Mile Hill Area, Alternative 3 would:

- Retain the existing A-1 (80) EFU and R-R (5) zoning.
- Rezone areas with medium-low development value and low resource value from F-F (10) to R-R(10).
- Rezone the remainder of the existing F-F (10) to R-R(5) without regard to water considerations.

#### **5.3.2 Mill Creek/Cherry Heights Area**

In the Mill Creek/Cherry Heights Area, Alternative 3 would:

- Retain the existing R-R (5) zoning.
- Rezone most areas in the northern half from F-F (10) to R-R (5); the exception would be a small area along the western boundary that has a medium-low development value and a low resource value, which would be rezoned to R-R (10).
- Rezone the southern half of the area to R-R (5), with a small part along the western boundary rezoned to R-R (10).

### 5.3.3 Pros and Cons of Alternative 3--Maximum Development

Pros include the following:

- Development is maximized in areas of low or lower resource value, thus taking development pressure off lands with higher resource value.
- Similarly, development is maximized in areas of impacted Big Game Winter Range, taking pressure off areas with remaining habitat values.
- Development would not be limited by possible groundwater shortages; water could be purchased or hauled if needed.
- All serviceable (roads and fire district) lands can be fully developed, which takes pressure off areas with substandard services.
- A broad increase in densities is allowed on lands within the fire districts, resulting in increased revenues within the same service area.
- There is maximum accommodation of rural housing; cluster density bonuses could be considered at greater than 5-acre minimum lot size.
- Broad comprehensive density increases proposed with this alternative provide for a more consistent development pattern, rather than resulting in infill after the 10-acre pattern has continued to develop.

Cons include the following:

- Although quantifiable data is not available, this alternative is expected to result in impacts on wildlife habitat.
- It is possible that over-extension of groundwater supplies will occur as a result of increased densities in areas where the behavior of aquifer systems is not well understood.
- Hauling of water for domestic use is not the usual and customary practice in the Study Area, and formation of water districts or co-ops outside the urban growth boundary (UGB) is not allowed; therefore, water availability could become a problem.
- Without adequate road standards, there would be increased risk of fire loss in less accessible areas, and likely increased structure damage and more lives affected as a result of increased density.
- Without local improvement districts (LIDs) or development fees, there would not be increased revenue for the Road Department to provide for additional development and maintenance as traffic increases.
- Impacts on rural character would result.
- A "trial run" for development standards and educational programs is not provided.

## 6.0 ALTERNATIVE PLANS

*What was the preferred preliminary alternative?*

*What options were considered for implementing the preferred alternative?*

Based on analysis and comparison of the Preliminary Development Alternatives (Section 5.1) and consideration of information derived from analysis of the Potential Development maps (as described in Section 4.3.3 of this report), the Steering Committee selected Alternative 1 – Minimum Development as their preferred alternative. The Steering Committee agreed to look at some options for development within the context of the

Minimum Development Alternative. Three Preferred Policy Alternatives were developed. The Preferred Policy Alternatives focus on the same mixed residential and resource use areas of the Study Area as the Preliminary Development Alternatives: the Seven Mile Hill Area and the Mill Creek/Cherry Heights Area. These alternatives were refinements of the Minimum Development Alternative, and were guided and developed from the policy statements. They explored three different approaches to developing the Minimum Development Alternative, as follows:

- (1) Maintain the existing number of homes that can be developed by current zoning, but provide flexibility of lot size through transfer of development rights.
- (2) Identify specific areas for immediate upzone (increased density), but significantly limit these areas.
- (3) Identify specific areas for an upzone in the future, as warranted.

The Preferred Alternative plans combine features of each of the Preliminary Development Alternatives. Each approach aims to:

- Proceed with caution;
- Focus growth in the Mill Creek/Cherry Heights area; and
- Retain rural character and quality of life.

The plans also include a new concept--transfer of development rights (TDR)--to allow a transfer of a development (house) to another location. The alternative concepts are explained in detail in the following sections.

## **6.1 Transfer of Development Rights (TDR) Alternative**

The Transfer of Development Rights Alternative transfers development rights from areas with high resource values and/or lower development values to areas with high development potential. This approach could result in higher protection for resource lands while allowing some flexibility for development (Figures 15 and 16). Areas most suitable for development will be allowed to build out at higher densities than allowed under current zoning. They would be allowed to increase their density by purchasing a development right (unbuilt homesite) from another property owner and agreeing to develop the "transferred" homesite within the receiving area where development suitability is highest. The key is that increased densities allow for infill development where best suited, and make possible the utilization of development rights from areas that are less suitable for development, which may include areas of steep slopes, ridgelines, aquifer anomalies, significant wildlife habitat, and/or locations compromising scenic views.

### **6.1.1 Seven Mile Hill Area**

In the Seven Mile Hill Area, the TDR Alternative would:

- Retain the existing R-R (5) and A-1 (80) EFU zoning.
- Retain the existing F-F (10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F (10) lands to R-R (10). None of the rezoned R-R (10) areas would be able to receive development rights under the TDR concept.

FIGURE  
16

### 6.1.2 Mill Creek/Cherry Heights Area

In the Mill Creek/Cherry Heights Area, the TDR Alternative would:

- Retain the areas with R-R (5) zoning.
- Retain a small area of F-F (10) and areas of F-2 (80) along the western area boundary.
- Rezone the remainder of lands currently zoned F-F (10) to R-R (10) with TDR receiving status.

### 6.1.3 Intent and Impacts of the TDR Alternative

#### *What is the intent of the TDR Alternative?*

- The overall density (number of new homes) would not increase, but would allow lot size flexibility.
- Development would occur at a slower pace, which allows time to explore ways to fund the cost of providing service to developing areas.
- Increased densities would occur in the most accessible areas, as driven by the market.
- An incentive is generated for private purchase of development rights.
- Those who pay (for transfer of development rights) are those who stand to benefit from increased development.
- Rural character would be maintained.
- Development would proceed with caution and allow time for water monitoring data to be compiled.

#### *What are the impacts of the TDR Alternative?*

- TDR is a new concept and will be difficult to understand and/or explain.
- There is no guarantee that development rights will be purchased and built out in the "receiving areas;" however, the alternative acknowledges the value of creating incentives, rather than regulating development through such methods as downzoning.
- TDR may be complex and difficult to implement because of higher administrative costs and staff time commitments.
- Creates higher densities in "receiving areas" than zoning would indicate.

### 6.2 Limited Upzone Alternative

The Limited Upzone Alternative identified areas that are best suited for an upzone based on development suitability (Figure 17). Generally, these are areas that have good road access, are in a fire district, are in an impacted Big Game Winter Range area, and are located in an aquifer that has few anomalies. There is not a transfer of development rights (TDR) in this alternative.

#### 6.2.1 Seven Mile Hill Area

In the Seven Mile Hill Area, the Limited Upzone Alternative would be the same as with the TDR Alternative, but there would not be the opportunity to transfer or sell development rights.

Map from Wasco County, OR, 1997

7961032 9/12/97

Wasco County Transition Lands Study Area  
Limited Upzone Alternative

FIGURE  
17

SRI/SHAPIRO/AGCO  
INCORPORATED

## **6.2.2 Mill Creek/Cherry Heights Area**

In the Mill Creek/Cherry Heights Area, the Limited Upzone Alternative would retain the existing F-F (10) areas that have a higher resource value (the same as Alternative 1). However, this scenario identifies two areas for an upzone from F-F (10) to R-R (5). These areas are identified as having a high development value and include the following:

- Area 1--south of the existing R-R (5). Rezoning this area to R-R (5) would result in approximately 39 additional homesites.
- Area 2--south of Lutz Lane. Rezoning this area to R-R (5) would result in approximately 22 additional homesites.

## **6.2.3 Intent and Impacts of the Limited Upzone Alternative**

### *What is the intent of the Limited Upzone Alternative?*

- Rural densities would increase in the most appropriate areas.
- Upzoning and downzoning are familiar concepts; therefore, the action would be easily understood by landowners.

### *What are the impacts of the Limited Upzone Alternative?*

- The number of potential homesites would increase by 60+, which would put more demand on infrastructure and services, such as the road system.
- It would be difficult to "go back" once areas are upzoned.

## **6.3 Future Expansion Alternative**

The Future Expansion Alternative identifies the same two areas for an upzone as are identified in the Limited Upzone Alternative (Figure 18). In this scenario the upzone of an area would be phased in as development pressure occurs in the future, and as more information on water is gathered. There is no difference between this alternative and the Limited Upzone Alternative other than the rezone areas are identified and reserved for future growth.

## **6.3.1 Intent and Impacts of the Future Expansion Alternative**

### *What is the intent of the Future Expansion Alternative?*

- Does not increase number of homesites above what current zoning allows at this time.
- Identifies those areas where development is most suitable for future growth.
- Has no immediate impacts.

### *What are the impacts of the Future Expansion Alternative?*

- The number of homesites would not increase at this time.
- As need for homesites increases, areas for future upzones have been identified.

## **7.0 FINAL RECOMMENDATION**

The final preferred alternative recommendation combines features of both the Transfer of Development Rights and the Limited Upzone (Figure 3). It identifies Area 1 for an immediate upzone from F-F (10) to R-R (5) and it identifies Area 2 as a test case area to receive Transfers of Development Rights.

### **7.1 Seven Mile Hill Area**

In the Seven Mile Hill Area the Final Recommendation would be:

- Retain the existing R-R (5) and A-1 (80) EFU zoning.
- Retain the existing F-F (10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F (10) lands to R-R (10). F-F (10) areas would be able to transfer development rights to the area identified as the test area (Figure 3).

### **7.2 Mill Creek/Cherry Heights Area**

In the Mill Creek/Cherry Heights Area the Final Recommendation would be:

- Retain the areas with R-R (5) zoning.
- Retain a small area of F-F (10) and areas of F-2 (80) along the western area boundary.
- Upzone Area 1 - south of the existing R-R (5) - from F-F (10) to R-R (5). Rezoning this area would result in approximately 39 additional homesites.
- Identify Area 2 - south of Lutz Lane, existing R-R (5) zone - as a test case receiving area for the Transfer of Development Rights.
- Rezone the remainder of lands currently zoned F-F (10) to R-R (10).

### **7.3 Intent and Impacts of the Final Recommendation**

#### ***What is the intent?***

- The overall density (number of new homes above current zoning) would increase by 39 and be directed in the most appropriate area.
- Transfer of Development Rights concept could be tested to determine its success.
- Rural character would be maintained.
- Development would proceed with caution, and allow time for water monitoring data to be completed.

#### ***What are the impacts of the limited Upzone Alternative?***

- The number of homesites would increase by 39 and provide some additional housing opportunities.
- There is no guarantee that development rights will be purchased and built out in the test area. However, it allows an opportunity to explore a new concept which creates incentives for development to occur in an appropriate place rather than regulating development through such methods as downzoning.
- Transfer of Development Rights densities in “receiving areas” at higher densities that zoning would indicate.

**EXHIBIT 2**

**Transition Lands Study Area**

**(Memo)**

## **MEMORANDUM**

**To:** Wasco County Court  
**From:** Planning Staff  
**Hearing Date:** Feb. 18, 1998  
**RE:** Staff summary of Issues for the Transition Lands Study Area (TLSA)

---

### **Background**

A nine member citizen based Steering Committee and a Technical Advisory Committee, comprised of local resource experts, was appointed by the County Court in Jan. 1994. The Steering Committee and Technical Advisory Committee met monthly from July 1996 through September 1997. The purpose of the Steering Committee was: 1. to be representatives for the community in response to concerns about development and resource protection 2. to assess the resources of the Transition Lands Study Area and establish a factual database for decision making and; 3. to assess the carrying capacity of the land.

The Steering Committee held a public informational meeting for public input on their recommendations. The Citizens Advisory Group and the Planning Commission held public hearings to consider the Steering Committee recommendations.

### **Purpose of the TLSA Study**

The TLSA study was initiated in 1993 in response to concerns of the Wasco County Planning Commission, elected officials, and members of the community about development in northern Wasco County, including the Seven Mile Hill and Browns Creek/Cherry Heights area. Concerns stemmed from availability of groundwater to serve domestic needs, fire hazards, conflicts with wildlife, and available lands for rural residential lifestyles in this developing area.

The product of this planning effort is a report, the 'Wasco County Transition Study Area, Sept. 12, 1997, which builds on information gathered throughout the TLSA project and makes policy recommendations for integrating future development with resource protection within the Study Area.

### **Summary of TLSA Steering Committee Recommendations:**

The Steering Committee recommendations and the process and methodology which guided their recommendations are documented on page two of the report. A vast amount of data was collected and evaluated with project goals in mind. The outcome of the project relied on this information to establish best land use practices for the Study Area through a public process. Attachment A 'Qwik Facts' provides an overview of key data considered by the Steering Committee.

There were five key recommendations made by the TLSA Steering Committee. The complete list of policy recommendations and action items are discussed more fully on page 2 and 3 of the TLSA study included in your packet.

## **EXHIBIT 2**

**Steering Committee Recommendations:**

- 1. Change a portion of the F-F(10), Farm-Forest zone to R-R(10) Rural Residential zone(a new zone).
- 2. Upzone approximately 200 acres of existing F-F(10) land to R-R(5) adjacent to existing R-R(5). The upzone is in an area where there is fire protection, adequate road capacity for additional traffic, and within an area which shows no groundwater anomalies. The upzone would add approximately 32 additional homes to the number of new homes allowed by current zoning.
- 3. Designate a " test" receiving area for the Transfer of Development Rights (TDR)  
Attachment B explains TDR's).
- 4. Implement development standards for fire, scenic, and roads within the new R-R(10).
- 5. Do not implement House Bill 3661 provisions for the Lot of Record or Template Test dwellings in the F-2, Commercial Forest zone.

**Action of the Citizens Advisory Group:**

A public hearing was set For November, 18, 1997. There was not a quorum of the members attending, therefore we could not hold a hearing to review the Steering Committee recommendations. Rather than try to reach a consensus, on the SC Recommendations, the CAG members voted on the five steering committee recommendation listed above Their votes are noted on the Attachment C

**Main Issues Discussed by the Planning Commission:**

Issue 1 - House Bill 3661 provisions for Lot of Record dwellings and Template Test dwellings in the F-2 Commercial Forest zone

The Steering Committee recommendation was not to implement either of the two provisions for dwellings in the F-2 zone. Their recommendation was based on inventory data showing this area as having a high resource value, and a low development value (due to lack of infrastructure).

What is the difference between the two provisions? The Lot of Record provision would allow dwellings to those landowners who have owned the land prior to 1985 and still own it. The Legislative intent for this provision was for fairness and equity to those landowners who may not have been aware of the state landuse laws adopted in 1974. The Template test for dwellings was based on available area wide information regarding overall landuse pattern, land values, and infrastructure within the area. Criteria in the Statue for applying the template test provision address the facilities and service capabilities of the area. These criteria would result in a denial of all applications based on the data resulting from the TLSA study. Specifically, the data showed a lack of road capacity and fire protection, that is, it exceed the facilities and service capabilities of the area.

Issue 2 - Implementing the Transfer of Development Rights test area, The Planning Commission asked to get an opinion from the District Attorney on the legality, and or risk involved, other

issues were the discrepancy between the upzone area and the TDR area.

An opinion was provided by District Attorney Smith (Attachment D). To summarize, the Transfer of Development rights tool is valid planning tool, but he cautions that it has not been tested in Oregon. Smith also listed concerns with two different treatments, both which are being recommended, for the upzone and TDR area, and suggested that if approved the Commission's findings clearly spell out the reasons why the areas are being treated differently. His overall advise is to proceed with caution.

#### **Planning Commission Recommendations**

- 1. To Change a portion of the FF-10 zone to R-R (10) (a new zone, L.U.D.O. Section 3.220 "R-R" Rural Residential) as proposed by the TLSA Steering Commission and as delineated on the map entitled TLSA Recommendation, and dated, September 1997, and also including as R-R(10), those areas shown on the map as the proposed R-R(5) upzone, and Transfer of Development Rights Test Area.**
- 2. To adopt development standards for fire, scenic, and roads within the new R-R(10) zone, with two wording changes in Section D.2. Scenic Development Standards D.2. (b) and (g) from mandatory requirements for house colors, and fences, to non-mandatory requirements; and with a wording change in Section E. 9. (e) Fire Standards from undergrounding of power and telephone being located underground where practicable instead of where possible. (Ordinance Attached)**
- 3. To implement the Lot of Record provision in the F-2 Commercial Forest Zone for parcels within a fire protection district or by contracting for fire protection, based on the Legislative intent to provide for fairness and equity to landowners owning prior to 1985 and, not to implement the Template Test provision based on the available area wide information regarding overall landuse patterns, land values, and infrastructure in the F-2 Commercial Forest Zone based on the TLSA study.**
- 4. To put on 'hold' the Transfer of Development Rights Test Area with direction to planning staff to explore the necessary size of the receiving area; look into who manages the conservation easements and; to gather more information in order to determine the reason and potential effectiveness of implementing this tool in the TLSA area.**
- 5. Not to upzone the approximately 200 acre area identified by the Steering Committee from a F-F (10) zone to a R-R (5) zone, and to review this issue at the bi-annual advisory group review with respect to the additional information that will be available concerning the Transfer of Development Rights.**

# ATTACHMENT "A"

## TLSA " QUICK FACTS"

The TLSA 'Quick Facts' sheet was put together to provide a broad overview of the extensive data that provided the basis for the recommendations of the TLSA study.

### GROUNDWATER AQUIFERS

- The previous report information presented two years ago was a broad overview of water in TLSA. This study identified overdraft areas with a computer model based on assumptions about aquifer behavior.
- Since then the TLSA study has done more detail mapping of well behavior. The facts seem to indicate that the original model was too pessimistic.
- The Jervey Study, December 1996, provided more water data in the TLSA:
- All of the aquifers in TLSA are water table aquifers or hydraulically tied to water table aquifers.
- These aquifers were identified and mapped, for the first time, through the TLSA process. Aquifer systems were identified using similar rock types; similarities in static water levels of the aquifers; similarities in yield, decline and performance criteria, and aquifer continuity.
- 817 wells were included in this review, 592 wells were located and are shown on TLSA maps.
- There is no obvious overall trend of aquifer depletion in TLSA.
- Declines in wells (observed) occur primarily in basalt aquifer wells and appear to be linked to the internal structure of the basalts.
- Deepenings of wells (where there was a lowering of static water levels) are due to specific negative situations having to do with the geology adjacent to the wellbore.
- Generally, 7 Mile Hill has basalt aquifers and; Cherry Hill/Browns Creek has sedimentary aquifers.
- Basalt aquifers have a more erratic behavior i.e., higher fluctuations (higher highs, lower lows); sedimentary aquifers have lower yields, but consistent performance.

December 1997

page 1

K:\wpwin60\tlsa\quick

- Domestic water usage per average household (gross) is approx. 200,000 gallons/year.
- Irrigation water usage (gross) is approx. 434,555 gallons/year per acre.
- Information gained through this study provides the foundation for a data base. Continued monitoring can be used to help individual property owners to better understand the behavior of their wells and help to avoid future problems.

## COUNTY ROADS

- Wasco County Public Works Dept. maintains 70 miles of roads in the TLISA but many of the rural properties are served by private roads and public roads which are maintained by adjacent landowners.
- Roads that are not paved now are unlikely to be paved by Wasco County in the foreseeable future.
- Under existing zoning regulations, in rural residential areas of TLISA, 498 new homes could be built (301 existing). This would increase demand of services on roads that the county would have to provide. 185 of the total potential new homes could be built on Seven Mile; 313 in the Cherry Heights/Browns Creek. (Does not count potential new homes in resource zones).
- The capacity of a road is expressed as a maximum daily volume measured in Average Daily Traffic (ADT), along with other factors applicable to capacity assessments for individual road segments, such as grade, curves, lane and shoulder width. The capacity of a road is unaffected by whether it is a gravel road or a paved road. (1 home averages 4 trips/day) This is a 30 year old figure, the estimate is low.
- Four county maintained roads in TLISA have the traffic capacity remaining to accommodate new development under existing zoning. The following roads would be within their design capacity as constructed today. Roads in TLISA with at least 25% capacity remaining are shown below .

December 1997

page 2

K:\c:\wpwin60\tlsa\quick

	Capacity	ADT	at Buildout (current zoning)	Total
Mill Creek Rd.	1500	317	(+60 ADT) =	377
Cherry Hgts. Rd.	1500	724	(+472 ADT) =	1196
Browns Crk. RD.	1500	353	(+478 ADT) =	831
State Rd.(not counting east & west ends which do not have existing capacity)	1500	352	(+740 ADT) =	1092

- Funds for road maintenance and improvements do not come from property taxes. Funding sources include: 1. Timber receipts (which are being phased out) and; 2. a portion of the state highway funds allocated to Counties based on number of vehicles registered in the county. Property owners with cars registered in another county do not contribute to county roads.
- There are some public roads that are not maintained by anyone. You can experience problems with the maintenance and cost of maintenance of your road.

## FIRE

- There are two fire protection districts in the TLSA. Not all areas are in a fire protection district. Rural Residential areas in the TLSA are, for the most part, in either the Mosier Rural Fire Protection District, which is made up of volunteers; or Mid Columbia Rural Fire Protection District.
- The Oregon Dept. of Forestry Fire Protection District covers wildfires in the TLSA. ODF does not cover structural fires. Residences pay a tax to the ODF for wildfire coverage.
- Fire District response times (time it takes to get to a call) vary depending of access to the property and distance. Portions of the TLSA within the Mid Columbia Fire Protection District are not accessible for fire trucks
- Emergency response time can not be guaranteed. Under some extreme conditions, you may find that emergency response is extremely slow and expensive.

December 1997

page 3

K:\c:\wpwin60\tlsa\quick

## POTENTIAL DEVELOPMENT

- Under current zoning the potential for new houses is:
- In the Rural Residential, R-R(5) zone = 93
- In the Farm Forest, F-F(10) zone = 405
- In the Agricultural zone AG -1 = 14
- In the Commercial Forest, F-2(80) zone = 51 Template Test Dwellings  
42 Lot of Record Dwellings  
(24 In a fire district)

December 1997

page 4

K:\c:\wpwin60\tlsa\quick

**EXHIBIT 3**

**2000 Settlement Agreement**

## SETTLEMENT AGREEMENT

This settlement agreement dated as of January 5, 2000, and the parties to this agreement are Kenneth A. Thomas ("Thomas"), Wasco County (the "County"), and Joseph Betzing ("Betzing").

### Recitals

A. In LUBA Case No. 99-178 Thomas filed an appeal with the Land Use Board of Appeals regarding County Ordinance No. 99-111. This appeal is stayed pending mediation.

B. In LUBA Case No. 99-109 Thomas filed an appeal with the Land Use Board of Appeals regarding County Ordinance 99-114. This appeal is stayed pending mediation.

C. In LUBA Case No. 98-043 Thomas appealed a permit for a dwelling issued by the County to Betzing. This case has been remanded by the Land Use Board of Appeals for further proceedings consistent with their opinion.

D. The parties to this agreement mutually wish to agree to a framework for resolution of the above cases and all disputes arising out of those cases. Therefore in exchange for their mutual promises, the parties agree as follows:

### Terms

1. The County Department Staff, acting in good faith shall use best efforts in supporting a legislative zone change and comprehensive plan change to modify to zoning and comprehensive plan designation of the property marked in exhibit A, from F-2 to FF-10. The changes will be initiated by the County unless Thomas elects to initiate them. If property owners other than Thomas elect not to participate then Thomas and the County will proceed and exclude the other property owners' land from the change.

2. Thomas acting through his attorney Michael J. Lilly shall assist the County staff by submitting evidence, drafting staff reports, and drafting findings for the zone and plan changes referenced above.

3. Betzing hereby waives all rights to remonstrate against the zone and plan changes referenced above.

4. Thomas hereby waives all rights to remonstrate against Betzing's application for a single family dwelling if the conditions set forth exhibit B are imposed on the dwelling permit for Betzing. Betzing agrees to accept the conditions set forth in Exhibit B and agrees to abide by the terms and conditions of the permit.

5. If the zone change and plan change applications referenced in paragraph 1 are approved by the County Court, and become final without an appeal or are affirmed on appeal, then Thomas will withdraw the appeals referenced above in paragraphs A and B. If the zone change applications are not

approved by the Wasco County Court then Thomas and the County agree to enter non-binding mediation but Thomas will be free to continue the appeals referenced in paragraphs A and B if the mediation fails to result in a settlement.

6. If the zone and plan changes are approved by the County Court and the approvals are appealed then the County shall support its decision, but not be obligated to prepare or file briefs in opposition to the appeal. Thomas will file briefs in opposition to the appeal, but shall not be obligated to file briefs regarding issues that are not relevant to property in his ownership.

7. If the zone change or plan change are reversed or remanded on appeal, and if Thomas and the County are unable to agree on an appropriate course of further action, then Thomas and the County will enter into non-binding mediation. If the mediation does not result in a settlement then Thomas may continue the appeals referenced in paragraphs A and B.

#### Miscellaneous Provisions

8. Binding Effect. This Agreement shall be binding on and inure to the benefit of the parties and their heirs, personal representatives, successors, and assigns.

9. Attorney Fees. If any suit or action is filed by any party to enforce this Agreement or otherwise with respect to the subject matter of this Agreement, the prevailing party shall be entitled to recover reasonable attorney fees incurred in preparation or in prosecution or defense of such suit or action as fixed by the trial court, and if any appeal is taken from the decision of the trial court, reasonable attorney fees as fixed by the appellate court.

10. Amendments. This Agreement may be amended only by an instrument in writing executed by all the parties.

11. Entire Agreement. This Agreement (including the exhibits) sets forth the entire understanding of the parties with respect to the subject matter of this Agreement and supersedes any and all prior understandings and agreements, whether written or oral, between the parties with respect to such subject matter.

12. Counterparts. This Agreement may be executed by the parties in separate counterparts, each of which when executed and delivered shall be an original, but all of which together shall constitute one and the same instrument.

13. Waiver. A provision of this Agreement may be waived only by a written instrument executed by the party waiving compliance. No waiver of any provision of this Agreement shall constitute a waiver of any other provision, whether or not similar, nor shall any waiver constitute a continuing waiver. Failure to enforce any provision of this Agreement shall not operate as a waiver of such provision or any other provision.

14. Further Assurances. From time to time, each of the parties shall execute, acknowledge, and deliver any instruments or documents necessary to carry out the purposes of this Agreement.

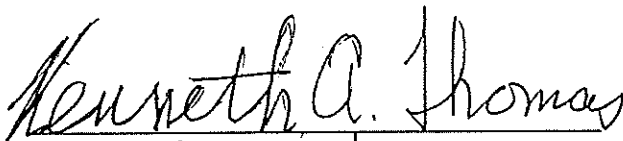

15. Time of Essence. Time is of the essence for each and every provision of this Agreement.

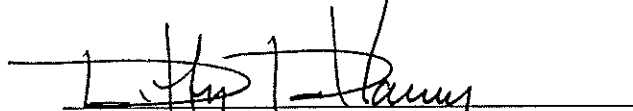

16. No Third-Party Beneficiaries. Nothing in this Agreement, express or implied, is intended to confer on any person, other than the parties to this Agreement, any right or remedy of any nature whatsoever.

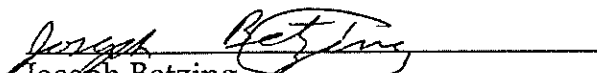

17. Exhibits. The exhibits referenced in this Agreement are a part of this Agreement as if fully set forth in this Agreement.

18. Governing Law. This Agreement shall be governed by and construed in accordance with the laws of the state of Oregon.

Dated: 1/5/00

## TRANSITION LANDS STUDY AREA GROUND WATER EVALUATION WASCO COUNTY, OREGON

Gay M. Jervey

### SUMMARY

The evaluation of ground water quantity is important to residents of the Transition Lands Study Area (TLSA). Assessment of the volume available has been difficult because of one major problem; regardless of the method of assessment used or the assumptions made in estimating available ground water, none of the ground water models used to date explain the declines seen in some wells in the TLSA or the fact that some wells have had to be deepened due to lack of water in the wellbore.

The purpose of this report is to examine this one issue in detail using available information. The conclusions presented are:

- all of the aquifers in the TLSA are water table aquifers or hydraulically tied to water table aquifers
- these aquifers can be identified and mapped
- there is no obvious overall trend of aquifer depletion in the TLSA
- declines observed occur primarily in basalt aquifer wells and appear to be linked to the internal structure of the basalts
- deepening (where related to lowering of static water level) are due to specific negative situations having to do with the geology adjacent to the wellbore
- more work needs to be done to better understand basalt aquifer performance
- close observation of wells in densely drilled areas is necessary to improve estimation of appropriate well spacing

- well spacing should not exceed what has been demonstrated to be effective within the TLSA unless additional information is provided to the Wasco County TLSA Steering Committee or other County representatives

### INTRODUCTION

The main questions which must be addressed in order to better understand aquifer behavior and availability of ground water in the TLSA are:

- 1) How much ground water is available to the individual land owner?
- 2) Why do some wells have to be deepened?
- 3) Why do some wells show water level declines?
- 4) How close together can wells be and still operate properly (without undue interference)?

In order to address these questions, a detailed study of water wells in the TLSA was conducted. Records for a total of about 817 wells in and adjacent to the TLSA were included in this review. It is estimated that there are an additional 40 to 60 wells within this area that have no well records and were not included. The lack of this information is probably not critical to this review, since it is a small proportion of the data set which has been examined.

An initial and ongoing problem is the uncertain geographic location of a number of the water wells within the TLSA. Work done by the Wasco County Watermaster has contributed a great deal toward

locating existing wells. Of the well records mentioned above, 592 wells were located and are shown on the map on the preceding page (a large version of this map with topography added is also available). Almost all of the wells inside the TLSA area were located, at least approximately (by tax lot). Most of the 225 unlocated wells lie outside the TLSA boundary, mainly in the Rowena and west The Dalles areas. Within and immediately adjacent to the TLSA, 58 deepened wells were identified and studied in detail. The data collected for the wells in this review is in Table A at the end of this report (Appendix A). Included in this table are multiple measures of static water levels made in certain wells. Multiple static water level measures are also included in Tables A1, D and E (Appendix A).

Sources of information for this report are primarily the extensive previous studies done in this area and referenced at the end of this report (Lite and Grondin, 1988, and Kienle, 1995). Important additional information was contributed by the people listed in acknowledgment at the end of this report who work or reside in Wasco County or have a general or specific interest in the topic covered. However, errors in data or interpretation present in this report text are entirely the responsibility of the author.

The data and interpretations in this report are provided as a service by Jervey Geological Consulting in response to questions raised by the TLSA Steering Committee. Jervey Geological Consulting is primarily involved in oil and gas exploration and has no special qualifications in the evaluation of ground water resources. Therefore, this document should be primarily used as a basis for evaluating the data and observations it records. It is not specifically designed to be used in formulating public policy. The material collected here may also be helpful for use in future studies by qualified hydrogeologists.

#### GROUND WATER AVAILABILITY

An estimate of available recharge volume is necessary to evaluate how many wells per unit area an aquifer can support. For the most part, the aquifer systems in the TLSA are recharged by precipitation (diffuse) and intermittent runoff in valleys. The lowest aquifer systems, are also probably recharged and maintained by perennial streams (Mill Creek, Chenowith Creek, and Mosier Creek).

A key factor in recharge to the TLSA area is its precipitation pattern. The area lies in an intermediate position between humid and arid climates. The cycles of heavy and low precipitation that occur over many years reflect this intermediate position. Because of this, a range of recharge volumes should be calculated that

reflect both normal (or average) conditions and low precipitation conditions over specific time intervals.

The graph in Figure 1 shows precipitation volumes in Hood River and The Dalles. The longest dry cycle in recorded history is the period from 1922 to 1944 (23 years) overlapping the occurrence of The Great Dust Bowl in the central United States. The average precipitation in Hood River during this period was 26 inches (84% of normal values). On the average, rainfall in The Dalles is about 48% of the amount recorded in Hood River.

Figure 2 is derived from Oregon Water Resources Department Ground Water Report #33 on the Mosier area (Lite and Grondin, 1988) showing the most probable change in precipitation levels across the TLSA. The western boundary, closer to Hood River, probably receives over 25 inches per year; the eastern boundary near The Dalles, about 15 inches.

A recent report on the Columbia Plateau aquifer system issued by the U.S.G.S. (Whiteman, et al, 1994) includes part of the TLSA on the extreme southwestern margin of the report area. The estimate for recharge for the TLSA from this report would be 2 to 15 inches per year, depending on total precipitation. In effect, the lower the rainfall, the smaller the percentage of water that is available for recharge. Using an average of 20 inches of precipitation per year, an example estimate of recharge can now be calculated. At this level of precipitation, the proportion returned as recharge is around 30% (values presented in the Whiteman report are 6.82" of recharge for 21.06" of precipitation in a temperate climate). Under dry conditions over several years, this percentage probably drops to about 26%. The overall calculation for recharge in this example is shown in Table 1 (page 5).

The estimates used were drawn from several sources; but primarily from U.S.G.S. Professional Paper 1413-B on the Columbia Plateau Aquifer System (Whiteman, et al, 1994).

#### DOMESTIC WELL USAGE

Water usage per average household has been estimated by several authors working in this general area:

- Lite and Grondin (1988)  
288,350 gallons/year
- Kienle (1995)  
191,760 gallons/year
- OWRD information pamphlet for well owners  
(1993) average of values cited:  
217,500 gallons/year
- Local utilities, Chenowith and The Dalles:  
90,000 to 350,000 gallons per year

Figure 1. Precipitation for Hood River and The Dalles, Oregon, five year running averages.

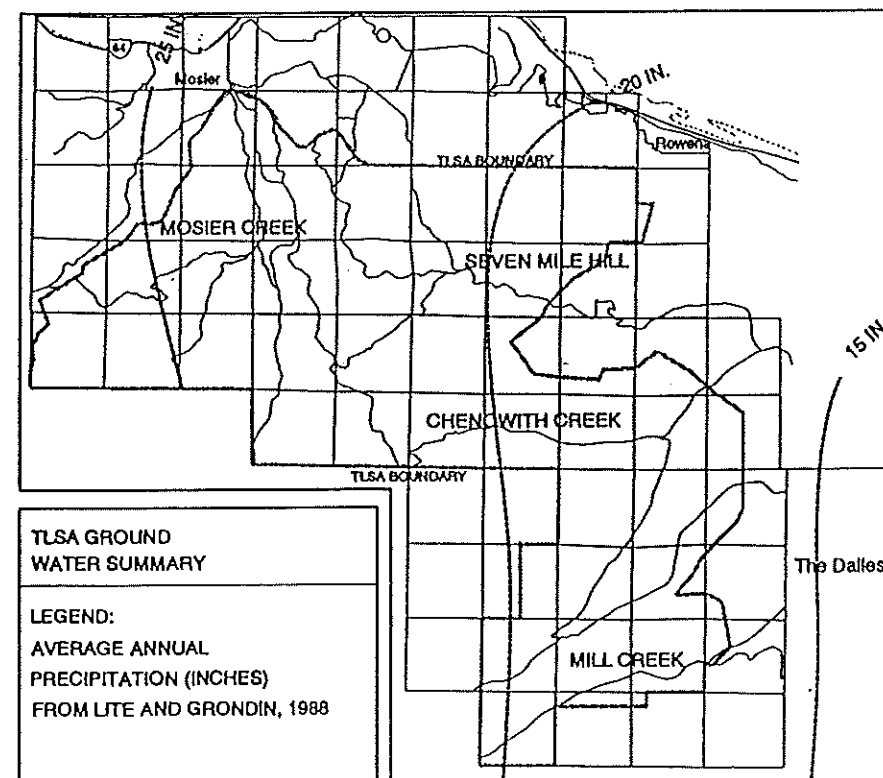

Figure 2. Average annual precipitation, TLSA (from Lite and Grondin, 1988).

Table 1. Examples of recharge and discharge calculations using different assumptions.

It is evident that there is a range of usage, but on the average over a large group, a figure of 100,000 to 300,000 gallons per year is probably a reasonable range.

Of the ground water used, a percentage of household waste water and lawn irrigation is returned as recharge. Designs for most domestic systems (in houses) assume an average volume of around 200 gallons per day per household (73,000 gallons per year) is produced as waste water. In addition, a small percentage of the water used in the lawn and garden will return as recharge to the aquifer.

The amount returned is extremely difficult to estimate, because it depends on precipitation levels, time of year, type of waste water, and the amount of water usage of the household. Under favorable conditions of rainfall, water use, soil type and other factors, 50% or more of water extracted from an aquifer may return as recharge (Stephens, 1996). However, because there is no data in the TLSA area that can support an estimate of this magnitude, it is better at this time to simply use the same percent of recharge that was used in the estimate of natural recharge.

The calculations for usage can be compared with average recharge to yield an approximation of well densities (Table 1) which could perhaps be supported by the aquifers in the TLSA. In addition to these figures the estimates made for minimum to maximum elevations in the NGS, Inc. TLSA study (Kienle, 1995) are provided for comparison. There is a range of volumes presented; neither case can be definitively proven at this point in time.

There is a problem that appears at once; even at far lesser well density than the most conservative figures in Table 1, TLSA domestic wells show declines and some have to be deepened. This observation will have to be addressed before any ground water model can be considered acceptable.

Even with very conservative estimates for recharge such as those used in the NGS, Inc. study of the TLSA (Kienle, 1995), there is no indication that current levels of usage have exceeded recharge. The reason that a number of sections appeared to be in an overdraft situation was due to the maximum permitted water usage used in the model calculations (about 816,790 gallons per acre per year for sections with water right acres). This is far in excess of what has been documented as actual irrigation usage (Lite and Grondin, 1988, and Whiteman et al, 1994). The actual use of ground water in irrigation is summarized in the next discussion.

## IRRIGATION USAGE

The same procedure used for domestic wells can be used when assessing irrigation usage versus recharge. Previous reports (Lite and Grondin, 1988 and Kienle, 1995) estimated actual irrigation use at about 1.1 to 1.5 acre feet per acre of orchard per year, or about 488,000 gallons per acre per year. This was based on an estimate of 36" of water required per year by orchard crops, 18" of which was supplied by rainfall in the orchard area around Mosier. The calculations shown in Table 1 assume that if the average rainfall is 20", average usage for irrigation would be around 16" of water per acre. The following calculations assume that the majority of ground water available for irrigation is replaced by diffuse recharge. It is likely that additional recharge by local sources such as perennial streams is available to the lowest aquifers in the TLSA. It is also important to note that a substantial fraction of irrigation (20-50%) is from surface water sources.

To reiterate; the central issue that needs to be examined is that of the declines and well deepenings observed in wells throughout the TLSA. A corollary observation that must also be addressed is that other wells do not seem to show the effects of decline.

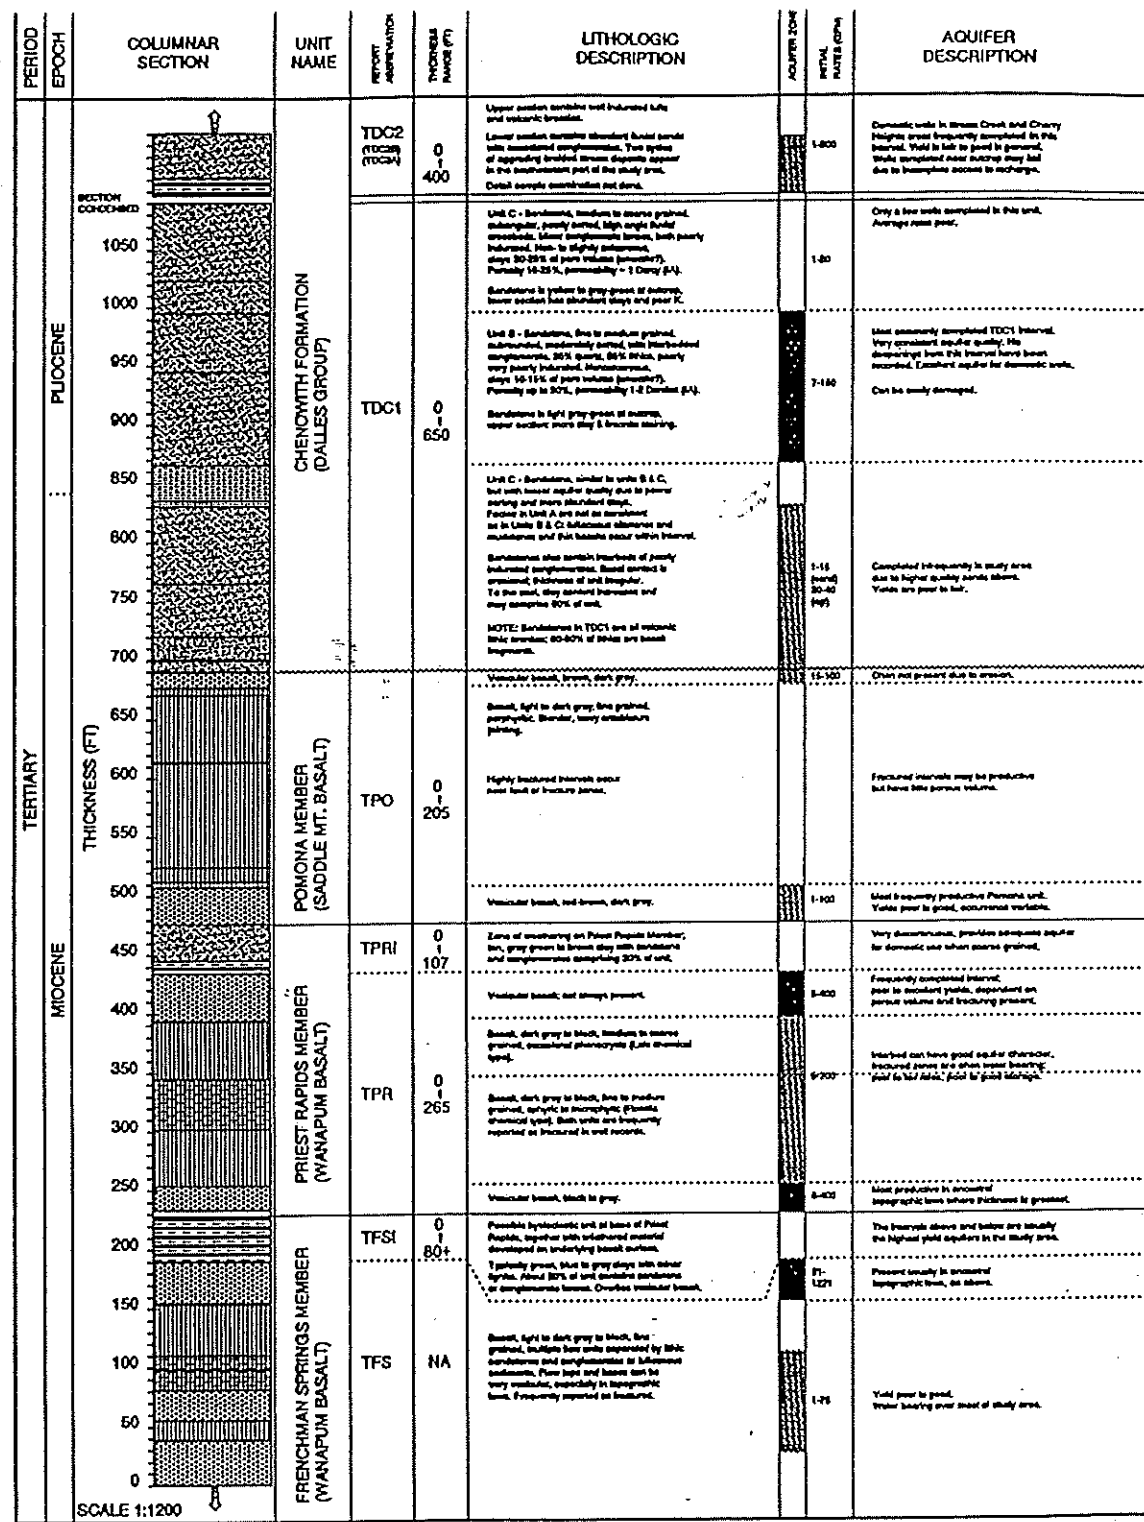

At this point, it is necessary to briefly describe aquifer types and their characteristics. Once this information is presented, an assessment of the assumptions concerning recharge and discharge can be made.

## GENERAL GEOLOGY - AQUIFERS

The descriptions in this part of the report are drawn from a variety of sources, primarily Lite and Grondin, 1988, Kienle, 1995 and others which are listed at the end of the report text and from field work in parts of the study area. There are some indications that differences between basalt aquifers and sedimentary (sandstone and conglomerate) aquifers give rise to differences in water well performance. It is critical to examine the two aquifer types before looking at individual aquifer systems. In addition, there are some important differences among basalt aquifers which need to be introduced at this time. This discussion will be limited to the description of characteristics which affect aquifer behavior. Figure 3 is a columnar description of the sequence of various rock types found in the TLSA and contains brief descriptions of aquifer qualities.

## BASALT AQUIFERS

Figure 4 is from the U.S.G.S. Columbia Plateau report previously cited (Whiteman, et al, 1994). It shows the internal structures in typical basalt flows and some of the physical characteristics, such as porous volume, which affect their performance as aquifers. In

GENERALIZED STRATIGRAPHIC SECTION

TLSA, WASCO COUNTY, OREGON

Figure 3. Generalized stratigraphic section, TLSA, Wasco County, Oregon (adapted in part from Keinle, 1995, and Lite and Grondin, 1988).

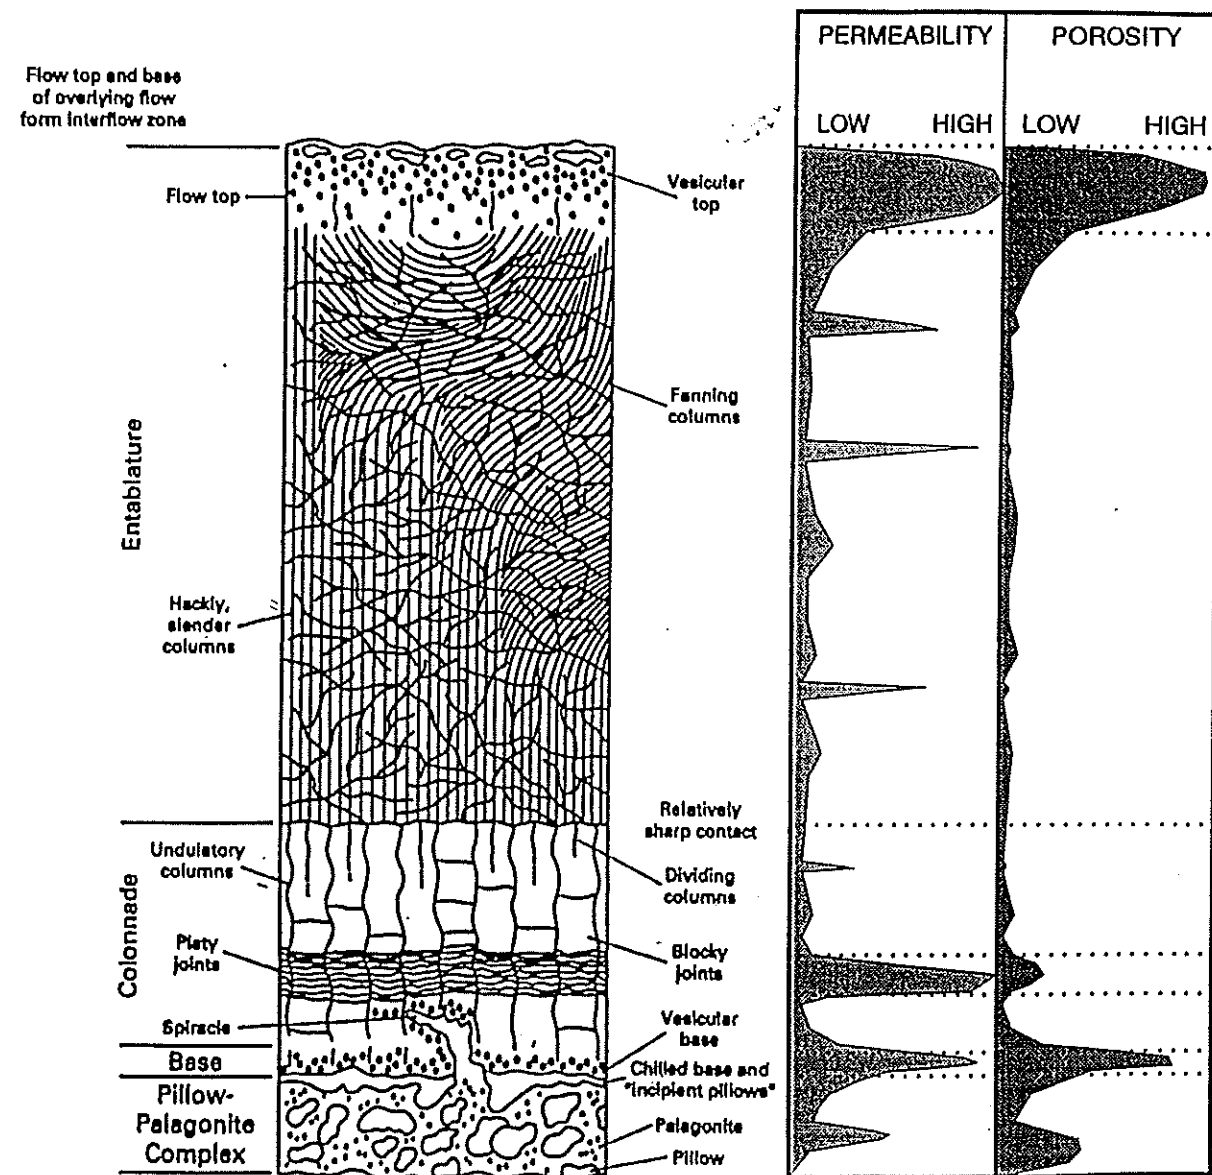

Figure 4. Aquifer quality variation in basalt flow units (diagram on left from Whiteman, et al, 1994).

general, the flow tops and bases, with vesicular (vesicles: openings left by escaping gases when lava cools), and other types of porous volume (breccias: broken rock fragments) can have both high porosity and high permeability. The entablature and colonnade portions of the flows have far less porous volume. Porous volume in these central parts of a lava flow exists mainly in fractures and is very low in comparison with flow tops and bases, in general. The interbeds of basalt flows consist of soils, sands and clays developed on top of flows and the clay-rich pillow palagonite complex formed when the base of the next basalt flow contacts water or moisture bearing soils and sediments.

The curves drawn in Figure 4 show diagrammatically how porous volume and permeability change through the basalt section. None of the section is usually entirely impermeable, but great variations occur from top to bottom of the flows. The best aquifers, which occur in vesicular and/or brecciated flow tops and bases, have internal variations which are also of significance. The porous volume can consist of two types of openings; 1) vesicles and interfragment porosity of breccias, and 2) the porous volume occurring in open fractures connecting them. These two features have very different hydraulic character.

Entablature and colonnade units seem to have very poor lateral (horizontal) permeability, but the fractures in them can have fair vertical permeability. Occasionally, if in the vicinity of a fault or fracture zone, these two basalt types can be completed as aquifers, but their long-term performance is questionable. The interbed sediments may also occasionally act as good aquifers, if they consist of well sorted sands or gravels.

The Pomona, Priest Rapids and Frenchman Springs basalts are the commonly penetrated water bearing units in the central and western parts of the TLSA. The most important differences among them are listed below and shown in Figure 3.

- Pomona (TPO)
  - flow top is often eroded away, vesicular flow base is generally in the order of 5-15 feet thick
  - canyon filling and restricted to lower elevations in the western part of the study area
  - shows an intercalated relationship with Dalles Group sediments at its flow margins
- Priest Rapids (TPR)
  - distinguished by a commonly very thick pillow palagonite (lava erupted into water or water bearing sediment) sequence at its base and well developed vesicular zone
  - in some parts of the report area composed of

two flow units; the interbed between them can be an adequate aquifer

- Frenchman Springs (TFS)
  - At least three submembers occur in area: Ginko (oldest), Sand Hollow and Sentinel Gap
  - frequently exhibits a very continuous, thick vesicular flow top in topographic lows
  - highest yield wells in the TLSA are usually completed in the uppermost part of the Frenchman Springs, combined with the overlying Priest Rapids flow base
- Grande Ronde (TGR)
  - very few wells completed in this unit; oldest and deepest basalt exposed in TLSA wells

#### SEDIMENTARY AQUIFERS

Two sedimentary formations act as aquifers in the report area; the Dalles Group (TDC) and various younger alluvial and flood-deposited sands and gravels, referred to as Quaternary alluvium (QAL) and glacial flood deposits (QGF). Most of the wells in sedimentary rocks are completed in the Dalles Group.

The primary difference between the basalt and sedimentary aquifers is illustrated in Figure 5. The basalts are rigid and brittle: they are easily fractured. The basalt flow tops and bases may contain vesicles or breccias which provide large porous volumes. Together with fractures, this type of rock is a high quality aquifer with high porosity and high permeability. On the other hand, basalt that is fractured but not connected to pore spaces such as vesicles, may have high permeability but very low porous volume. In comparison, sedimentary aquifers tend to be more uniform in porosity and permeability but with lower well yields than the best basalt aquifers.

The Dalles Group consists of several aggrading cycles of braided stream sandstones and gravels and associated floodplain deposits. It also contains ash fall tuffs and abundant tuffaceous material, particularly in the upper third of its thickness. In structure and organization of its rock types, it is very similar to the main producing section in Prudhoe Bay, North Slope, Alaska. Figure 6 shows the vertical sequence in this deposit as an illustration of the environment of deposition similar to that in the lower part of the Dalles Group in the TLSA.

Examination of samples and well records in the Dalles Group also indicates that at the base of the braided stream cycles (Chenoweth Creek-TDC1 and Brown Creek-TDC2A and TDC2B, discussed later in this report), permeability and porosity are often very good and fairly consistent across the aquifers. The highest

Figure 5. Comparison of basalt and sandstone internal structures, porosity and permeability.

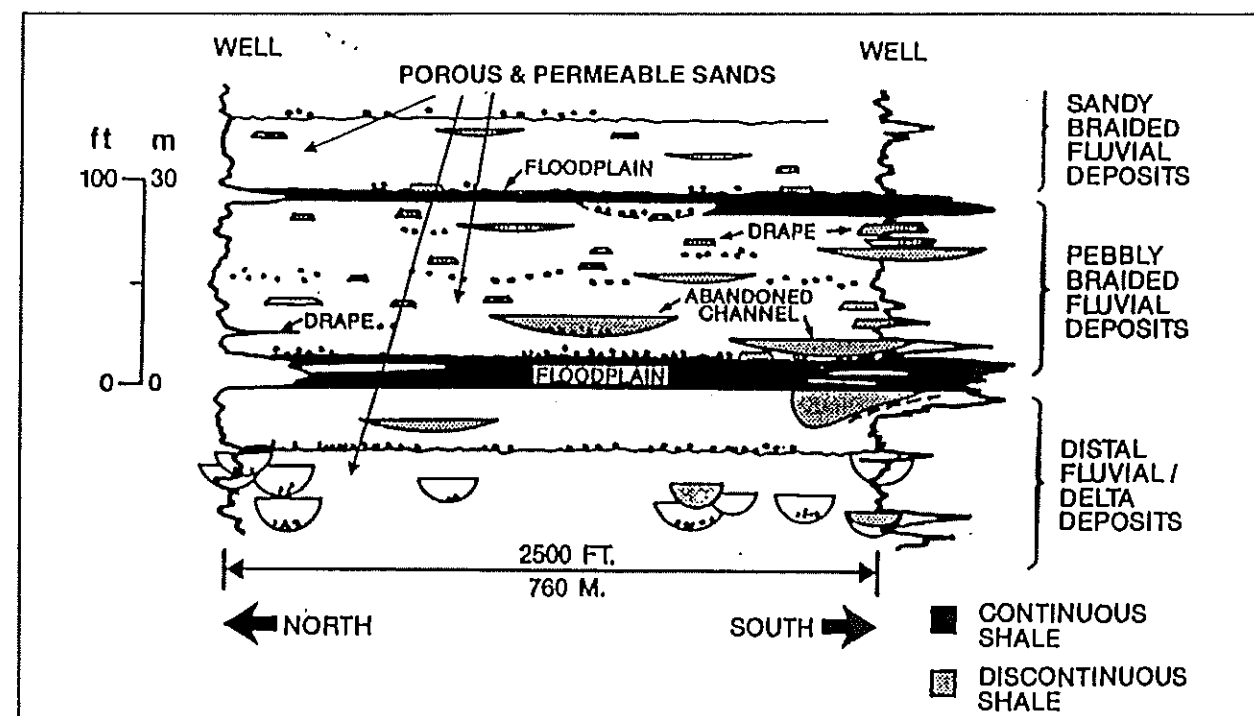

Figure 6. Distribution of rock types, typical deltaic/braided stream association as an analog to Dalles Group aquifers. Diagram is of the Ivishak Sandstone, Prudhoe Bay, North Slope, Alaska (adapted from Atkinson, et al, in Barwis, McPherson and Studlick, 1990).

quality basalt aquifers exceed the Dalles Group aquifers in both yield and volume of water in storage per unit area. However, for domestic well development and possibly for irrigation, the Dalles seems to display very stable aquifer behavior. Most of the subunits mentioned above are exposed in layers in the weathered cliffs adjacent to The Dalles, Oregon and in the southern and western part of the study area.

## TLSA AQUIFER SYSTEMS

The three maps on the following pages show depth to aquifer, depth to static water level and water yield in the TLSA. T2NR12E sections 9, 16 and 19 have some of the deepest wells in the TLSA. The Mill Creek, Chenoweth Creek and Mosier Creek valleys have the most productive wells in the area. The variety seen in these maps can be attributed to the occurrence of water in separate aquifer systems.

A collection of 28 cross sections was constructed to assist in the identification of aquifer systems in the review area. Seven of these sections extend into areas beyond the TLSA. Cross section locations are shown in the location map at the beginning of this report. A selection of the cross sections is used to illustrate points in the remainder of this report.

Formation boundaries were identified using previous studies, surface exposures of the formations and rock types identified in the well records. Aquifer systems were identified using:

- similar rock/formation types,
- similarities in static water level of the aquifers,
- aquifer continuity, and
- similarities in yield, decline and other performance criteria.

When examining the cross sections the following items are of importance:

- Each section is exaggerated vertically; the actual slope of the surface and tilt of the subsurface formations are much more subdued than shown. The sections are exaggerated vertically so that changes from well to well may be more easily seen.
- Patterns on the vertical columns representing a well are based on rock type as described by the driller. A legend describing these patterns is shown in Figure 3 and is also included at the beginning of Appendix B. Speckled patterns are sandstones or conglomerates, generally found in the Dalles Group, alluvial deposits or in interbeds

between basalts. Vertical banded patterns are basalts and horizontal banded patterns are usually clays or interbedded clays and basalts. Hexagonal dotted patterns are vesicular basalts.

- Water producing intervals are indicated with this symbol  next to the well column. The static water levels are shown in blue. For more details as to symbols in the cross sections, please refer to the cross section legend at the beginning of Appendix B. The data presented is not altered materially from the original driller's description.

Cross section 26 is a detail section and differs from most of the other sections in that it has very few wells and more descriptive information. However, it is a good example of the kinds of situations that can be discovered by cross section construction. The section is located immediately west of the western TLSA boundary and has a well belonging to a TLSA Steering Committee member on it (W. Huskey).

The aquifers on the section are in basalts; the wells penetrate three separate aquifer systems. The systems can be identified by the change in elevation of the static water level and the change in position of the aquifer zone itself. To the south (right) side of the section, a well penetrates the Pomona, Priest Rapids and the top of the Frenchman Springs basalts. It is water productive only in the Frenchman Springs and is distinguished by a high water column and good production characteristics (yield approximately 25 gpm, drawdown unknown). This aquifer is separated from the adjacent well's aquifer by a fault and there is an almost 200' difference in water level between them.

The two central wells are in the same aquifer and are quite similar in other respects as well as static water level. It is interesting to note that the LeSasso well was originally drilled to the Pomona/Priest Rapids interbed in 1976. At some point not long afterwards the well was deepened to the Priest Rapids/Frenchman Springs interbed. At that time there were only three residences in the entire section and no irrigation wells. Two other wells 1.5 miles away in the Rocky Prairie area are similar to this one (deepened from the Pomona before use). The Pomona in this area is well exposed and forms the cliffs surrounding the town of Mosier. It appears to fill and empty at the outcrop on an annual basis. In wells such as the LeSasso well, in January (when the well was drilled) it would appear to be an adequate aquifer; by August it would be effectively drained. In the adjacent Mizeski well, this zone was not water bearing.

The Huskey well, on the far left side of the section, benefits from being immediately adjacent to a canyon flowing into Rock Creek. Static water levels often rise

as such a feature is approached. It also appears to be affected by a local fracture trend which delivers water to the wellbore immediately after a rainfall event. The drawback to being in this position is that the behavior of the static water level can be quite erratic; the well is drained in dry seasons as quickly as it fills during wet cycles and the volume available in summer months may be unreliable.

The information above is somewhat interpretive and other investigators may come to different conclusions about this material. But it is important to do this kind of correlation in order to understand the relation of one well to another and the position and distribution of each aquifer. If pump tests were performed on these wells, a great deal more information would be gained by identifying which wells are in direct communication.

Table 2 is a summary of the aquifer systems in the TLSA area and the map on the page following shows their areal distribution. The system names are based on common geographical names. Most of the abbreviations refer to the main producing formations, except in systems where several formations are productive. As can be seen in this table, each system also has characteristic static water level declines and types of well deepenings (or lack of them).

The aquifer systems described are usually separated from other systems by changes in topography or faults. The position of the static water level within each of them is roughly correlative to the surface elevation at the well.

Figure 7, a plot of static water level versus elevation illustrates the point made above. The aquifer static water level elevations show a very close correlation with surface elevation of the well. Each aquifer system develops a gradient unique to its members, but the overall picture is one of aquifers very closely tied to ground level and existing in specific compartments separated by lateral changes (faults, topography, etc.). This is one reason why use of diffuse recharge is probably appropriate in the calculation of the TLSA water budget. Almost all of the TLSA aquifers are water table aquifers. Even the artesian flowing wells seem to be closely linked hydraulically to surrounding water table aquifers above them.

It is perhaps easier to see the relation between ground level and static water level by quickly reviewing the cross sections in Appendix B. In these sections, the static water levels, where continuous, show a distinct relation to ground surface elevation.

#### STATIC WATER LEVEL (SWL) CHANGES

Table D (Appendix A) contains data from all multiple measures recorded in and adjacent to the TLSA

over the last 40 years. Many measures were made by a U.S.G.S. study in 1979 and by Oregon Water Resources Department in the period 1981-1986. The long term hydrographs for wells within the TLSA are included in Figures 8A-8E of this report.

The values shown in Table D are somewhat subjective in that some consideration of time of year of measurement and length of time between measurements has to be made in order to arrive at an estimate of decline or average annual fluctuation. This may introduce error in the estimates of as much as +/- 10-20 feet. But, in general, the overall trend of decline (or lack of it) and annual variation will probably yield the same picture when the group is considered as a whole.

The most striking feature of this collection is the frequent occurrence of SWL declines in the basalt aquifers. All but two of the 21 hydrograph wells in basalts and about 64% of the multiple measures in basalts show declines from 15 to 307 feet from the initial SWL, with a most frequent range of 30 to 80 feet of decline. The amount of decline often appears to be independent of time of drilling, rate of water extraction or height of the water column. Declines in SWL occur in areas with only a few wells per section, early in the history of ground water development and it occurs in recently drilled wells in densely drilled areas. In contrast, about 36% of measured basalt aquifer wells and almost all Dalles Group aquifers do not show declines greater than might be expected from seasonal fluctuation, even in areas of fairly dense drilling.

A corollary and equally important observation is that most of the basalt wells that show significant declines reach a stable position at some point during the life of the well. The position of stabilization is most commonly 30' to 80' below the original driller's static water level. The hydrographs in Figure 8a through 8e illustrate this observation. (Figures 8a-8e show summary hydrographs; individual hydrographs are available in previous Committee documents or in Kienle, 1995.)

Basalt aquifers do not show large declines if:

- they are extremely shallow (10 to 80 feet deep) and in a catchment position (shallow basin, or in an seasonally active drainage),
- occur immediately below a sandstone such as the Dalles Group or a Quaternary gravel or sand,
- occur immediately below a thick clay unit with overlying basalt aquifer units that are not saturated.

These three situations account for all the basalt aquifers which do not show large initial declines. The collection of observations suggests, but does not

prove, that the initial declines seen in basalt aquifers may somehow be related to their internal structure, the dual porosity found in fractures and vesicles or breccias. The diagram in Figure 4 is an illustration of a possible explanation for the rapid initial declines seen in some basalt aquifers. If the zone of saturation below the vadose zone (the transition from no saturation to 100% saturation) occurs in the entablature or colonnade parts of a basalt, the actual volume of water contained in the highest part of an aquifer may be very small. This part of the basalt may have very little horizontal connection with the rest of the aquifer. As the well is produced, decline in this section of the basalt may only recover under conditions of very high recharge. Each time the well is produced the water level will drop slightly and not recover until a point is reached that can be supported by the high volume porous part of the basalt aquifer. The fact that large declines are not seen in basalts that are overlain by Dalles Group or alluvium suggests that this explanation may be valid for some basalt aquifers, particularly those at higher elevations.

An alternative or possibly contributing explanation is in the normal response of fractured reservoirs to fluid withdrawal. The shape of the pressure sink around a well in a fractured rock is often one that shows a rapid but small drop of very large radius, and afterwards very little change in static water level while pumping. Figure 9 is a display of the data on two basalt aquifer tests presented in the Lite and Grondin 1988 report. The recovery curve is roughly an inverted mirror image of the decline during pumping. The shape of the build up curve, shown in Figure 10, indicates that recovery to original static water level may take much longer than the pumping time interval.

The decline in SWL may not be easily detectable after any one pumping period, but during seasons of heavy use, each time the well is pumped, the static water level will fail to rise back to its original position. Over a year the discrepancy may be large (10-20 feet) and unless the well is shut in for a long time, this process will continue until the fracture system pressure drops and equilibrates with the matrix (pore volume) pressure. At this point the well will maintain a reasonably constant static water level, if the volume extracted per unit time remains constant. Figure 10 shows a different type of plot with a logarithmic scale which allows for analysis of aquifer character. The change in slope seen in the Pomona test may be the pressure decline encountering a barrier or it could be the transition period before the fracture system reaches equilibrium with the porous matrix.

The hypotheses above are not necessarily correct. It may simply be that the basalt aquifers have poor

storage volume and/or access to recharge and consequently are declining and will fail in the near future. However, there are a few indications that this is not the case. These include:

- the observation that many hydrographs show static water level decline to a specific level, followed by stabilization,
- the continued drilling of new wells which appear to encounter original or near original aquifer pressures (suggesting that SWL declines are tied to individual wellbores), and
- the overall stability of static water levels in each aquifer system over the past 40 years

Each of these points will be illustrated with a specific example.

Figures 8a-8e contained all hydrograph curves in and adjacent to the TLSA. The Mill Creek, Dalles Critical Ground Water area, and Sevenmile Hill curves have declined to specific positions and are not, in general, showing rapid decline at this time. A few of the Mosier Creek wells have reached such an equilibrium position; the rest of them have not been measured for a number of years and cannot be assessed. The Chenoweth Creek and Root Road hydrographs are not indicative of a rapidly declining systems.

Almost every cross section in Appendix B that displays basalt aquifers shows at least one example of new wells being drilled adjacent to older wells with higher SWL than the older wells which have demonstrated declines. Figure 11 shows 3 wells in T12NR12E Section 7, Mosier Creek System. The oldest well (#569/573 Root) has developed a cone of depression that makes its static water level lower than the other two, younger wells. The difference between the SWL in the Root well and the Reeves well is around 50 feet. Many of the cross sections show examples of this situation. In these sections, an older well is displayed adjacent to a well drilled long afterward. In many cases, even though the wells are not separated by great distances, the newest well shows a higher static water level than the current SWL of the older well. This suggests that declines are directly the result of producing the well and are not perhaps representative of the state of the aquifer as a whole.

Figures 12 and 13 are displays of the static water levels in the TLSA aquifer systems versus time. The thin lines connecting points are multiple water level measurements in single wells. It is apparent that many of the basalt aquifer systems have wells which show declines. However, the trend of initial static water levels in all of the TLSA aquifer systems has not shown any correlation with time. In other words, there is no

Figure 9. Pomona and Priest Rapids pump test data, Mosier Creek System (data from Lite and Grondin, 1988).

significant increase or decline in any of these systems (this also implies that no appreciable co-mingling is occurring between systems). A minor exception to this summary is the Sevenmile Hill TFS2B aquifer. This aquifer is very shallow, of limited extent and three out of four wells in it were deepened to the Sevenmile TFS2 system.

Another significant observation is that in a few wells, recovery to original static water levels has occurred in basalt aquifers with large initial declines. It is notable that only in particular cases does the high rate of initial decline continue, resulting in aquifer failure. Most of the wells showing large declines continue to provide water in a satisfactory manner. The specific reasons for aquifer failure will be discussed in the next section.

In order to assess the previously mentioned observations, it would be useful to look in detail at how the static water level reacts to production and/or rainfall volumes in a well where there is a fairly complete set of data. The Chenoweth Co-op Wells #1, 2 and 3 provide about 300,000,000 gallons of water per year to customers. Most of the production is from Well #3, which is near The Dalles Racquet Club. Wells #1 and 2 are twins (drilled side by side) and are located a few city blocks from Well #3. The wells are completed in the Priest Rapids/Frenchman Springs basalts and are shown on Cross Section 22. They are very similar to the irrigation wells in Mill Creek (Cross Section 6), excepting that the water column in the Chenoweth wells is much smaller. The Chenoweth wells are part of the Dalles Critical Ground Water system.

The curves in Figure 14 cover a long time period during which production of water from these wells rose from about 200 million gallons per year to 300 million gallons per year. The first 13 years of production saw a rapid decline of about 50 feet in static water level. Over the next 30 years, static water level seemed to reflect the level of production rather than to decline. In 1975, production was estimated at about 250 million gallons/year. In 1994, production had risen to almost 300 million gallons/year and the stabilized water level dropped, but did not decline appreciably after the initial drop. A point of interest; the bulge in the static water level curve beginning in 1987 does not correlate with rainfall volume during or immediately before that time period.

A more detailed examination of well data is shown in Figure 15. The curves for water level, rainfall and production all seem to have a relationship (although due to time lag, it cannot be quantified easily). The peaks of rainfall, water level and the lowest production volume seem to occur at about the same time. Whether the responses on the water level curve are

due to rainfall or production recovery is difficult to say. It may be that both factors affect the water level in this well. It is notable that some of the recovery curves begin before the beginning of increased rainfall. This may mean that the shut in or low production period allows the water level to recover and that this water level increase may be primarily a build up rather than a response to new injection of water volumes after rainfall.

Another example of the water level response to water production volume in basalt aquifers occurs in a very different type of well; the domestic well #492 in Cross Section 26 shown previously in this report. This well had an original static water level of 186'. It was drilled in 1981 and only used intermittently for many years. For most of its early history, there were only a few wells in the section, all of which were domestic wells. In 1995, the next static water level measured was 201'. For most of that year, the water level stayed within one foot of that measure. At that point only one household was using the well on a full time basis. In late 1995, another household was added to the well system. The water level immediately dropped to 204'. Subsequent measures throughout 1996 remained very constant at or near that value.

The point of this discussion is that the specific stable static water level for a particular well may depend entirely on the volume extracted per unit time. If the volume produced is increased, the water will drop to a new equilibrium position. If the production volume is reduced, the water level will show an immediate return to a higher position. The amount of water that can be extracted depends on the porosity and permeability of the specific aquifer and the rocks above it. If the production volume exceeds the capacity of the well, the aquifer will fail in the vicinity of the wellbore, but a shut in period will allow it to recover.

#### DEEPENED WELLS

Wells which are deepened occur throughout the TLSA, but are most numerous in several areas. The common reasons that a well is deepened are

- land owner wishes to access a larger supply of water,
- the shallowest aquifer present shows a reduction in rate and static water level to the point where deepening the well is required to maintain water in the wellbore, or
- collapse and/or caving of the wellbore damages its ability to provide water

The second reason above has the most interest in the evaluation of ground water supply in the TLSA. A

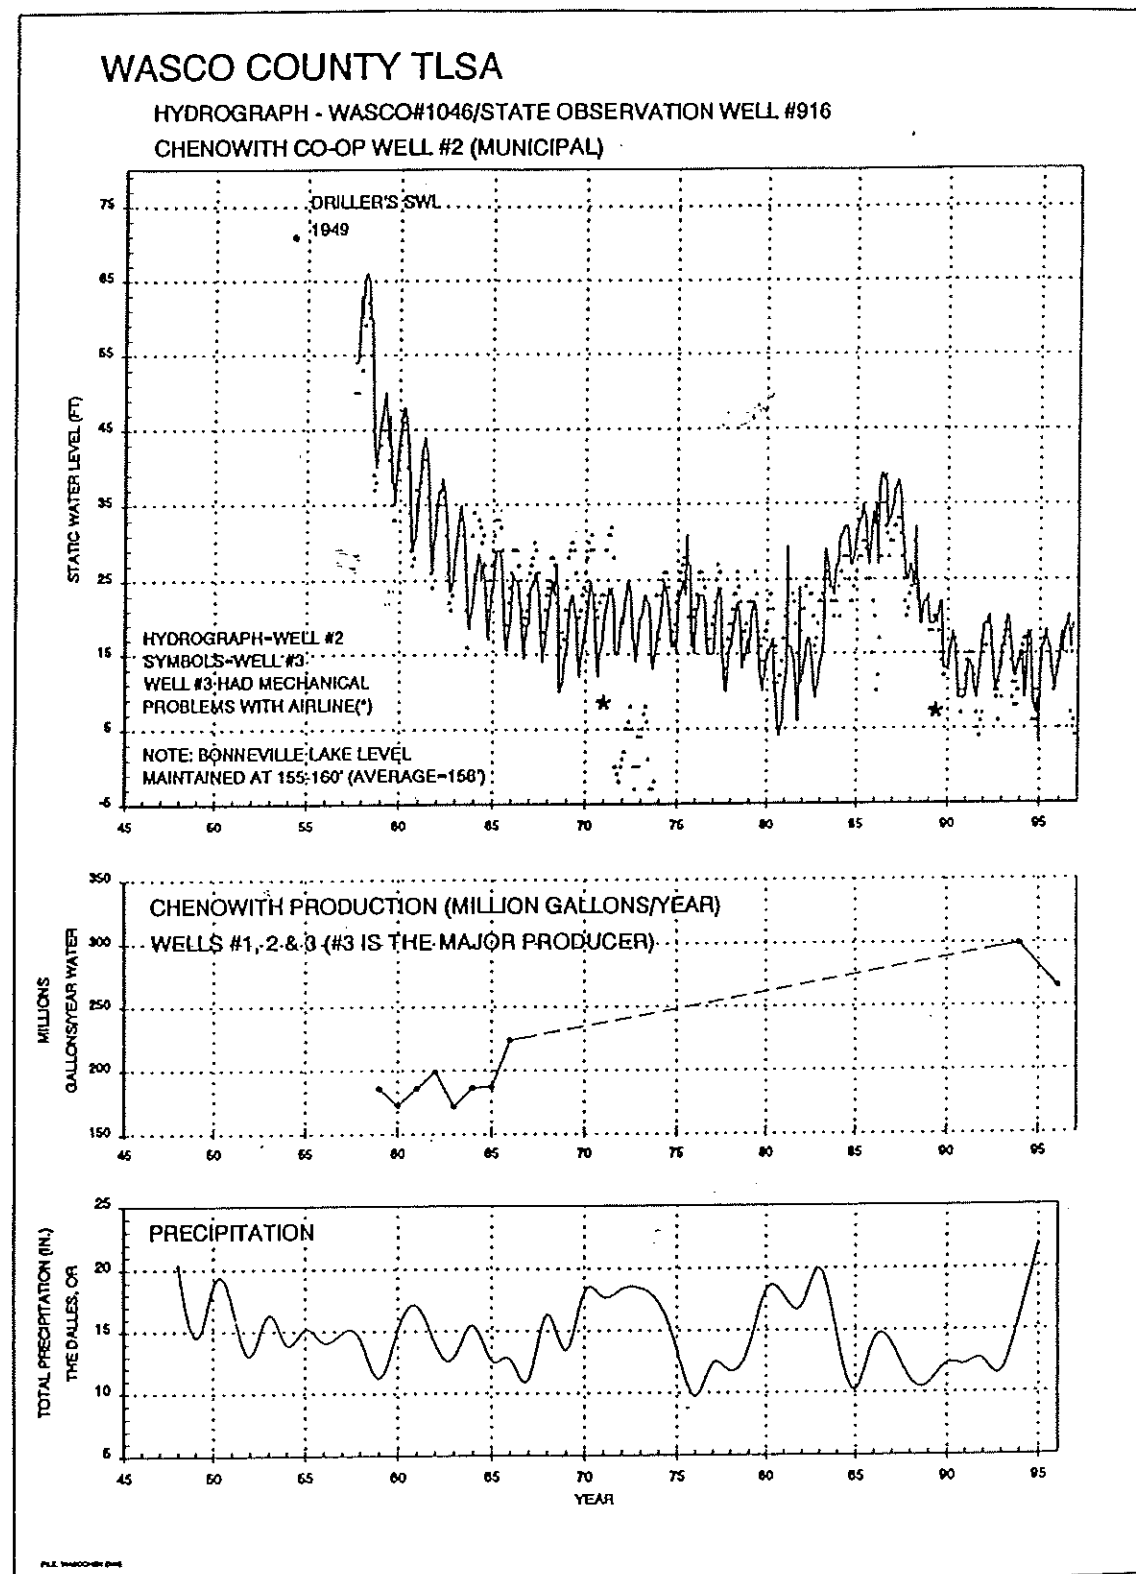

Figure 14. Chenowith Co-op water well data, 1949-1996.

Figure 15. Monthly detail, Chenoweth Co-op water well data, 1992-1996.

similar interest pertains in wells that have had multiple static water level measures over time and show significant decline in static water level (>30').

From the previous discussion on basalt aquifer initial decline, it is apparent that in many basalt wells enough water column must be available to accommodate the initial decline that many of them will experience. In many instances of deepened wells, the original well did not penetrate enough aquifer thickness to support water production over time. In these wells, deepening is required to more fully expose the aquifer system to the wellbore. In other instances, the entire system is abandoned and the well is deepened to a new aquifer system. It is now necessary to review available data and summarize how many wells of each type exist and the aquifers in which they tend to occur.

The 58 deepened wells examined may be categorized as follows:

- Minor (22 wells): 3 to 50 foot increase in well depth
  - repairs damage through caving or extended use
  - very little to no new aquifer thickness is exposed
  - static water level does not change
  - may be considered well rejuvenation
- Moderate (17 wells): 20 to 250 foot increase in well depth
  - repairs damage due to partial penetration
  - exposes more central part of aquifer system
  - static water level change is minor and remains within the same aquifer system
- Major (19 wells): 200 to 600 foot increase (or more) in well depth
  - abandonment of original aquifer system
  - static water level is 100 to 400 feet lower than in original well
  - represents a significant failure of shallowest aquifer system.

The deepened wells are listed in Table E ( Appendix A). Minor and moderate deepenings may be regarded as fairly normal occurrences in the development of a ground water resource. They are only of concern when the overall rate or percentage of them sharply increases over a particular time period. This may signal the stressing of the shallow ground water systems.

As is shown in Figure 16, deepenings in the TLSA area have occurred at a fairly constant percent of total wells drilled through the history of water well development. It should be noted that wells drilled during high rainfall cycles may have a tendency to be deepened more than wells drilled during normal or dry cycles.

Major deepenings are of serious concern. If no other explanation for them is identified, they signal failure of the shallow aquifer and depletion of the ground water resource. However, in the case of most of the major deepenings within the TLSA area, an explanation for failure can be demonstrated.

The following conditions may cause failure of the shallow aquifer. Each of them is illustrated by a cross section in Appendix B showing the condition described:

#### 1) POOR PERMEABILITY AND/OR POROSITY IN THE VICINITY OF THE WELLBORE

Aquifers are not uniform throughout their occurrence. For a variety of reasons, internal variation within them is normal and can be expected. In some areas, poor performance of an individual aquifer can be identified and mapped. A good example of this occurs in the northern part of the ridge between Mill Creek and Brown Creek and is shown in the northern end of Cross Section 5B. The Brown Creek-TDC2B aquifer (Dalles Group) is a frequently completed unit in this area. However, northeast of T1NR12E Section 11, it gains in clay content (clay lenses) to the point that in some cases, wells were not even completed in this zone, but were drilled deeper to the TDC1 aquifer. Other wells completed in this the TDC2B were later deepened, probably because of insufficient water volume. The TDC2B in this area also has the problems mentioned in #2 and #3 below.

#### 2) DESTRUCTION OF ORIGINAL AQUIFER CONDITIONS BY FRACTURING OR FAULTING

Faults and fractures can be very detrimental to aquifer performance in the following ways:

- Plugging of porous rock by deposits of minerals resulting in low porosity and permeability and poor interconnection with the main body of the aquifer.
- In contrast, fracturing may be seen as an enhancement to aquifer permeability in fault/fracture zones which are not mineralized. However, if it is extreme and continues to an adjacent canyon, fracturing can act as a drain, enhancing permeability to the point where the rock is no longer able to maintain high water volume.

Figure 16. Wells drilled and well deepenings versus time, TLSA, Wasco County.

The detrimental effect of fault/fracture zones can be seen in Cross Section 2 in the Sevenmile Hill area. Two wells in this section are abandoned after encountering no water. The driller's description in both wells indicates that mineralization has destroyed original aquifer quality by allowing mineral-bearing fluids to deposit material in available fractures and pore space. Away from the fault zones, the basalt aquifers here are quite acceptable in terms of rate and productive capability.

A rather serious condition occurs in T2NR12E Section 9 shown in Cross Section 9B. In this area, two major fault zones cross, one going east-west, the other trending northwest-southeast. Some wells in the vicinity of this intersection are either very deep originally, or have to be deepened to depths greater than 550 feet. The map on the following page shows trends of wells with drilling problems such as caving, fractures or lost circulation, dry holes, deepened wells and wells with very large declines (>100 feet) and the pattern of major fault and fracture zones identified on surface or in cross section. Figures 17, 18 and 19 are aerial photographs which show some of the features mapped as fault or fracture zones. The Wasco County Planning Office has complete aerial photo coverage in the TLSA for those who have an interest in this topic.

The presence of a fault or fracture zone is shown on the report cross sections as a vertical line. The faults in this general area are high-angle reverse, lateral or normal faults. If actual displacement is seen in cross section or in outcrop, the formations on either side of the fault line will be offset on the cross sections. A quick review of any selection of the cross sections will show how faults or fractures can depress static water levels in their vicinity.

### 3) WELL IS LOCATED TOO CLOSE TO THE MARGIN OF AN AQUIFER SYSTEM

In cross section 5B discussed previously, the TDC2B aquifer was becoming very shallow and close to its exposure at surface on adjacent slopes. Cross section 3 shows the Upper Dry Creek aquifer system (PRDC1) as it approaches its exposure on the slopes of Dry Creek valley. This aquifer system occurs in basalts immediately below the Dalles Group or in the base of the Dalles Group itself. Wells #726/714 and 713/715/2068 are on the margin of the system and their initial water columns are intermediate between the Root Road and Mosier Creek systems. These wells were deepened in 1986 and 1992, respectively, to the Mosier Creek system (elevation about 350-400 feet). If a well is drilled in a marginal position, it receives recharge from perhaps only about half the area of a

normal aquifer. In addition, diffuse recharge on slopes is probably less than diffuse recharge in flatter areas.

In all of the instances of major deepening, one or more of these conditions existed. The detrimental features described above all reduce the ability of an aquifer to gain recharge from the area surrounding it. In essence, these wells are deepened because they were produced at rates that exceeded their capacity to supply water. The aquifer conditions in each of them would not support water production at even low rates for an extended period of time.

Other conditions which may cause water level decline and lead to deepening are:

- Partial penetration of the upper part of an aquifer system. The Root well in Figure 11 is possibly affected by this condition.
- Damage caused by bacteria and/or deposition of fine sediment, both of which occlude porosity and permeability.
- The presence of ductile clays (often adjacent to basalt aquifers which can deform plastically over time. The result is an eventual "choking off" of the aquifer interval.
- Wells may also be affected by composite cones of depression, but this subject will be covered in the section below on well spacing.

In Figure 20 three unrelated wells are shown to illustrate an important problem. The Wilds well (T2NR12E Section 21) at the left, was deepened twice and now is at a depth of 799 feet. The two upper aquifers which have been subsequently abandoned were evidently of low quality. The 1995 measurement of static water level (NGS, Inc.) may be only apparent because the well measure also reported cascading water. What is certain is; the two upper zones could not support domestic requirements. This well is on trend with two dry holes, #753 and #4103, near one of the fault zones shown in the drilling hazard map. The third aquifer at the base of the well appears to be of higher quality than the other two. Other wells in the vicinity, including Wasco County Observation Well #743, appear to be stable and are about one half the depth of this well.

Also displayed in Figure 20 are two other wells in T2NR12E (Sections 16 and 9) which are abnormally deep for the area, and have abnormally low static water level elevations. It is this type of well which requires the most future investigation. There are many questions about such wells to be answered:

- Does the great depth to static water level reflect a restricted access to diffuse recharge?

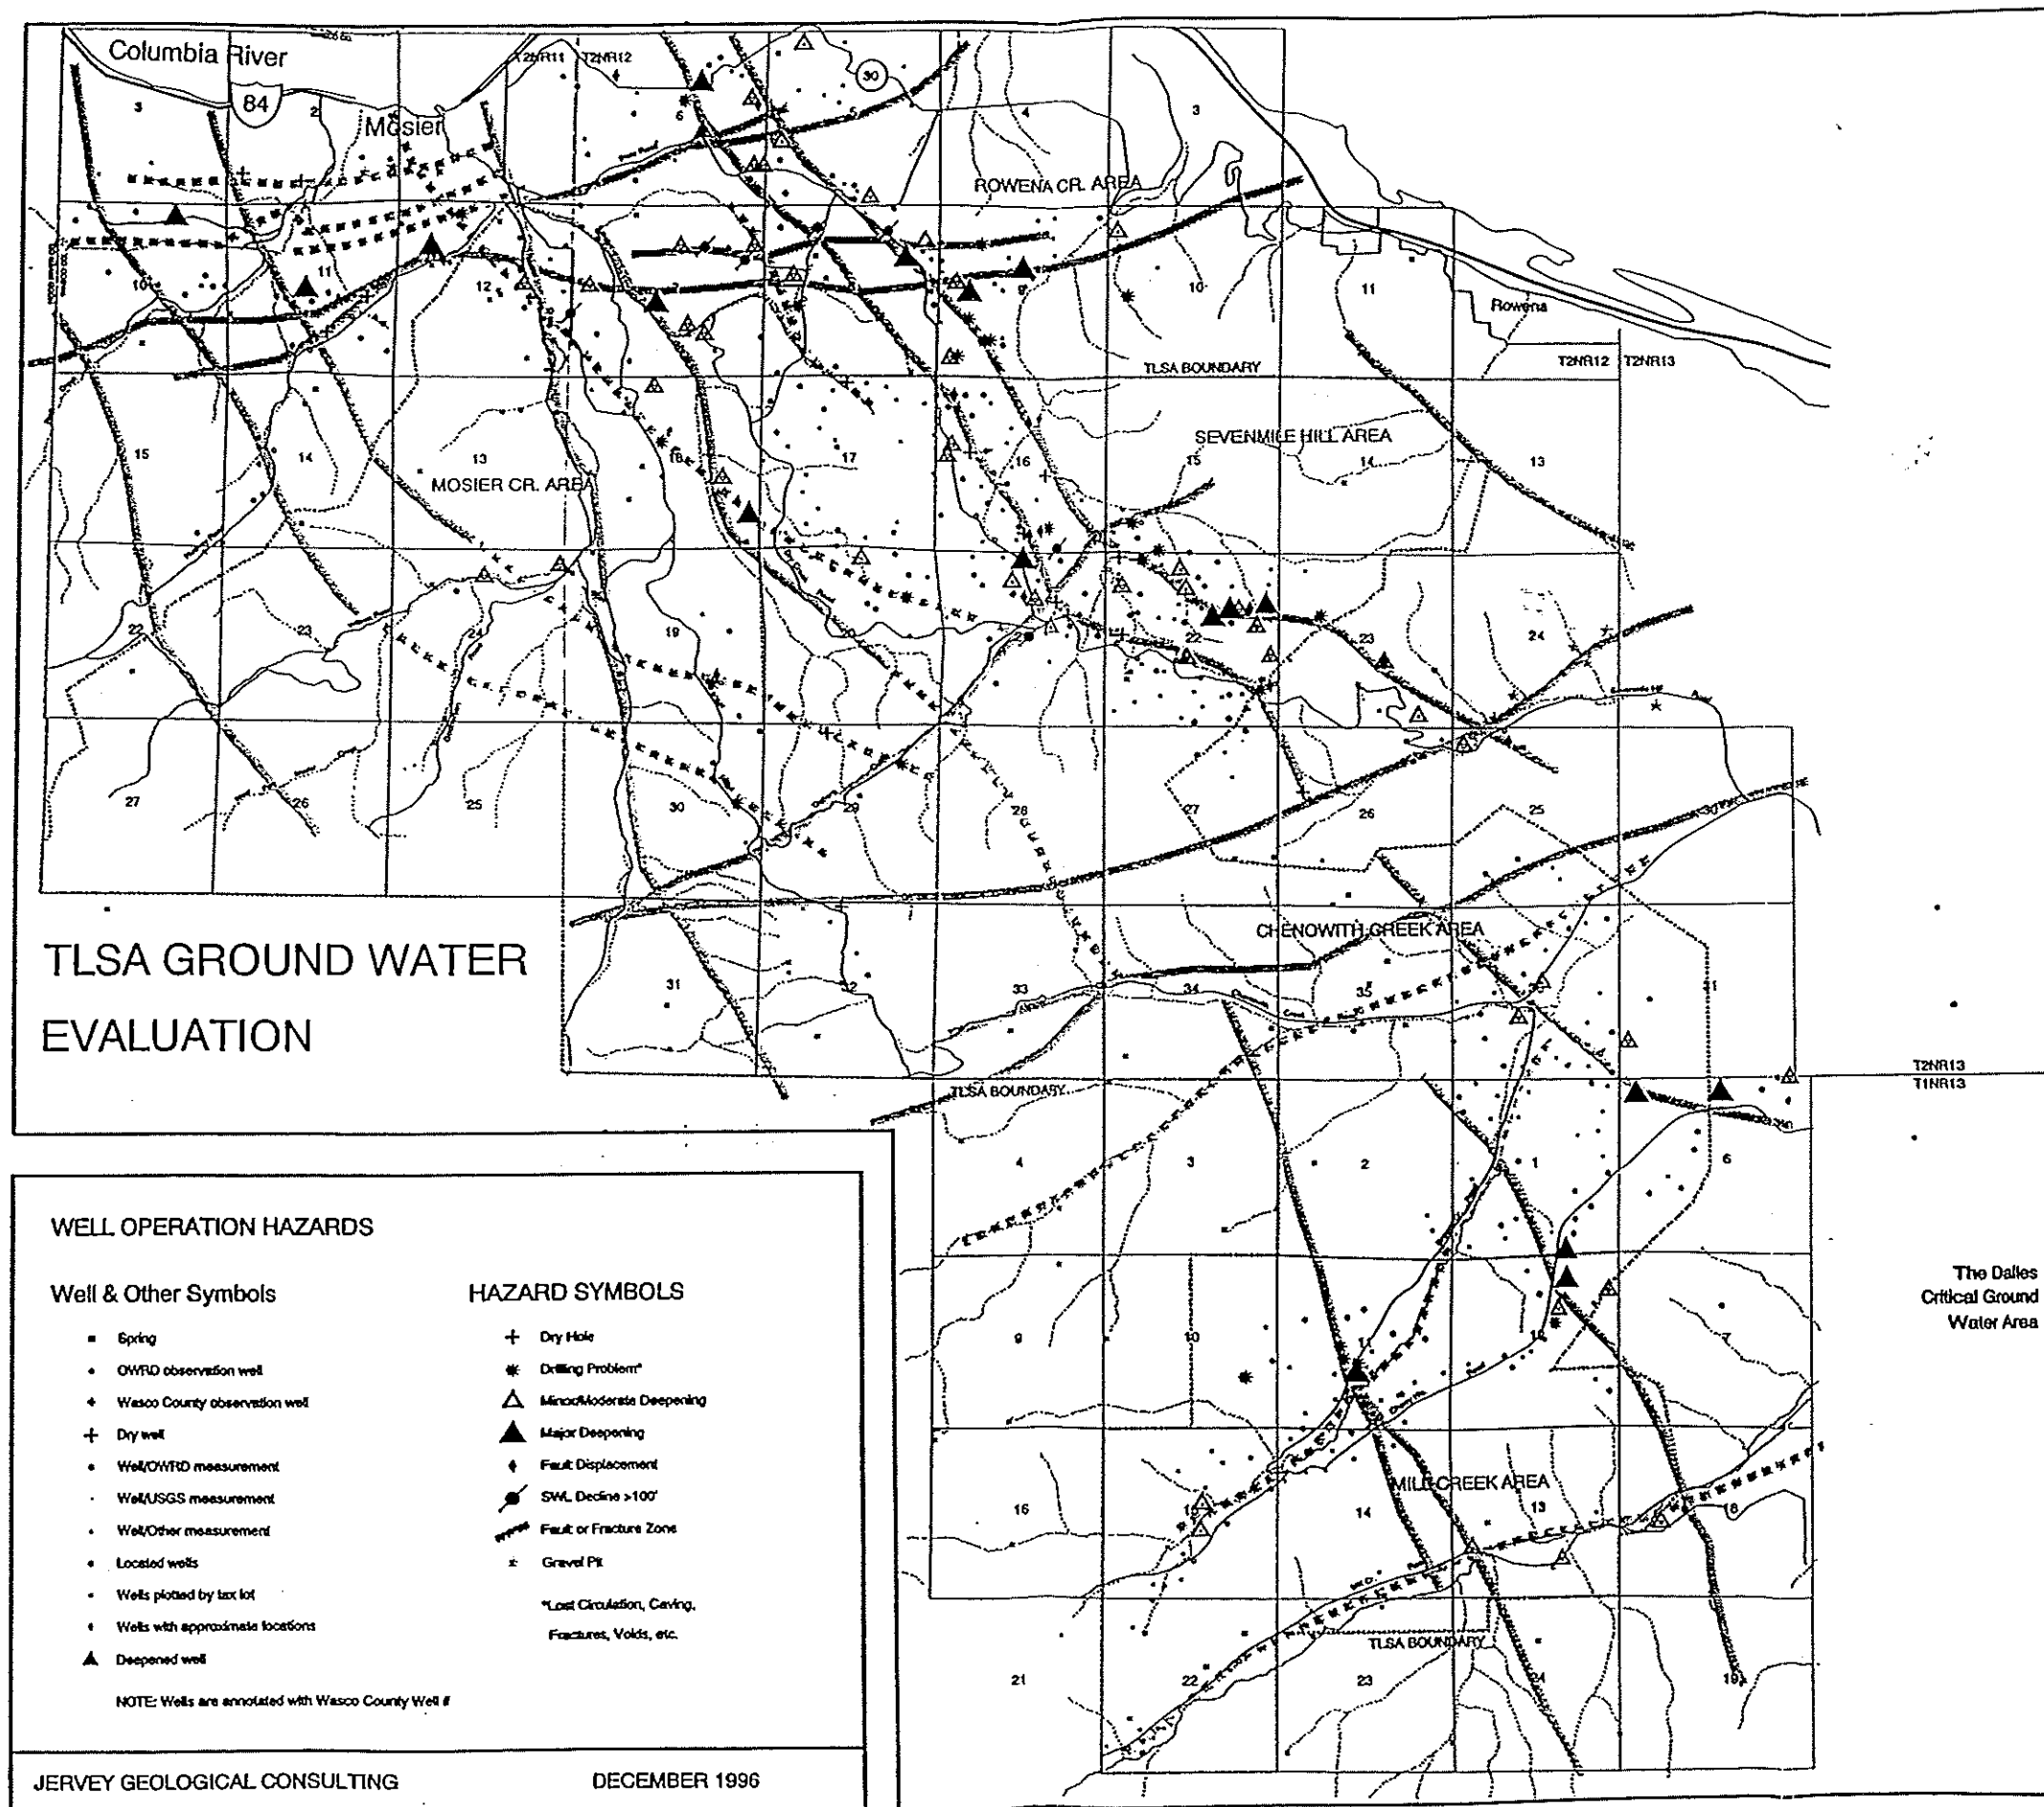

Figure 17. Aerial photograph showing fault zone near Cherry Heights Road, Wasco County, Oregon.

Figure 18. Aerial photograph showing fault zone visible from Interstate 84 at Rowena.

Figure 19. High altitude aerial photograph showing fault displacements, northern Wasco and Hood River Counties, Oregon.

Figure 20. Examples of deep wells with deep static water levels, TLSA, Wasco County.

- Are these wells stable in regard to static water level?
- Should areas with a high proportion of these wells have more restricted allowable well spacing?

To date, there are no hydrograph wells are very few multiple measures in this type of well. This issue will be discussed again in the report recommendations.

The problem for both individual land owners and for Wasco County is that the prediction of well performance is highly dependent on individual well conditions. The best course to follow under these circumstances is close monitoring of existing densely spaced and deep wells and pump testing in a variety of aquifers. The following discussion attempts to answer in part, how closely spaced wells may be for optimum performance.

#### WELL SPACING - DOMESTIC

The subject of appropriate well spacing is a controversial one. In order to clarify points made in this discussion, proper well spacing is defined as spacing required in order to allow good operation of a domestic well in the shallowest perennial aquifer available. High rate irrigation wells will be addressed separately at the end of this section.

Regardless of aquifer type, most wells outside of the agricultural areas of TLSA show similar characteristics of rate and capacity (5 to 60 gpm at 100% drawdown in one hour). Under these conditions, observations may be made about the area of influence of any individual low rate, low specific capacity domestic well.

Since production (pump) tests are not available, at the present time it is necessary to use other observations to estimate the area affected by a single domestic well. A review of the 28 cross sections in this report shows the minimum horizontal distance to outcrop that can be maintained by several typical TLSA aquifers. On average, most low rate aquifers (basalts and sandstones) can maintain a distance to outcrop of 300-400 feet before failure. This distance is approximately the radius that would be affected by these wells if they were at 100% drawdown. Under most conditions, wells are only operated at 60% or less of maximum drawdown. Ideally, then, on the average, minimum well spacing should be in the range of 360 to 500 feet. Well spacing closer than one half this range should be avoided.

This somewhat vague estimation can be supplemented by other data. The map on the following page shows areas (called units) where well spacing is dens-

est in the TLSA. These units can be important tools in planning for conservation of ground water resource.

Table 3 shows each unit, the aquifers present in its wells, well densities, age of wells and average well spacing and average of the closest one third well spacing. These areas can provide the best information possible to support ground water development (or limitations on development). It is obvious that current average well spacing is controlled by zoning. But in each unit, some wells are very closely spaced, and it is this group which should be used to direct future development.

Going back to the beginning of this report, clearly there is a wide spread of theoretical estimates of how much recharge might be available. There is no inexpensive way to determine by these methods an accurate estimate of recharge or discharge. The biggest problem is in accurately estimating the amount of recharge any individual aquifer can receive, not how much is available. The best sources of information about this subject are actual wells that have been operated successfully over a reasonable period of time at a particular well density.

#### REDUCE RISK BY USING EXISTING WELL SPACING AS A GUIDELINE

Table 3 shows that for the most part, the units considered appear to support one well per 10 acre spacing. In addition, there are wells that are more closely spaced and give guidelines about what possible minimum spacing could be supported.

From this information, a simple planning tool can be developed. For sections where aquifer type and performance are known and drilling density is highest, well spacing may be one well per 10 acres (optimum) without undue risk. Because there are indications that higher densities may be feasible, an additional 10% of locations may be at closer spacing, for a total of about 70 wells per section allowable, with a 10 acre optimum and a 5 acre minimum spacing. Obviously there should be flexibility in applying this as a guideline.

In sections which have few wells, and especially in such sections with deep wells and static water levels a more conservative guideline should be set. A suggestion is that this type of section be limited to twenty acre per well spacing until such time as more is known about aquifers present and their performance. When that well density is approached, a section or area can be reviewed to see if a closer spacing is feasible. Or, if enough data exists, to compare it with other more densely drilled areas, which may be used as a rationale to increase drilling density.

REVIEW WELL DATA AS MORE INFORMATION IS AVAILABLE

When sections or areas reach about the maximum density described above, further subdivision should be reviewed in view of well performance. If the wells over time have not responded adversely to the closest current spacing, a slight increase in well density may be prudent. On the other hand if well performance has negative warning flags new drilling (or subdivision) may be restricted.

At this point it would be extremely useful to look at analogs in other areas, if they exist. Comparable development in conditions of similar rainfall and in similar aquifer types would also be helpful in assessing risk of increased well density.

This type of process should be in a deliberate manner for the best and most successful result. If well drilling were to immediately proceed from no wells in a section to one or two acre density, many errors and some severe problems would be unavoidable. This type of risk is unacceptable both to county residents using ground water and county taxpayers who must pay for court costs incurred by the county to defend permitted subdivision.

The following recommendations can be made to assist Wasco County in planning ground water development:

- In the short term, the recommended and minimum spacing discussed previously could provide a guideline for planning.
- Guidelines should be reviewed periodically as new information may affect them.
- The unit areas indicated (or some version of them) should be the sites for further collection of data. At least two measured wells and several pump tests in each of them would be a goal for the next two years. This information could be used to further refine the estimated wells allowed per acre above.
- Most of this effort should be made by landowners as volunteered work. Wasco County may be able to coordinate the collection of data and verify it, but the manpower requirement to survey these units is onerous and perhaps not primarily the responsibility of the county. It is possible that interested individuals may be able to do a great deal more in the area of data collection

UNIT #	AQUIFER SYSTEM	TOTAL ACRES		AVERAGE WELL DISTANCE FEET	AVERAGE LOWER 1/3 WELL DISTANCE FEET	DENSEST ACRES PER WELL	PRIORITY

Table 3. Summary of well spacing in TLISA units.

than local or state government could afford to do.

- The effort above would have many positive rewards; one of the most important of these would be the emphasis on knowledge and control for the individual well owners. The more they know about their own situation and ground water as a whole, the better off the entire community will be.
- Continued effort on a number of fronts to improve well location accuracy; particularly important are dry holes, deepened wells and any wells with multiple static water level measurements.
- A manner of well naming so that one location would have one designation for all of its history. Many problems are caused by renumbering a well any time anything happens to it. The clerical problems this will create in the next ten to twenty years could be enormous.

The reason it is important to commit to this type of project is actually for the long term. At some point in future, one to two acre spacing for wells may be requested by development. At this extreme, it is best to use actual examples of well development to either permit or restrict denser drilling. Wasco County has done an exemplary job of data collection and should continue this effort.

#### WELL SPACING - IRRIGATION AREAS

Wells with high rates occur in the following areas: Mill Creek, Chenoweth Creek, Mosier Creek and adjacent orchard area. Wells with sustainable rates of greater than 60 gpm can, if operated continuously, easily affect water levels in areas of 1 to 5 square miles in the same aquifer system. In view of the possibility that these wells establish a more or less permanent cone of depression, it is probable that they have an impact on some domestic wells around them, if they are in the same aquifer system.

The cone of depression formed will, in the case of fracture controlled aquifers, not be circular but will have dimensions controlled by fracture trends. The domestic well owner should be aware of this and understand the possibility that his well may be affected by irrigation wells. For this and a variety of other reasons, production testing of a sampling of irrigation wells is strongly recommended in order to improve understanding of their performance characteristics and potential for interference over distance. This testing could also identify wells that have incurred significant damage over time, resulting in reduced rates. An

important relationship to develop would be the graph of well capacity versus radius of influence as a guideline to both irrigators and domestic well owners. This type of activity is probably best pursued by Oregon Water Resources Department.

The restriction of irrigation usage is not the domain of county regulation. However, the nomograph of capacity versus radius of influence should be used to control, at least to some extent, well spacing in irrigation wells. The detrimental effect of composite cones of depression could in many instances, be avoided with better information and spacing recommendations to water right holders. This matter has little to do with volume of water used; rather the proper and most efficient use of ground water available for irrigation.

#### WATER QUALITY

The evaluation of quality of ground water was not a primary goal of this report, however there are two general observations which may be made:

In the original TLSA questionnaire responses, more complaints were voiced about water quality than amount of water available. The most common objection was to water with high iron content and/or unpleasant odor. These wells are almost always located very close to fault or fracture zones. The ground water in them may be mixing with upward percolating warmer waters which also carry more minerals in solution. The most likely solution to this type of problem is in the purchase of equipment which will filter or remove offending minerals.

From the first section of this report, it may be surmised that septic fields might contaminate local water supplies in shallow aquifers. Periodic inexpensive testing for contamination is recommended to anyone concerned about this potential problem.

#### CONCLUSION

It is hoped that the information presented in this report will be helpful in the process of assessing the TLSA ground water resource. The current tendency toward higher precipitation offers an ideal time to gather data and learn more about TLSA aquifers. However, it is only a temporary reprieve from the average conditions that have to be incorporated into resource planning.

Many of the best observations and ideas in this report were based on comments by the TLSA Technical and Steering Committees, the interested public and the Wasco County Planning Staff. Together with well drillers and the local land owners, they can arrive at a reasonable approach to ground water development in the TLSA.

**ACKNOWLEDGEMENTS**

The people listed below were generous with ideas, suggestions and observations that are used in this study. The author wishes to thank them for their time and efforts.

**RESIDENTS/LAND OWNERS OF WASCO COUNTY:**

Sue Bennett	Carol Goter	Mark and Diane Mazeski
Frans Bosman	Wayne Haythorn	Sandra and Deane Preston

Exhibit B

Betzing Conditions

- 1) The permit shall allow one single family dwelling and attached garage only.
- 2) At a minimum all conditions required pursuant to the existing County ordinances regulating dwellings in RR-10 zone shall be applied as a condition of development.
- 3) The rear yard set back shall be the greater of 75 feet or the amount required by applicable County ordinance.
- 4) Betzing shall develop and maintain a water source which is capable of delivering water at the rate of 20 gallons per minute continuously for 50 minutes (1,000 gallons) on a year around basis.
- 5) Compliance with these conditions shall be checked though an on-site review by a qualified person selected by the County Planning Department.

### **Guide for Using Soil Surveys**

**GUIDE FOR USING SOIL SURVEY  
SINGLE PHASE INTERPRETATION SHEETS**

**PREPARED BY  
SOIL CONSERVATION SERVICE  
PORTLAND, OREGON  
JUNE 1982**

GUIDE FOR USING SOIL SURVEY  
SINGLE PHASE INTERPRETATION SHEETS IN OREGON

This guide contains a detailed explanation of the Single Phase Interpretation Sheets (SPI), the kinds of rating terms used, and the information presented on the sheets.

Single Phase Interpretation Sheets have been prepared for each kind of soil that has been mapped in the county. Each sheet has a brief description of each kind of soil, its properties, and predictions of its behavior for various uses.

This guide has the following sections:

- I. Narrative Soil Description
- II. Estimated Soil Properties
- III. Explanation of Rating Terms
- IV. Sanitary Facilities
- V. Building Site Development
- VI. Construction Material
- VII. Water Management
- VIII. Recreational Development
- IX. Capability and Predicted Yield - Crops and Pasture
- X. Woodland Suitability
- XI. Windbreaks
- XII. Wildlife Habitat Suitability
- XIII. Potential Native Plant Community
- XIV. Terms and Definitions of Restrictive Features  
Used on "SPI" Sheets
- XV. Glossary

I. NARRATIVE SOIL DESCRIPTION

At the top of each SPI sheet is the map symbol, county in which applicable, and the name of the soil for each area on the soil map which has that symbol in it. Below this is a brief paragraph which describes the nature and properties of the soil and tells where the soil is on the landscape.

## II. ESTIMATED SOIL PROPERTIES

The table, "Estimated Soil Properties," at the top of the sheet, gives estimates of properties, characteristics, and conditions which influence the behavior of the soil when used for different purposes.

COMMENTS THAT FOLLOW HELP EXPLAIN EACH COLUMN ON THE TABLE.

Depth from Surface. The layers shown here take into consideration those properties that influence plant growth and the engineering behavior of the soil.

Classification. Three systems of soil classification are shown in this table. The USDA texture is determined by the percent of sand (.05 to 2.0 millimeters), silt (.05 to .002 millimeter), and clay (below .002 millimeter) after the particles larger than 2 millimeters have been removed. Major soil textural classes are given such as sands, sandy loams, silt loam, clay loam, and clay. Presence of significant amounts of rock fragments is indicated by modifiers such as gravelly, shaly, cobbly, or stony. Muck, peat, mucky peat, and peaty muck are used for organic soils in place of the textural class names for mineral soils.

In the block indicating USDA texture, standard abbreviations are used to indicate texture. Up to three textures can be entered on each line. If more than one texture is used, they are separated by commas. If modifiers are used, they are attached to the texture by a hyphen, e.g., GR-SL. If a layer is stratified, SR is used as a modifier, and the end members of the textural range are connected by hyphens, e.g., SR-S-L or SR-S-GR-C. The following list of modifiers and textures may appear on the Single Phase Interpretation Sheets:

### Modifier:

BY	Bouldery	GR	Gravelly
BYV	Very bouldery	GRC	Coarse gravelly
BYX	Extremely bouldery	GRF	Fine gravelly
CB	Cobbly	GRV	Very gravelly
CBA	Angular cobbly	GRX	Extremely gravelly
CBV	Very cobbly	MK	Mucky
CBX	Extremely cobbly	PT	Peaty
CN	Channery	SH	Shaly
CNV	Very channery	SHV	Very shaly
CNX	Extremely channery	SHX	Extremely shaly
CR	Cherty	SR	Stratified
CRC	Coarse cherty	ST	Stony
CRV	Very cherty	STV	Very stony
CRX	Extremely cherty	STX	Extremely stony
FL	Flaggy	SY	Slaty
FLV	Very flaggy	SYV	Very slaty
FLX	Extremely flaggy	SYX	Extremely slaty

Texture or terms used in lieu of texture:

COS	Coarse sand	CE	Coprogenous earth
S	Sand	CEM	Cemented
FS	Fine sand	DE	Diatomaceous earth
VFS	Very fine sand	FB	Fibric material
LCOS	Loamy coarse sand	FRAG	Fragmental material
LS	Loamy sand	G	Gravel
LFS	Loamy fine sand	GYP	Gypsiferous material
LVFS	Loamy very fine sand	HM	Hemic material
COSL	Coarse sandy loam	ICE	Ice or frozen soil
SL	Sandy loam	IND	Indurated
FSL	Fine sandy loam	MARL	Marl
VFSL	Very fine sandy loam	MPT	Mucky-peat
L	Loam	MUCK	Muck
SIL	Silt loam	PEAT	Peat
SI	Silt	SG	Sand and gravel
SCL	Sandy clay loam	SP	Sapric material
CL	Clay loam	UWB	Unweathered bedrock
SICL	Silty clay loam	VAR	Variable
SC	Sandy clay	WB	Weathered bedrock
SIC	Silty clay	CIND	Cinders
C	Clay		

The Unified system is based on the identification of soils according to particle size, plasticity, liquid limit, and organic matter. Soils are grouped in 15 classes. There are eight classes of coarse-grained soils, identified as GW - well-graded gravel, GP - poorly graded gravel, GM - silty gravel, GC - clayey gravel, SW - well-graded sands, SP - poorly graded sands, SM - silty sands, and SC - clayey sands. There are six classes of fine-grained soils, identified as ML - inorganic silts, CL - inorganic clays (lean clays), OL - organic silts of low plasticity, MH - inorganic silts with high liquid limits, CH - inorganic clays of high plasticity (fat clays), and OH - organic clays of medium to high plasticity. There is one class of highly organic soils, identified as PT - peat and other highly organic soils.

The American Association State Highway Transportation Officials (AASHTO) system is used to classify soils according to those properties that affect use in highway construction and maintenance. In this system, a mineral soil is placed in one of the seven basic groups ranging from A-1 to A-7 on the basis of grain-size distribution, liquid limit, and plasticity index. In group A-1 are gravelly soils of high-bearing strength, or the best soils for subgrade (foundation). At the other extreme, in group A-7, are clay soils that have low strength when wet and that are poorest soils for subgrade. Highly organic soils (peat and muck) are classified in an A-8 group. These organic soils are unsuitable for use in embankments and subgrades. They are highly compressible and have low strength.

Coarse fragments over 3 inches refers to percent by weight of rock fragments. In the Unified and AASHTO systems, these fragments are not considered in the classification. However, it is necessary to know how much of the fragments are present in evaluating the class.

Percent of Material Passing various sieve sizes is determined on a weight basis. The number 4 sieve is 4.7 mm in diameter, the number 10 is 2.0 mm, the number 40 is 0.42 mm, and the number 200 is 0.074 mm. In the Unified system, the fines (silt and clay) are the material passing the number 200 sieve. Gravel is that material retained on the number 4 sieve. The amount retained on the number 200 sieve minus the gravel is the percent sand. In the AASHTO system, the material passing the number 200 sieve is clay and silt. Gravel is the material retained on the number 10 sieve. The amount retained on the number 200 sieve minus the gravel is the percent sand.

The figures shown under each sieve size are obtained either by laboratory test data or by estimates based on USDA textural classes.

Liquid limit and plasticity index indicate the effect of water on the strength and consistence of soil material. As the moisture content of a clayey soil is increased from a dry state, the material changes from a semisolid to a plastic state. If the moisture content is further increased, the material changes from a plastic to a liquid state. The plastic limit is the moisture content at which the soil material changes from a semisolid to a plastic state; and the liquid limit from a plastic to a liquid state. The plasticity index is the numerical difference between the liquid limit and the plastic limit. It indicates the range of moisture content within which a soil material is plastic.

Liquid limit and plasticity index are obtained either by engineering tests or by estimates of USDA texture and consistence. Assuming 15-bar water is known, liquid limit can be estimated as follows: 2 times 15-bar water percentage plus 10 equals liquid limit.

Clay is shown as a range of total clay as a percent of the less than 2 mm material for each horizon. Where clay is not applicable, such as in organic layers, no figures are shown.

Moist bulk density of the soil is the mass per unit volume of the <2 mm material at a moisture content near field capacity (1/3-bar in most soils). It excludes the mass of the liquid phase, and the volume over which the weight is determined includes interparticle space. It is expressed as grams per cubic centimeter or pounds per cubic foot.

Permeability is that quality of a soil that enables it to transmit water or air. Accepted as a measure of this quality is the rate at which soil transmits water while saturated. Permeability is estimated on the basis of those soil characteristics observed in the field, particularly structure and texture. The estimates do not take into account lateral seepage or such transient soil features as plowpans and surface crusts.

The following classes and rates are used:

<u>Permeability class</u>	<u>Numerical range (inches per hour)</u>
Very slow	Less than 0.06
Slow	0.06 - 0.2
Moderately slow	0.2 - 0.6
Moderate	0.6 - 2.0
Moderately rapid	2.0 - 6.0
Rapid	6.0 - 20.0
Very rapid	More than 20

Available water capacity is the ability of soils to hold water for use by most plants. It is commonly defined as the difference between the amount of water in the soil at field capacity and the amount at the wilting point of most crop plants. The values are reported as inches of water per inch of soil.

<u>Class</u>	<u>Inches/inch</u>
Very high	More than .20
High	.15 - .20
Medium	.10 - .15
Low	.05 - .10
Very low	Less than .05

Soil reaction is the degree of acidity or alkalinity of a soil, expressed in pH values. The pH values and terms used to describe soil reaction are as follows:

<u>Reaction description</u>	<u>pH range</u>
Extremely acid	Below 4.5
Very strongly acid	4.5 - 5.0
Strongly acid	5.1 - 5.5
Medium acid	5.6 - 6.0
Slightly acid	6.1 - 6.5
Neutral	6.6 - 7.3
Mildly alkaline	7.4 - 7.8
Moderately alkaline	7.9 - 8.4
Strongly alkaline	8.5 - 9.0
Very strongly alkaline	Above 9.0

Salinity of soils is based on the electrical conductivity of the saturation extract as expressed in millimhos per centimeter at 25°C. Electrical conductivity is related to the amount of salts more soluble than gypsum in the soil. High amounts of soluble salts in the soil affect plant growth and the corrosion of uncoated steel. A value of 2.0 or less would indicate a very slight limitation for crop production whereas a value of more than 16.0 would indicate a severe salinity problem for crop production. A dash is shown if salinity is no problem for growing plants.

<u>Class</u>	<u>Salinity</u> <u>(MMHOS/CM)</u>
1. Very slightly saline	0-4
2. Slightly saline	4-8
3. Moderately saline	8-16
4. Strongly saline	> 16

Shrink-swell potential is the relative change in volume to be expected of soil material with changes in moisture content, that is, the extent to which the soil shrinks as it dries out or swells when it gets wet. Extent of shrinking and swelling is influenced by the amount and kind of clay in the soil. Shrinking and swelling of soils causes much damage to building foundations, roads, and other structures. A high shrink-swell potential indicates a hazard to maintenance of structures built in, on, or with material having this rating.

The soil erodibility factor (K) used in the universal soil loss equation is a measure of the susceptibility of soil particles to detachment and transport by rainfall and runoff. Soil properties affecting soil erodibility are: soil texture (especially the percent of silt plus very fine sand), percent of sand greater than 0.10 mm, organic matter content, soil structure (type, grade), soil permeability, clay mineralogy, and rock fragments.

K values and classes used are as follows:

Low .00, .02, .05, .10, .15, .17, .20

Moderate .24, .28, .32, .37

High .43, .49, .55, .64

Soil loss tolerance (T), sometimes called permissible soil loss, is the maximum rate of soil erosion that will permit a high level of crop productivity to be sustained economically and indefinitely. T values of 1 through 5 are used. The numbers represent the permissible tons of soil loss per acre per year where food, feed, and fiber plants are grown. T values are not applicable to construction sites or to other nonfarm uses of the erosion equation.

A wind erodibility group consists of soils having the same potential for soil blowing. The properties that affect soil blowing are those that affect the stability of the aggregates against breakdown by tillage and abrasion from wind. These properties are texture, organic matter, calcium carbonate content, mineralogy and perhaps others such as freezing and thawing, or wetting and drying. Texture of the surface inch of soil has the greatest single influence on soil erodibility and is used as a guide for estimating wind erodibility groups. There are seven groups with group 1 being the most susceptible to soil blowing and group 7 being the least susceptible.

In parts of the state where wind erosion is not considered to be a problem, a dash is entered for the surface layer.

Organic matter percentage is shown in the surface layer. Whole numbers are used from 1 and above, tenths from 1 to .5, and <.5 below .5, e.g., <.5-1, 2-5.

Corrosivity pertains to potential soil-induced chemical action that dissolves or weakens uncoated steel or concrete. Rate of corrosion of uncoated steel is related to soil properties such as drainage, texture, total acidity, electrical resistivity, and electrical conductivity of the soil material. Corrosivity for concrete is influenced mainly by the content of sodium or magnesium sulfate but also by soil texture and acidity. Installations of uncoated steel that intersect soil boundaries or soil horizons are more susceptible to corrosion than installations entirely in one kind of soil or in one soil horizon. Corrosivity is rated for the whole soil rather than for each horizon. A corrosivity rating of low means that there is a low probability of soil-induced corrosion damage. A rating of high means that there is a high probability of damage, so that protective measures for steel and more resistant concrete should be used to avoid or minimize damage.

Flooding is given in terms of frequency, duration, and months. Duration and months that floods are likely to occur are given only for soils that flood more frequently than rare. Following is a brief explanation.

Frequency:	None	(No reasonable possibility of flooding)
	Rare	(Flooding unlikely but possible under abnormal conditions)
	Common	(Flooding likely under normal conditions)
		Occasional (Less often than once in 2 years)
		Frequent (More often than once in 2 years)
Duration:	Very brief	(Less than 2 days)
	Brief	(2 days to 7 days)
	Long	(7 days to 1 month)
	Very long	(More than 1 month)
Months:	These are the months of probable flooding.	

Water table is given in terms of depth, kind, and months. The depth range of a seasonally high water table is given to the nearest half foot. If the water table is below 6 feet or if the water table exists for less than 1 month, the value greater than 6 (6.0) is used. Kinds of water table listed are: apparent, perched, or artesian. The months shown are those within which the water table is likely to be within the ranges given in the depth column.

A cemented pan prevents or restricts root and water penetration. These include duripan, petrocalcic, orstein and other cemented layers. "Thin" indicates the layer is thin enough that excavation can be made with common construction equipment for pipelines and other excavations. "Thick" indicates that special equipment or blasting can be expected to be necessary. A dash indicates a pan does not occur above a 60-inch depth.

Bedrock prevents or restricts root and water penetration. "Soft" rock can be excavated using trenching machines, backhoes, and other equipment common to making excavations. "Hard" rock requires blasting or use of special equipment above what is considered normal. The normal depth of observation is about 60 inches.

Subsidence is induced when organic soils or other wet soils are drained and is expressed in inches.

Hydrologic soil groups are used to estimate runoff from rainfall. Soil properties are considered that influence the minimum rate of infiltration obtained for a bare soil after prolonged wetting. These properties are: depth of seasonally high water table, intake rate and permeability after prolonged wetting, and depth to a very slowly permeable layer. The influence of ground cover is treated independently--not in hydrologic soil groups.

The soils are classified into four groups, A, B, C, and D with Group A having the lowest runoff potential and Group D having the highest runoff potential.

Group A soils have low runoff potential and high infiltration rates even when thoroughly wetted. They consist chiefly of deep, well to excessively drained sands or gravel. These soils have a high rate of water transmission.

Group B soils have moderately low runoff potential and moderate infiltration rates when thoroughly wetted. They consist chiefly of moderately deep to deep, moderately to well drained soils with moderately fine to moderately coarse textures and moderately slow to moderately rapid permeability. These soils have a moderate rate of water transmission.

Group C soils have moderately high runoff potential and slow infiltration rates when thoroughly wetted. They consist chiefly of soils with a layer that impedes downward movement of water, soils with moderately fine to fine texture, soils with slow infiltration due to salts or alkali, or soils with moderate seasonal water tables.

These soils may be somewhat poorly drained. They include well and moderately well drained soils with slowly and very slowly permeable layers such as fragipans, hardpans, hard bedrock and the like at depths of 20 to 40 inches. These soils have a slow rate of water transmission.

Group D soils have high runoff potential and very slow infiltration rates when thoroughly wetted. They consist chiefly of clay soils with a high swelling potential, soils with a permanent high water table, soils with a claypan or clay layer at or near the surface, soils with very slow infiltration due to salts or alkali, and shallow soils over nearly impervious material. These soils have a very slow rate of water transmission.

Potential frost action is the likelihood of upward or lateral expansion of soil (frost heave) because of the formation of segregated ice lenses and the subsequent loss of strength and collapse on thawing. Daily freezing and thawing that tends to lift the crowns of plants out of the group is not included because it does not contribute to the large movement produced by formation of ice lenses.

In areas where potential frost action is not common, such as west of the Cascade Mountains, no interpretations for potential frost action are made.

Where frost action is a potential problem, three classes are used as follows:

- |          |  |
|----------|--|
| Low      | Soils rarely subject to the formation of ice lenses.   |
| Moderate | Soils susceptible to the formation of ice lenses, resulting in frost heave and subsequent loss of strength.        |
| High     | Soils highly susceptible to the formation of ice lenses, resulting in frost heave and subsequent loss of strength. |

### III. EXPLANATION OF RATING TERMS

The soil is also rated for selected uses expected to be important or potentially important to the user. Ratings are given in terms of limitations and suitability. Up to three of the most restrictive features are listed. There may be other features that need to be treated to overcome soil limitations for a specific purpose.

For some uses, degrees of soil limitations are used. The rating terms used are SLIGHT, MODERATE, and SEVERE. For other uses, degrees of soil suitability are used. The rating terms used are GOOD, FAIR, and POOR. Up to three restrictive features are listed if the degree of limitation is more than SLIGHT or if the degree of suitability is less than GOOD.

#### Limitation Ratings:

Slight soil limitation is the rating given soils that have properties favorable for the rated use. This degree of limitation is minor and can be overcome easily. Good performance and low maintenance can be expected.

Moderate soil limitation is the rating given soils that have properties moderately favorable for the rated use. This degree of limitation can be overcome or modified by special planning, design, or maintenance. During some part of the year, the performance of the structure or other planned use is somewhat less desirable than for soils rated slight. Some soils rated moderate require treatment such as artificial drainage, runoff control to reduce erosion, extended sewage absorption fields, extra excavation, or some modification of certain features through manipulation of the soil. For these soils, modification is needed for those construction plans generally used for soils of slight limitation. Modification may include special foundations, extra reinforcements, sump pumps, and the like.

Severe soil limitation is the rating given soils that have one or more properties unfavorable for the rate used, such as steep slopes, bedrock near the surface, flooding hazard, high shrink-swell potential, a seasonal high water table, or low bearing strength. This degree of limitation generally requires major soil reclamation, special design, or intensive maintenance. Some of these soils, however, can be improved by reducing or removing the soil feature that limits use; but, in many situations, it is difficult and costly to alter the soil or to design a structure to compensate for a severe degree of limitation.

#### Suitability Ratings:

A rating of good means the soils have properties favorable for the use. Good performance and low maintenance can be expected.

A rating of fair means the soil is generally favorable for the use. One or more soil properties make these soils less desirable than those rated good.

A rating of poor means the soil has one or more properties unfavorable for the use. Overcoming the unfavorable property requires special design, extra maintenance, or costly alteration.

#### IV. INTERPRETATIONS FOR SANITARY FACILITIES

Septic tank absorption fields. A septic tank absorption field is a soil absorption system for sewage disposal. It is a subsurface tile or perforated pipe system laid in such a way that effluent from the septic tank is distributed with reasonable uniformity into the natural soil.

Criteria used for rating soils (slight, moderate, and severe) for use as absorption fields are based on the limitations of the soil to absorb effluent. Important features affecting this use are permeability, depth to a seasonal water table, flooding, slope, depth to bedrock or hardpan, stoniness, and rockiness.

Sewage lagoons. A sewage lagoon (aerobic) is a shallow lake used to hold sewage for the time required for bacterial decomposition. The requirements for this embankment are the same as for other embankments designed to impound water. (See embankments, dikes, and levees.)

Soil requirements for basin floors of lagoons are slow rate of seepage, even surface of low gradient and low relief, and little or no organic matter.

Sanitary landfill. Because trenches as deep as 15 feet or more are used for many landfills, geologic investigation is needed to determine the potential for pollution of ground water by leachates as well as to ascertain the design needed. Soil survey borings commonly are limited to depths of 5 or 6 feet; however, for some soils, properties can be predicted with reasonable confidence below such depths. Predictions relative to probable depth to a seasonal high water table or to bedrock can be useful in planning for detailed investigation.

Sanitary landfill (trench-type). This type of landfill is a dug trench in which refuse is buried daily and the refuse is covered with a layer of soil material at least 6 inches thick. The material used for covering is the soil excavated in digging the trench. When the trench is full, a final cover of soil material at least 2 feet thick is placed over the landfill. Important features affecting trench-type sanitary landfills are depth to a seasonal high water table, flooding, permeability, slope, texture, depth to bedrock or hardpan, stoniness and rockiness.

Sanitary landfill (area-type). In this type of landfill, refuse is placed on the surface of the soil in successive layers. The soil used for daily and final cover generally must be hauled in from elsewhere. A final cover of soil material at least 2 feet thick is placed over the fill when it is completed. Important features affecting this type of landfill are depth to a seasonal high water table, flooding, permeability, and slope.

Daily cover for area-type landfill generally must be obtained from a source away from the site. Suitability of a soil for use as daily cover is based on properties that reflect workability such as slope, wetness, ease of digging, moving, and spreading the soil during both wet and dry periods. Thickness of suitable soil material will determine the supply. Some damage to borrow area is expected, but if revegetation and erosion control could become serious problems in that area, the soil is rated as poor for use as cover material for fills.

## V. BUILDING SITE DEVELOPMENT

Shallow excavations are those that require digging or trenching to a depth of less than 6 feet. Important features affecting excavations are a seasonally high water table, flooding, slope, soil texture, depth to bedrock or other cemented layer, stoniness, and rockiness.

Dwellings with and without basements, as considered here, are for structures not more than 3 stories high that are supported by foundation footings placed in undisturbed soil. The features that affect the rating of a soil for dwellings are those that relate to capacity to support load and resist settlement under load, and those that relate to ease of excavation. Soil properties that affect capacity to support load are wetness, susceptibility to flooding, density, plasticity, texture, and shrink-swell potential. Those that affect excavation are wetness, slope, depth to bedrock, and content of stones and rocks.

Small commercial buildings, as considered here, have the same requirements and features as described for dwellings. The main difference for commercial buildings is a reduction of slope limits for each limitation class. Canneries, foundries, and the like are not considered here because foundation requirements generally would exceed those of ordinary 3-story dwellings.

Local roads and streets, as rated here, have an allweather surface expected to carry automobile traffic all year. They have a subgrade of underlying material; a base consisting of gravel, crushed rock, or soil material stabilized with lime or cement; and a flexible or rigid surface, commonly asphalt or concrete. These roads are graded to shed water and have ordinary provisions for drainage. They are built mainly from soil at hand, and most cuts and fills are less than 6 feet deep.

Soil properties that most affect design and construction of roads and streets are load-supporting capacity and stability of the subgrade, and the workability and quantity of cut and fill material available. The AASHTO and Unified classifications of the soil material, and also the shrink-swell potential, indicate traffic-supporting capacity. Wetness and flooding affect stability of the material. Slope, depth to hard rock or cemented layers, content of stones and rocks, and wetness affect ease of excavation and amount of cut and fill needed to reach an even grade.

Lawns, Landscaping, and Golf Fairways. The soils are rated for their use in establishing and maintaining turf for lawns and golf fairways, and ornamental trees and shrubs for residential type landscaping. The ratings are based on the use of soil material at the location with some land smoothing. Irrigation may or may not be needed and is not a criteria for rating. Traps, trees, roughs, or greens are not considered as part of the golf fairway.

The properties considered are those that affect plant growth and trafficability after establishing vegetation. The properties that affect plant growth are the content of salt, sodium and sulfidic materials, soil reaction, depth to water table, depth to bedrock or cemented pan, and the available water capacity of the upper 40 inches of soil. The properties that affect trafficability after vegetation is established are flooding, wetness, slope, stoniness, and the amount of clay, sand or organic matter in the surface layer.

## VI. CONSTRUCTION MATERIAL

This section gives the suitability of the soil as source material for construction purposes.

Suitability ratings of good, fair, or poor are given for soils used as a source of roadfill and topsoil. Ratings of probable and improbable are given for sand and gravel.

A rating of probable means that on the basis of the available evidence, the source material is likely to occur in or below the soil. A rating of improbable means that the source material is unlikely to occur within or below the soil. This rating does not consider the quality of the source material because quality depends on how the source material will be used.

Roadfill is soil material used in embankments for roads. The suitability ratings reflect (1) the predicted performance of soil after it has been placed in an embankment that has been properly compacted and provided with adequate drainage, and (2) the relative ease of excavating the material at borrow areas.

Good or fair roadfill material is rated poor where the depth to bedrock or hardpan is less than about 3 feet.

Sand. Sand as a construction material is usually defined as the size of particles ranging from .074 mm (sieve #200) to 4.76 mm (sieve #4) in diameter. Sand is used in greater quantities in many kinds of construction. Specifications for each purpose vary widely. The intent of this rating is to show only the probability of finding material in suitable quantity. The suitability of the sand for specific purposes is not evaluated.

The properties used to evaluate the soils as a probable source for sand are the grain size as indicated by the Unified Soil Classification, the thickness of the sand layer, and the amount of rock fragments in the soil material.

If the lowest layer of the soil contains sand, the soil is rated as a probable source regardless of thickness. The assumption is that the sand layer below the depth of observation exceeds the minimum thickness.

Gravel. Gravel as a construction material is defined as the size of particles ranging from 4.76 mm (sieve #4) to 76 mm (3 inches) in diameter. Gravel is used in great quantities in many kinds of construction. Specifications for each purpose vary widely. The intent of this rating is to show only the probability of finding material in suitable quantity. The suitability of the gravel for specific purposes is not evaluated.

The properties used to evaluate the soil as a probable source for gravel are grain size as indicated by the Unified Soil Classification, the thickness of the gravel layer and the amount of rock fragments in the soil material. If the lowest layer of the soil contains gravel, the soil is rated as a probable source regardless of thickness. The assumption is that the gravel layer below the depth of observation exceeds the minimum thickness.

Topsoil is used for topdressing an area where vegetation is to be established and maintained. Suitability is affected mainly by ease of working and spreading the soil material, as for preparing a seedbed; response of plants when fertilizer is applied; absence of substances toxic to plants; and absence of high amounts of soluble salts or alkali.

Texture of the soil material and its content of stone fragments are characteristics that affect suitability, but also considered in the ratings is damage that will result at the area from which topsoil is taken.

## VII. WATER MANAGEMENT

Pond reservoir areas hold water behind a dam or embankment. Features affecting this use are permeability, depth to bedrock, and depth to cemented pan.

Embankments, dikes, and levees are earthfills designed to hold back water. Features affecting these uses are shear strength, compressibility, permeability of the compacted soil, susceptibility to piping, compaction characteristics, shrink-swell potential, and stoniness. Ratings given apply only to small, homogeneous embankments.

Excavated ponds aquifer fed are bodies of water created by excavating a pit or dugout. Excavated ponds may be divided into two types: those fed by ground water aquifers and those fed by surface runoff. Rated here are those fed by aquifers. Excluded are ponds fed by runoff and also embankment-type ponds where the depth of water impounded against the embankment exceeds 3 feet. The assumption is made that the pond is properly designed, located, and constructed, and that the water is of good quality.

Soil properties affecting aquifer-fed ponds are the existence of a permanent water table, permeability of the aquifer, and properties that interfere with excavation--stoniness and rockiness.

Drainage of cropland and pasture is affected by such soil features as permeability; depth to bedrock, cemented pan, fragipan, claypan, or other layers that influence rate of water movement; depth to seasonal water table; slope; stability of ditchbanks; susceptibility to flooding or ponding; salinity or alkalinity; and availability of outlets for drainage.

Irrigation suitability of a soil is affected by such features as slope; susceptibility to stream overflow; water erosion or soil blowing; soil texture; content of stones; accumulations of salts and alkali; depth of root zone; rate of water intake at the surface; permeability of soil layers below the surface layer and in fragipans or other layers that restrict movement of water; amount of water held available to plants; and need for drainage, or depth to water table.

Terraces and diversions are embankments or ridges constructed across the slope to intercept runoff so that it soaks into the soil or flows slowly into a prepared outlet. Features affecting these uses are percent, length, and shape of slope; depth to bedrock or other unfavorable material; presence of stones; permeability; hazards to water erosion, soil blowing, and soil slipping; availability of outlets; and ease or difficulty in the establishment of vegetation.

Grassed waterways are constructed waterways or outlets shaped or graded and established in suitable vegetation as needed for the safe disposal of runoff from a field, diversion, terrace, or other structure. Soil features affecting this use are slope, susceptibility to erosion, drouthiness, excess alkali and salt, permeability, rooting depth, rock outcrops, stoniness, wetness, and ease or difficulty in the establishment of vegetation.

#### VIII. RECREATIONAL DEVELOPMENT

Knowledge of soils is necessary in planning, developing, and maintaining areas used for recreation. In this section the soils are rated according to limitations that affect their suitability for camp areas, playgrounds, picnic areas, and paths and trails.

Camp areas are used intensively for tents and small camp trailers and the accompanying activities of outdoor living. Little preparation of the site is required other than shaping and leveling for tent and parking areas. Camp areas are subject to heavy foot traffic and limited vehicular traffic. Soil features affecting this use are wetness, flooding during the season of use, permeability, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

Playgrounds are areas used intensively for baseball, football, badminton, and similar organized games. Soils suitable for this use need to withstand intensive foot traffic. Soil features affecting this use are wetness, flooding during season of use, permeability, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, dustiness, and depth to bedrock.

Picnic areas are attractive natural or landscaped tracts used primarily for preparing meals and eating outdoors. These areas are subject to heavy foot traffic. Most of the vehicular traffic, however, is confined to access roads. Soil features affecting this use are wetness, flooding during the season of use, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

Paths and trails are used for local and cross country travel by foot or horseback. Design and layout should require little or no cutting or filling. Soil features affecting these uses are wetness, flooding during season of use, slope, surface soil texture, amount of pebbles, cobbles, or stones on the surface, presence of rock outcrops, and dustiness.

#### IX. CAPABILITY AND PREDICTED YIELDS - CROPS AND PASTURE

Capability grouping shows, in a general way, the suitability of soils for most kinds of field crops. The groups are made according to the limitations of the soils when used for field crops, the risk of damage when they are used, and the way they respond to treatment. The grouping does not take into account major and generally expensive landforming that would change slope, depth, and other characteristics of the soil; does not take into consideration possible but unlikely major reclamation projects; and does not apply to rice, cranberries, horticultural crops, or other crops requiring special management.

Those familiar with the capability classification can infer from it much about the behavior of the soils when used for other purposes, but this classification is not a substitute for interpretations designed to show suitability and limitations of groups of soil for range, for forest trees, or for engineering.

In the capability system, all kinds of soils are grouped at three levels: the capability class, subclass, and unit. The capability unit is a grouping of soils into a defined management unit which is not provided on the SPI sheet.

Capability classes - The broadest groups are designated by Roman numerals I through VIII. The numerals indicate progressively greater limitations and narrower choices for practical use, defined as follows:

Class I soils have few limitations that restrict their use.

Class II soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class III soils have severe limitations that reduce the choice of plants, require special conservation practices, or both.

Class IV soils have very severe limitations that reduce the choice of plants, require very careful management, or both.

Class V soils are not likely to erode but have other limitations, impracticable to remove, that limit their use largely to pasture, range, woodland, or wildlife.

Class VI soils have severe limitations that make them generally unsuited to cultivation and limit their use largely to pasture or range, woodland, or wildlife.

Class VII soils have very severe limitations that make them unsuited to cultivation and that restrict their use largely to pasture or range, woodland, or wildlife.

Class VIII soils and landforms have limitations that preclude their use for commercial plants and restrict their use to recreation, wildlife, water supply, or to esthetic purposes.

Capability subclasses are soil groups with one class; they are designated by adding a small letter--e, w, s, or c--to the class numeral, for example, IIe. The letter e shows that the main limitation is risk of erosion unless close-growing plant cover is maintained; w shows that water in or on the soil interferes with plant growth or cultivation (in some soils the wetness can be partly corrected by artificial drainage); s shows that the soil is limited mainly because it is shallow, drouthy, or stony; and c, used in only some parts of the United States, shows that the chief limitation is climate that is too hot, too cold, or too dry for production of many crops.

In Class I there are no subclasses because the soils of this class have few limitations. Class V can contain, at the most, only the subclasses indicated by w, s, and c because the soils in Class VI are subject to little or no erosion though they have other limitations that restrict their use largely to pasture, range, woodland, or recreation.

Capability classes and subclasses are given for both nonirrigated and irrigated conditions.

Yields are given for nonirrigated or irrigated conditions or both depending on the use of the particular soils. These are predicted average acre yields obtainable under a high level of management. A high level of management consists of farming practices that research, field trials, and experience indicate produce the highest net returns.

## X. WOODLAND SUITABILITY

This section deals with the potential productivity and management problems in the use of the soils for woodland production.

The species listed in the column for potential productivity of common trees is the one for which site index is given. Site index is an indication of potential productivity and is based on the average total height of the dominant and codominant trees in the stand at the age of 100 years.

Dominant and codominant Douglas-fir (coast) trees growing in a well-stocked stand on site class 1 soils will reach a height of 186 feet or more at the age of 100 years; those on site class 2 soils will reach heights of 156 to 185 feet; those on site class 3 soils, heights of 126 to 155 feet; those on site class 4 soils, heights of 96 to 125 feet; and those on site class 5 soils, heights of 95 feet or less.

Seven site classes are used for ponderosa pine. Site class 1 soils will reach a height of 113 feet or more at age of 100 years; those on site class 2 soils will reach heights of 99 to 112 feet; those on site class 3 soils, heights of 85 to 98 feet; those on site class 4 soils, heights of 71 to 84 feet; those on site class 5 soils, heights of 57 to 70 feet; those on site class 6 soils, heights of 43 to 56 feet; and those on site class 7 soils, heights of less than 43.

Douglas-fir (interior) growing on site class 1 soils will reach a height of 86 feet or more at the age of 50 years; those on site class 2 soils will reach heights of 76 to 85 feet; those on site class 3 soils, heights of 66 to 75 feet; those on site class 4 soils, heights of 56 to 65 feet; those on site class 5 soils, heights of 46 to 55 feet; those on site class 6 soils, heights of 36 to 45 feet; and those on site class 7 soils, heights less than 36 feet.<sup>1/</sup>

The mean site index is given for the listed species. It is based on field sampling.

The ordination symbol column gives a connotative symbol representing class and subclass. The first element in the ordination is a number that denotes potential productivity in terms of cubic meters of wood per hectare per year for the common tree species listed.<sup>2/</sup> Therefore, 16 means 16 cubic meters per hectare per year of wood is produced at the point where mean annual increment culminates. One cubic meter per hectare equals 14.3 cubic feet per acre. The second element is a letter expressing

<sup>1/</sup> Douglas-fir (interior) site index may also be given using the ponderosa pine growth curves.

<sup>2/</sup> Before March 31, 1982, this number was the site class as determined by site index.

selected soil properties associated with moderate or severe hazards or limitations in woodland use or management. Subclass R represents relief or slope steepness, subclass X represents stoniness or rockiness, subclass W represents excessive wetness, subclass T represents toxic substances, subclass D represents restricted rooting depth, subclass C represents clayey soils, subclass S represents sandy soils, subclass F represents fragmental or skeletal soils, and subclass A represents slight or no limitations. Subclass priorities are in the order listed above.

In the columns below management problems, the ratings used are slight, moderate, and severe.

The erosion hazard is based on the condition of the woodland following cutting or logging operations, or where the soil is exposed along roads, trails, or log-yarding areas.

Equipment limitations are a reflection of limitations in the use of equipment commonly employed in managing or harvesting of the tree crop. Major criteria are slope, rockiness, wetness, and texture.

Seedling mortality is the degree of expected loss of natural or planted tree seedlings as influenced by soil and topography.

Windthrow hazard is the degree of expected blowdown during periods of high wind and excessive soil wetness. It considers the soil characteristics that affect the development of tree roots and the ability of the soil to hold trees firmly.

Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover.

The woodland suitability section usually is not completed for soils primarily in cropland and those that do not produce commercial trees.

## XI. WINDBREAKS

This section deals with windbreak and shelterbelt plantings. The intent is to provide information on the tree species that are best suited for the particular soils. The height expected at 20 years of age is indicated for each species shown. In areas, where windbreaks are not normally needed, an entry of "none" is shown.

## XII. WILDLIFE HABITAT SUITABILITY

This section rates soils on their potential for producing various kinds of wildlife habitat. Soil suitability is one of the important factors necessary to produce desired populations of wildlife. Other

important factors, such as present land use and existing wildlife populations, require onsite investigation for their evaluation and are not considered here.

Each soil is rated for those habitat elements listed by columns, and from these ratings, each soil is rated for its suitability to produce various kinds of wildlife habitat--openland habitat, woodland wildlife habitat, wetland wildlife habitat, and rangeland wildlife habitat. Soils are rated for rangeland wildlife habitat only if native range plants are a dominant part of the natural plant community. They are rated for woodland wildlife habitat if trees are a dominant part of the natural plant community. Soils rated for woodland wildlife habitat usually are not rated for rangeland wildlife habitat and vice versa. Openland wildlife habitat includes cropland and pasture.

Levels of suitability are expressed in terms of good, fair, poor, and very poor.

The grain and seed and grass and legume columns have a close relationship to the Capability and Predicted Yields section. Wild herbaceous plants and shrubs columns have a close relationship to the Rangeland and Woodland Suitability sections. The hardwood trees and conifer plants columns have a close relationship to the Woodland Suitability section. However, dry soils in eastern Oregon that do not produce trees other than juniper may have no relationship to the Woodland Suitability section where these soils are irrigated.

#### XIII. POTENTIAL NATIVE PLANT COMMUNITY (Rangeland or Forest Understory Vegetation)

Common plant name. Common names of the major plants (usually those that contribute more than 5 percent of the composition) in the potential (climax) plant community are listed.

Percentage composition is an approximate percentage or percentage range of total annual production, dry weight, that each plant contributes to the total potential (climax) production.

The potential production in pounds per acre dry weight is the approximate total annual production of all plants normally growing on the soil in climax condition. In favorable years production is significantly greater than average; in normal years production is a long-term average; and in unfavorable years production is below average.

XIV. TERMS AND DEFINITIONS OF RESTRICTIVE FEATURES  
USED ON "SPI" SHEETS

AREA RECLAIM	Borrow areas are difficult to reclaim, and revegetation and erosion control on these areas are extremely difficult.
CEMENTED PAN	Cemented pan too close to surface.
COMPLEX SLOPE	Short and irregular slopes. Planning and construction of terraces, diversions, and other water-control measures are difficult.
CUTBANKS CAVE	Walls of cuts are not stable. The soil sloughs easily.
DEEP TO WATER	Deep to permanent water table during dry season.
DEPTH TO ROCK	Bedrock is so near the surface that it affects specified use of the soil.
DROUGHTY	Soil holds too little water for plants during dry periods.
DUSTY	Soil particles detach easily and cause dust.
ERODES EASILY	Water erodes soil easily.
EXCESS FINES	The soil contains too much silt and clay for use as gravel or sand in construction.
EXCESS HUMUS	Too much organic matter.
EXCESS LIME	The amount of carbonates in the soil is so high that it restricts the growth of some plants.
EXCESS SALT	The amount of soluble salt in the soil is so high that it restricts the growth of most plants.
EXCESS SODIUM	Exchangeable sodium imparts poor physical properties that restrict the growth of plants.
FAST INTAKE	Water infiltrates rapidly into the soil.
FAVORABLE	Features of the soil are favorable for the intended use.
FLOODS	Soil flooded by moving water from stream overflow, runoff, or high tides.

FRAGILE	Soil easily damaged by use or disturbance.
FROST ACTION	Freezing and thawing may damage structures.
HARD TO PACK	Difficult to compact.
LARGE STONES	Rock fragments greater than 3 inches across affect the specified use.
LOW STRENGTH	The soil has inadequate strength to support loads.
NO WATER	Too deep to ground water.
NOT NEEDED	Practice not applicable.
PERCS SLOWLY	Water moves through the soil slowly, affecting the specified use.
PERMAFROST	The soil contains frozen layers throughout the year.
PIPING	The soil is susceptible to the formation of tunnels or pipelike cavities by moving water.
PITTING	The soil is susceptible to the formation of pits caused by the melting of ground ice when the plant cover is removed.
PONDING	Soil in closed depressions inundated by standing water that is removed only by percolation or evapotranspiration.
POOR OUTLETS	Surface or subsurface drainage outlets are difficult or expensive to install.
ROOTING DEPTH	A layer that greatly restricts the downward rooting of plants -- occurs at a shallow depth.
SALTY WATER	Water too salty for livestock consumption.
SEEPAGE	Water moves through the soil so quickly that it affects the specified use.
SHRINK-SWELL	The soil expands on wetting and shrinks on drying, which may cause damage to roads, dams, building foundations, or other structures.
SLIPPAGE	Soil mass is susceptible to movement downslope when loaded, excavated, or wet.
SLOPE	Slope too great.

SLOW INTAKE	Water infiltrates slowly into the soil.
SLOW REFILL	Ponds fill slowly because the permeability of the soil is restricted.
SMALL STONES	Rock fragments that are 3 inches or less across may affect the specified use.
SOIL BLOWING	Soil easily moved and deposited by wind.
SUBSIDES	Settlement of organic soils or of soils containing semifluid layers.
THIN LAYER	Suitable soil material is not thick enough for use as borrow material or topsoil.
TOO ACID	The soil is so acid that growth of plants is restricted.
TOO CLAYEY	Soil slippery and sticky when wet and slow to dry.
TOO SANDY	Soil soft and loose; droughty and low in fertility.
UNSTABLE FILL	Banks of fill are likely to cave in or slough or uneven settlement is likely.
WETNESS	Soil wet during period of use.

## XV. GLOSSARY

- AEROBIC -- Living or active only in the presence of oxygen. Pertaining to aerobic decomposition by aerobic microbes.
- ANIMAL UNIT MONTH -- The amount of forage it takes to support an animal unit (basically a cow with calf or the equivalent) for one month.
- CLIMAX PLANT COMMUNITY -- The one best adapted to the particular environment of the site.
- CODOMINANT TREES -- Trees with crowns forming the general level of the forest canopy and receiving full light from above but comparatively little from the sides; usually with medium-sized crowns more or less crowded on the sides.
- DOMINANT TREES -- Trees with crowns extending above the general level of the forest canopy and receiving full light from above and partly from the sides; larger than average trees in the stand, with crowns well-developed, possibly somewhat crowded on the sides.
- EVAPOTRANSPIRATION -- The sum of water removed by vegetation and that lost by evaporation for a particular area during a specified time.
- FIELD CAPACITY -- The moisture content of soil in the field 2 or 3 days after a thorough wetting of the soil profile by rain or irrigation water. Field capacity is expressed as moisture percentage, dry-weight basis.
- FRAGIPAN -- A dense, brittle subsurface horizon that restricts water movement and root penetration.
- FRAGMENTAL SOILS -- Soils with so many stones, cobbles, pebbles, or coarse sands that there are voids greater than 1 mm.
- HARDPAN -- A subsoil layer cemented by silica and/or carbonates that is very difficult to excavate and makes a nearly impenetrable barrier to roots and water.
- HORIZON--SOIL -- A layer of soil, approximately parallel to the land surface, that has distinct characteristics produced by soil-forming processes.
- INFILTRATION (RATE) -- The rate at which surface soil absorbs water.
- INORGANIC SILTS -- Silts formed from parent material of a mineral nature.

KEY SPECIES -- Those species that differentiate one range site from another.

LEACHATES -- Liquids that have percolated through a soil and that contain substances in solution or suspension.

MAJOR LAND RESOURCE AREA -- Consists of geographic areas of land with particular but broad patterns of soil, climate, water resources, land use and type of farming.

MMHO - MILLIMHO --  $\frac{1}{1000}$  of an mho which is a reciprocal ohm (ohm spelled backward). MHO is a unit of conductivity and ohm is a unit of resistivity.

MAPPING UNITS, SOIL -- Areas shown on a soil map.

ORGANIC SOIL -- A naturally wet soil that may or may not be artificially drained, with 20 to 30 percent or more of plant residues either with or without mineral soil components.

PROPERTIES, SOIL -- Any or all of the measurable physical or chemical characteristics of a soil such as color, texture, structure, reaction, or exchange capacity.

QUALITIES, SOIL -- Inferences made by interpreting soil properties, such as drainage class is inferred from soil mottling.

SATURATION EXTRACT -- The solution removed from a soil completely filled with liquid, at less than 1/3 atmosphere.

SERIES, SOIL -- Consists of soils that have profiles almost alike.

SHEAR STRENGTH -- Ability to resist sliding along internal surfaces within a mass.

SKELETAL SOILS -- Soils with 35 percent or more, by volume, of fragments greater than 2 mm.

SOIL SLIPPING -- The downhill movement of a mass of soil under wet or saturated conditions.

STANDARD DEVIATION -- This is a measure of the spread of values about their arithmetic mean. It indicates that 2/3 of the samples (values) vary this much from the mean.

STRUCTURE, SOIL -- The arrangement of primary soil particles into compound particles or clusters that are separated from adjoining aggregates and have properties unlike those of an equal mass of unaggregated primary soil particles.

TEXTURE, SOIL -- The relative proportions of sand, silt, and clay particles in a mass of soil.

TOPSOIL -- A presumed fertile soil or soil material, or one that responds to fertilization, ordinarily rich in organic matter, used to topdress roadbanks, lawns, and gardens.

UNIVERSAL SOIL LOSS EQUATION -- A computed soil loss based on rainfall, soil-erodibility, slope length, slope gradient, cropping management, and erosion control practices.

WATER TABLES (SEASONAL) --

Apparent - The periodic occurrence of the water table as indicated by soil characteristics such as mottles and/or concretions.

Artesian - Ground water that is confined between impermeable layers and forced toward the surface by pressure.

Perched - Water which is prevented from percolating through the soil by a restrictive layer, such as impermeable bedrock or hard pans, and is separated from the ground water by a relatively dry zone.

Wilson notes

Criteria and Summary

Public Facilities and Services: General overview

Land Use History: TLSA, Ken Thomas Settlement

STATE LAW

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197.732: Exceptions allowed IF Physically Developed, or Irrevocably Committed. Describes process, what to look for. Actual factors addressed in OAR section

\*(1.) OAR 660-004-0025: Exception Requirements for Land Physically Developed to Other Uses: requires describing extent of development on a map, is it "Physically developed to the extent that it is no longer available for uses allowed by the applicable goal"?

- Describe management of small woodlands, soils (49C and 50D), slope, southern parcel of tract assessor information (is successfully managing to meet annual income requirements)

\*(2.) OAR 660-004-0028 (1)-(2): Irrevocably Committed: is it committed? Are existing adjacent uses making uses allowed by the applicable goal impracticable? Discuss FF and RR zones all around, use of land (development %), and relationship to southern parcel.

\*(3.) OAR 660-004-0028(3): Uses allowed by applicable goal are impracticable, specifically Goal 4 uses like forest operations, harvesting of forest products, etc. Describe how adjacent lands in residential use make it unlikely, but adjacent forest lands make it potentially possible. "just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use." Not necessary, but how would it be affected?

\*(4.) OAR 660-004-0028(4): Does the conclusion address all factors of section 6 and sufficiently explain why the facts support the impracticality?

\*(5.) OAR 660-004-0028(5): Do findings and facts discuss irrevocably committed throughout the report?

\*(6.) OAR 660-004-0028(6): Addressing the following factors: existing adjacent uses, existing public facilities and services, parcel size and ownership patterns of the area and adjacent lands, neighborhood

and regional characteristics, natural/man made features, physical development (this one has approval/denial findings)

OAR 660-004-0028(7): Does the submittal include required info? Yes

OAR 660-004-0040: Not applicable, not related to Goal 14 urbanization, not looking to allow parcels smaller than allowed by proposed new zone, any future proposals will have to comply with F-F requirements

OAR 660-004-0118: Planning and Zoning for Exception Areas, Describing area, are uses compatible with nearby resource areas, (NOTE: one semi-denial finding here – may decide to leave this in if relevant), how it relates to nearby urban areas (none) or industrial uses (none)

#### COMPREHENSIVE PLAN

Findings describe who may apply (QJR = landowner),

(factors for consideration, not specific criteria. Denials here are generally related to denials elsewhere. Are they generally satisfied? If not, could be a denial)

H 1,2: Review Goals, does this comply, and does it demonstrate substantial proof that such a change “shall not be detrimental to the spirit and intent of such goals”. \*(8.)

1. Citizen Involvement
2. Land Use Planning
3. Agricultural Lands
4. \*(9.)Forest Lands
5. Open Spaces, Scenic and Historic Areas, and Natural Resources
6. Air, Water, and Land Resources Quality
7. Areas subject to Natural Disasters and Hazards
8. Recreational Needs
9. \*(10.)Economic Development
10. Housing
11. Public Facilities and Services
12. Transportation
13. Energy Conservation
14. Urbanization

\*(11.) H 3: Mistake in original Comp plan can be demonstrated. Did TLSA resolve the mistake, or did it miss this property?

\*(12.) H 4: Factors relating to need for healthy, safe, aesthetic surrounding and conditions. Fire risk increase? Is it significant enough to matter? Does the proposal match the aesthetic of the area?

\*(13.) H 5: Proof of change in the inventories originally developed. Original inventory included this as forest, has since changed (TLSA), but not here. Stop encroachment?

\*(14.) H 6: Revisions based on special studies or other info. Has enough info been provided to justify the stated need for low density housing, for which F-F could be used?

I. Transportation Compliance. Not significant enough to trigger a Traffic Impact Analysis. 29 new ADT would not change functional class of road.

#### J. Procedures

Application, notification, hearings. Complied.

#### WC LUDO

9.010 Application presented on forms used as issued by the office.

9.020.A. "The original zoning was the product of a mistake" – No Finding, but there should be. PC should recommend adding a finding that states whether it was or was not mistake based on all discussions throughout, or at least state that this is discussed above in sections XYZ?

\*(15.) 9.020.B.1. the rezoning will comply with Comp Plan (related to earlier discussion – it will or it won't depending on what has been decided above)

\*(16.) B.2. site is suitable to proposed zone. LUDO states purpose of F-F: "The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses." But Comp Plan says: "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge." These are Class 4. Does it make sense as a residential area considering residential uses nearby?

\*(17.)B.3 consideration of public health, safety, welfare. Fire risk? Water impacts?

9.030 Transportation Planning Rule Compliance: insignificant impact

Rest of Chapter 9 = any additional conditions, recommendations, notice requirements, actions

PLANNING DEPARTMENT

Planning Commission  
Public Hearing  
April 2, 2019

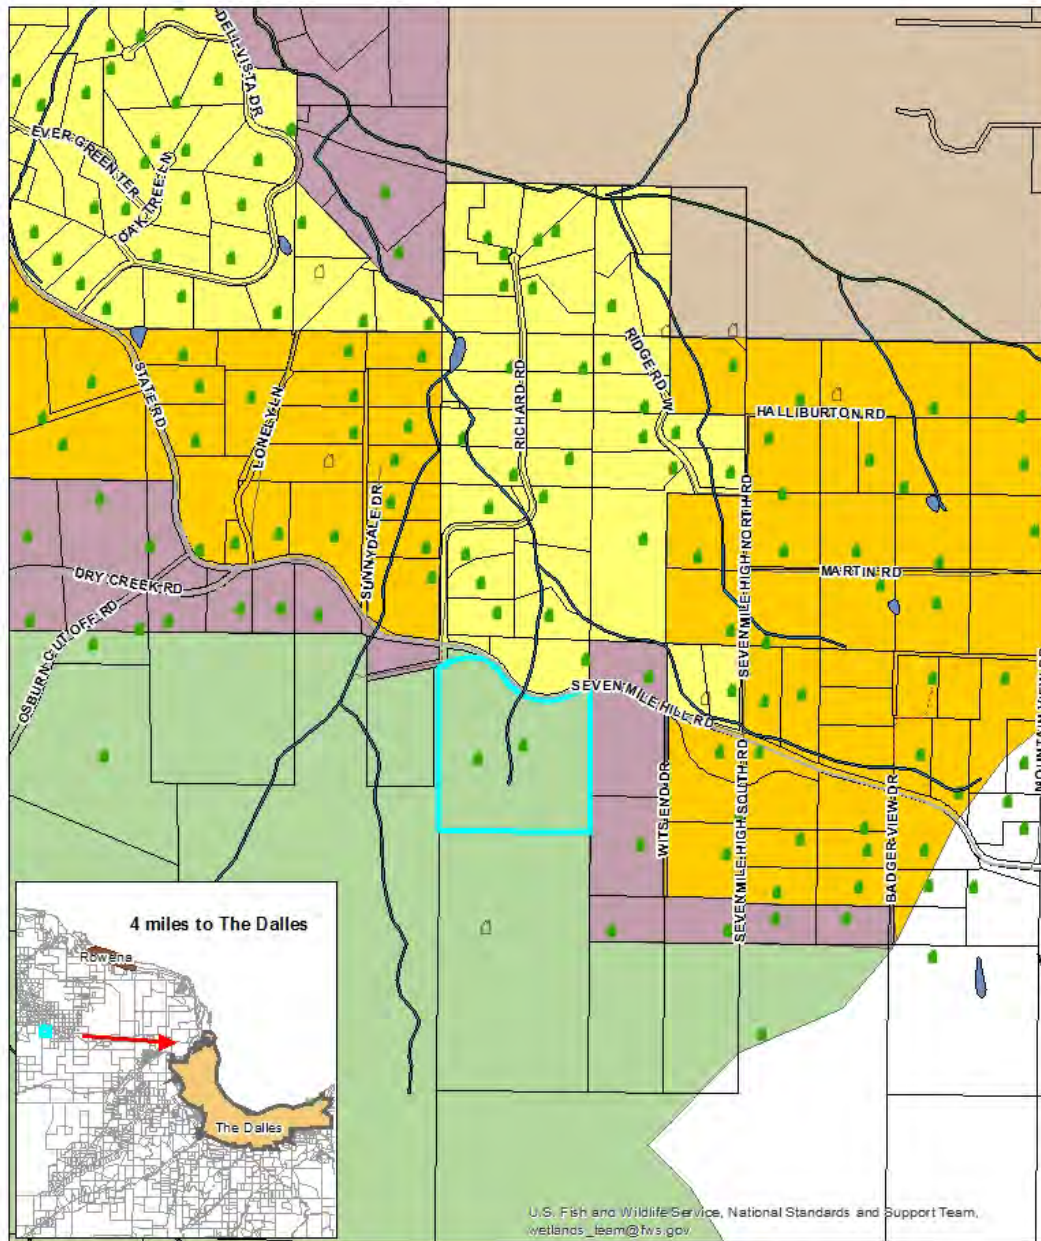

Applicant/Owner: David Wilson  
(921-18-000086-PLNG)

# Request

- Comprehensive Plan Map Amendment: Change a legal parcel designated “Forest” to “Forest Farm;
- Exception to Statewide Planning Goal 4 – Forest Lands; and
- Zone Change: Change a legal parcel tax lots zoned F-2 (80), Forest, to F-F (10), Forest-Farm
  - Applicant/Owner: David Wilson
  - Location: 7100 Seven Mile Hill Road
  - Size: @40 acres

# Vicinity Map

*Pioneering pathways to prosperity.*

# Staff Recommendation

- Staff's approach is to remain neutral and objective throughout the process and garner as much input as possible.
- Staff will support the recommendation that the Planning Commission feels is appropriate to forward to the Wasco County Board of Commissioners.

# Format

- Draft Findings in Green (Approval) and Yellow (Denial)
- It only takes one Criterion not being met (Yellow) to recommend denial of the request
  - (Except in the Comp Plan section)
- Today's hearing format recommendation
  - Straw Poll, discussion, identify and focus on differences

# Staff Comments

- Apprehensions

- Conducting forestry operations are not currently impracticable (Goal 4).
- More residences would result in the loss of more wildlife habitat (Goal 5).
- The proposal would create more residences, which would increase wildland-urban interface fire risk and potential impacts (Goal 7).
- The impact of potentially three new single family dwellings on available water supplies in an area with existing concerns (Goal 5, 6, 11).

- Advantages

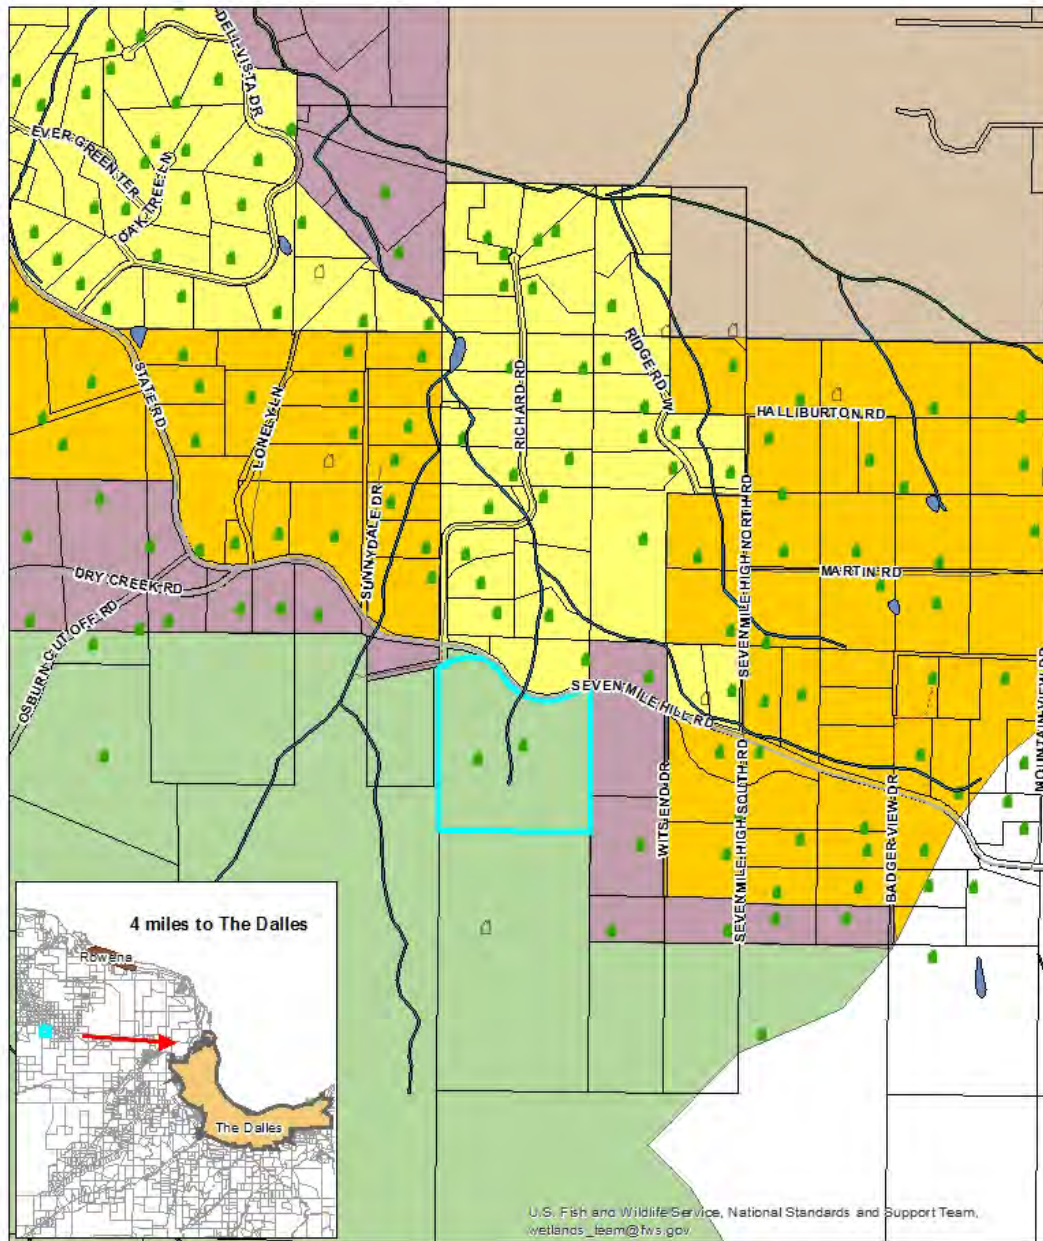

- Three new dwellings will increase rural residential housing supply (Goal 10).
- On land not currently (or in recent history) being used to harvest forest products, the transition from unused potential resource lands to probable useful residential land could result in a net positive impact economically (Goal 9).

\*Comprehensive Plan findings: Factors for consideration, not standards that must be strictly met. They must still show that they can be generally satisfied.

(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and

(c) Complies with standards under subsection (1) of this section.”

Planning Goal 2, part II, states:

A local government may adopt an exception to a goal when:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”

**FINDING:** Both the goal and OAR 660-004-0005(1)(c) adopt the legislative definition of an “exception” with minor variation— the goal states “Complies with standards for an exception” and the rule states “Complies with. . . the provisions of this division.” OAR 660-004-0010(1) explains, “The exceptions process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” and includes “Goal 4 ‘Forest Lands.’”

Goal 4 provides that: “Where a ... plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

Rule definitions of “resource land” and “nonresource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be planned and zoned for forest-farm uses, a rural residential, nonresource category of uses under the County’s plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC’s rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state’s forest land base. These reasons are addressed below.

## **2. Exception Requirements for Land Physically Developed to Other Uses.**

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

OAR 660-004-0025 states:

(1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)

- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** To determine the extent to which the property is physically developed, staff compared where driveways and existing structures are, and identified them in the following map:

Figure 1: Development

This map demonstrates that currently approximately 12.5% is physically developed. That leaves 87.5% available for farm or forestry uses. These numbers are for discussion purposes and to estimate what is currently physically developed, and what is not (but may still be used by the landowner for farm or forest uses). Although most of the County's commercial timber use occurs in National Forests or in lands owned by large lumber companies such as Weyerhaeuser or SDS, small woodlots owned by individuals and small families play a vital role in the industry as well. These lands are often those that abut or intermingle with rural residential uses, and in many cases the tax benefits can be the only way to afford to successfully manage (for both fire safety as well as timber harvesting) several dozen acres of

woodland that may accompany that rural residential life style. Collectively across Oregon, many thousands of acres of forested lands are owned in these small parcels, and Goal 4 seeks to protect them from the effects of rural sprawl. A woodland as small as two acres qualifies for Oregon's Special Assessment Program for Forestland, allowing landowners to have a reduced property tax assessment. With 87.5% (35 Acres) of undeveloped land on the subject parcel, this land could still be useful under Goal 4 provisions. However, whether that land is capable of supporting commercial timber production depends heavily on other factors such as available soil type and slope.

#### *Soils*

Two soil types are identified on the subject parcel: 49C and 50D (Wamic Loam – see Exhibit 5). Both are Class IV soils. The "Guide for using Soil Survey Single Phase Interpretation Sheets" (also known as the Green Sheets – See Exhibit 6) states that Class IV soils "have very severe limitations that reduce the choice of plants, require very careful management, or both". The Green Sheets maintains statistics on capability and yields per acre of crops and pasture, woodland suitability, windbreaks, wildlife habitat suitability and potential native plant community. These categories and the ratings for these two soil types are relevant to how well this property may be able to fulfill the requirements of Goal 4: Forest Lands by conserving forest lands for forest uses.

- Capability and yields per acre of crops and pasture (high level management)
  - Both soil types are listed as 4e (Class 4 which has "very severe limitations that reduce the choice of plants, require very careful management, or both", Subclass e which indicates that the main limitation is risk of erosion unless close-growing plant cover is maintained). Both soil types have Winter Wheat (35 bushels/acre) and Grass Hay (1.5 tons/acre) listed.
- Woodland Suitability
  - Both soil types are listed as 4A (Class 4, discussed above, and subclass A which represents slight or no limitations). For both soil types four out of five management problem categories are listed as having 'slight' or 'moderate' problem potential with plant competition the only one rated as 'severe' in both. Plant competition indicates the potential invasion of undesirable species, usually brush, when openings are made in the tree cover. Common trees on these soil types are Ponderosa Pine and Oregon White Oak with Ponderosa Pine listed as the only tree to plant. The site index for both is 70 which is an indication of the potential productivity and is based on the average total height of the stand the age of 100 years. A site index of 70 translates to the high end of Cubic Foot Site Class 6 (20-49 cubic feet per acre potential yield category) for Ponderosa Pine.
- Windbreaks
  - For both soil types the Green Sheets indicate "none" for Windbreaks. This states that windbreaks are not normally needed.
- Wildlife Habitat Suitability
  - This section relates soils to their potential for producing various kinds of wildlife habitat. For both soil types under "potential for habitat elements", hardwood and conifer trees are both rated as Fair. Under potential as habitat for: Woodland wildlife, the rating is also Fair.
- Potential Native Plant Community
  - For both soil types the same five grass and shrubs are mentioned as common, as well as two types of trees – Oregon White Oak and Ponderosa Pine.

A soils map is attached as Exhibit 7 (soil descriptions and their guide are contained in Exhibits 5 and 6).

#### *Slope*

The property is mostly flat from the north to the center rising gradually from there to the south, east, and west. Slopes from the road to the southern property line average 6-10%. The low point of the parcel is in the northwest corner at about 1550' in elevation, 100' lower than the house at about 1650' and 210' below the high point to the southeast at 1760'. There are no slopes on the property that are too steep for either residential development or commercial forestry.

The vegetation of the subject parcel is split between open grassland in the north and center, with primarily Oregon White Oak interspersed with Ponderosa Pine, and a very few Douglas Fir around the edges of the property. Grasses and shrubs create moderately dense underbrush throughout.

The soils indicate some suitability for agriculture and there is history of such on both this parcel and the parcel to the south, also owned by the applicant (See below in b. OAR 660-004-0028 (2) for more detailed information about adjacent lands). The home on the applicant's adjacent southern parcel was approved in 1989 through the Conditional Use Permit process as a "Dwelling in conjunction with agricultural use." Additionally, an agriculture structure was placed on that southern parcel several years ago and retroactively approved through a Planning Commission action in 2017 (PLAAPL-17-10-0001). Discussions in the staff report for that decision, as well as application material including a Farm Management Plan, state that a portion of the parcel to the south is currently used for farm use, producing approximately 6 acres of alfalfa/oats, five poultry, and three cattle (seasonal), with plans upon the owners retirement to expand the farm use.

On the subject parcel itself, aerial imagery on County GIS (accessed November 8, 2018) appears to indicate several acres of crops in the western half of the open area at the center of the property. Beyond the three seasonal cows reportedly used on these parcels recently, the proposed exception area does not have a known history of commercially grazing for sheep or cattle.

The following Finding was made for the 2017 application in regards to agricultural use on the southern parcel in the tract:

*"According to Melanie Brown, Appraiser, the subject parcel is required to generate a minimum income of \$3,000 per year. She stated that the Assessor sends out a questionnaire every three years to determine what income has been generated from farm use. Assessor records indicate that the subject parcel has exceeded the income requirement for the past several years..."*

**APPROVAL FINDING:** The development pattern that exists on this property makes forestry uses impractical. These include the current home and outbuildings located halfway up the property on the western side after an approximately 1,000' driveway, the old farmhouse in the center after a 400' driveway and the old barn another 240' further south, within 450' of the rear property line. The latter two more than half bisects the property contributing to the physically developed nature of the subject parcel. Due to these physical developments, and the impracticality of conducting forestry uses around them, a physically developed exception would apply.

**DENIAL FINDING:** The clustering of the existing house on the western edge, with the 1000' driveway forming a property boundary line establishes very little physical development throughout the subject parcel. There are two old structures in the center of the property, along with another 640' driveway that runs north to south accessing them. However these are not useable in the condition they are in and the driveway would be as useful for commercial forestry uses in accordance with Goal 4 as it would

be for future residential uses in the event of an exception. Slope throughout the property is gentle, and soils are all Class 4, which, as discussed above, is conducive to forestry uses. This land has minor physical developments on it, but it is still available for forestry uses allowed by Goal 4, so a physically developed exception would not apply.

**3. Exception Requirements for Land Irrevocably Committed to Other Uses.**

*OAR 660-004-0028 contains standards for adoption of a "committed" exception.*

**a. OAR 660-004-0028(1):**

(1) *A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:*

(a) *A 'committed exception' is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;*

(b) *For the purposes of this rule, an 'exception area' is that area for which a 'committed exception' is taken;*

(c) *An 'applicable goal,' as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.*

**FINDING:** This applicant proposes a 'committed exception' for this property, which is the 'exception area'. The proposed goal exception applies to land in the Forest zone (F-2) and the 'applicable goal' that currently applies to these lands is Goal 4: Forest Lands.

**APPROVAL FINDING:** An exception to remove this parcel from the forest zone and transfer it to a non-resource "Farm-Forest" (FF) zone would still promote and permit many of the uses allowed in Goal 4 designated areas. More importantly, granting the request will promote economically efficient forest practices on large forested tracts south of the subject property, in a manner more consistent with sound management practices.

**DENIAL FINDING:** The map above in section OAR 660-004-0025(2) dealing with physically developed exceptions indicates that only 12.5% is developed, with only 7.5% being used for residential purposes (the other older structures and driveway are unused). Additionally, those residential uses are clustered along the western property line. The applicant claims that the 40 acre site is irrevocably committed to residential uses, when in fact only 12.5% is committed to general development, and only 7.5% committed to residential use. This leaves 87.5-92.5% remaining for forest use. As discussed above in a thorough review of the soil types on site and how they are classified, staff finds that the portion that remains uncommitted to residential use is sufficient to be used for a forestry use. Though there are portions that are grass land currently and portions that are farmed currently, there are also portions that have small amounts of merchantable timber present, as well as the soil conditions to grow more if a landowner so desired to make that investment in the future of the land. Combined with the 69 acre adjacent parcel to the south, also owned by David Wilson, this tract consists of 109 acres of land with commercial timber potential. Small woodland forests are found throughout the Pacific Northwest and are a viable means of using this land productively while meeting the applicable statewide planning goal

#4: Forest Lands. Staff does not find that the existing residential commitment of 7.5% of the property qualifies it as committed to the extent where a goal exception could apply.

- b. OAR 660-004-0028(2): “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:

(a) *The characteristics of the exception area;*

**FINDING:** The characteristics of the exception area are fully discussed in the findings above in response to OAR 660-004-0025.

(b) *The characteristics of the adjacent lands;*

**FINDING:** The parcels immediately adjacent to the exception area have substantially similar characteristics for terrain and soil types (See Exhibit 7, Soils map, and Exhibit 8, Submitted Maps). North of Sevenmile Hill Road and West of the Osburn Cutoff Road, the land is at a lower elevation and has fewer trees.

The areas to the north and east of the proposed exception area have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the four subdivisions in the area, three were platted in the early part of the 20th century, and the fourth in 1979 (Fletcher Tract-1908; Fairmont Orchard Tracts-1911; Sunnysdale Orchards-1912; Flyby Night Subdivision-1979). For three of these subdivisions, the majority of the lots are approximately 5 acres in size. The county has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Between 1994 and 1997, the exception area and the lands surrounding it were included in what Wasco County collectively designated as the “Transition Lands Study Area” (TLSA). The county performed an analysis of the area, in part to determine where rural residential development would be appropriate. The final report for the TLSA was published on September 12, 1997, (Exhibit 1) and included recommendations outlining the sub-areas within the study area that were suitable for residential development. The exception area and the lands to the north and east were determined to be suitable for further rural residential development. Certain zone changes have been processed as part of the TLSA program to further the development of residential uses in the area surrounding the exception area.

The exception area is surrounded on two sides (north and east) by residential development and land zoned for rural residential development, under the three non-resource rural residential zoning designations, R-R(10), R-R(5) and F-F(10). The parcel immediately to the south is zoned for forestry uses, but is used for residential and small scale agricultural uses. Lands south of that, and immediately west of the subject parcel and proposed exception area are generally used for commercial forestry. See the map below for a visual representation of the area.

*(c) The relationship between the exception area and the lands adjacent to it;*

**FINDING:** As described in preceding sections of this submittal, the exception parcel is immediately abutted to the south and west by F-2 (80) Forest zoned property (69 and 439 acres), to the north across Seven Mile Hill Road by R-R (5) Residential zoned property (7.9 acres), and to the east by F-F (10) Farm Forest zoned property (averaging 10.8 acres). The properties to the south and west are resource zones while those to the north and east are non-resource zones.

All are in separate ownerships, except the 69 acre F-2 parcel to the south, which is also owned by the owner of the subject property of this application, David Wilson. Combined with the subject parcel that is a 109 acre tract of resource zoned Forest land. There is another home on the southern property and a shop that is utilized by the applicant for farm use (according to information from previous Land Use decisions found in PLAAPL-17-10-0001 and PLAPAR-17-05-0002) on the southern property. The southern parcel is accessed by the same driveway that accesses the existing home on the subject property, running along it's western edge.

The County GIS map shows that the western boundary of the subject parcel abuts a narrow spur of the larger 439 acre commercial forestry operation to the south west of the two parcels owned by David Wilson. That spur appears to be able to provide access to Seven Mile Hill for that forestry operation. Immediately to the west of that is the 16 acre parcel described in (b) above as being 1/3<sup>rd</sup> F-F and 2/3 F-2 zoned property. That parcel abuts Seven Mile Hill Road but current access is shared along the northern 120 feet of the subject parcel's driveway. No dwellings exist on that property.

The subject property does not have any special relationships with the other non-resource properties adjacent to it.

*(d) The other relevant factors set forth in OAR 660-004-0028(6).*

**FINDING:** These factors are discussed below.

- c. OAR 660-004-0028(3): "Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is 'impossible.' For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

*(a) Farm use as defined in ORS 215.203;*

*(b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;*

*(c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a)."*

**FINDING:** This application seeks an exception to Goal 4: Forest Lands, where the primary goal is to “conserve forest land for forest uses”.

ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. “Farm use” includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. “Farm use” also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. “Farm use” also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. “Farm use” includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. “Farm use” does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including “farm use” and “propagation or harvesting of a forest product,” and OAR 660-006-0025(2)(a) states:

- (a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

The “forest products” definition can be found in ORS 532.010(4), which states that forest products are “any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores.” An examination of Farm Uses and their potential on this property are also relevant as indicated by OAR 660-004-0028(3) above. There are currently agricultural practices occurring on the subject parcel and the adjacent property to the south in the same ownership tract as described above in OAR 660-004-0028(6)(c)(B). The uses on the adjacent tract in the same ownership are relevant due to a requirement to examine “the relationship between the exception area and the lands adjacent to it” when examining a potential irrevocably committed exception as discussed above in OAR 660-004-0028(2).

OAR 660-006-0025 describes those “Uses Authorized in Forest Zones”. An exception granted to this goal may have an impact on these types of uses. This OAR describes five (5) general types:

- “(a) Uses related to and in support of forest operations;
- (b) Uses to conserve soil, air and water quality and to provide for fish and wildlife resources, agriculture and recreational opportunities appropriate in a forest environment;
- (c) Locationally-dependent uses, such as communication towers, mineral and aggregate resources, etc.

(d) Dwellings authorized by ORS 215.705 to 215.755; and

(e) Other dwellings under prescribed conditions”

In regards to (c), no aggregate sites have been identified on this property, nor is there anything about its location that makes it significant for communication towers. In regards to (d) and (e) there is currently an existing dwelling on the parcel, with no potential for further dwellings under current rules in the Forest Zone. That leaves (a) and (b) as the primary uses which must be safe guarded on this property in accordance with Goal 4: Forest Lands.

The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means “not capable of being carried out in practice,” according to Webster’s New World Dictionary (2nd College Ed., 1980). “Capable” means “having ability” or “able to do things well.” Id. Finally, “in practice” means by the usual method, custom or convention. Id. Webster’s Third New International Dictionary, (Unabridged Ed., 1993) defines “impracticable” as “**1a** : not practicable : incapable of being performed or accomplished by the means employed or at command : infeasible \* \* \* **c** : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*”

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice in the exception area. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

#### APPROVAL FINDING

The current level of residential development has increased to the point that commercial resource use has become impracticable. The exception area is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that competes with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable. To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the suitability of the area for farm uses. Due to the existing parcel size, climate and development in the area, it cannot be, and is not, currently employed for the primary purpose of obtaining a profit from agricultural uses, though small scale farm uses do exist on the property and that of the same tract to the south. The area can support these small-scale, “peripheral” farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

DENIAL FINDING: One significant conflict is the risk of fire. The increased numbers of residences increase the risk and potential severity of fires, because fires caused by humans add to the frequency of natural fires. Human occupation is always associated with quantities of flammable materials and fire accelerants, such as fuels on household products. The impact of the fire risk is magnified not just by the number of residences but also physical features, including terrain, climate and vegetation (see discussion earlier).

Based on the current composition of the subject parcel as being predominantly open space, or oak, with some areas of Ponderosa Pine and a few Douglas Fir trees, it is not currently composed of enough marketable timber to harvest in the near future. However, those open areas can be planted, and the soil types are good enough to support merchantable timber, as discussed in findings above for OAR 660-004-0025. The applicant did not sufficiently demonstrate the impracticability of utilizing the 35 undeveloped acres. On the contrary, the state of Oregon, and Wasco County, recognize the ability to have as little as 2 acres of woodlands to qualify to receive tax reductions for forestry uses. The current owner's lack of interest in forestry uses on his property does not preclude it from having potentially valuable merchantable timber in the long run. The slopes, soil types, and ability to be used for small scale agriculture demonstrate that this parcel could practicably be used for forest uses per OAR 660-004-0028(3).

- d. *OAR 660-004-0028(4): "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."*

**FINDING:** All applicable factors of section (6) are addressed below.

APPROVAL FINDING: The applicant's statement and exhibits address all applicable factors and reasons why the facts support the conclusion that uses allowed by Goal 4 are impracticable in the exception area, as described throughout this report.

DENIAL FINDING: The applicant submitted extensive statements and exhibits explaining their position on why they feel that the facts support the conclusion that uses allowed by Goal 4 are impracticable. However, staff has found these statements and exhibits to be inconclusive in that attempt, with reasons given throughout this report.

- e. *OAR 660-004-0028(5): "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands."*

**FINDING:** The proposal is for a goal exception, zone change, and comprehensive plan amendment for one parcel. This parcel makes up the entirety of the "exception area". This parcel is physically developed as described above. Findings of fact and a statement of reasons why this land is found to be irrevocably committed are discussed throughout this report.

- f. *OAR 660-004-0028(6): Findings of fact for a committed exception shall address the following factors:*

engages in forestry operations on his extensive Wasco County land holdings. The power line separates the northern 70 acres of that parcel from the southern 370 acres, all of which is in the F-2 (Forest) Zone. This impediment feature is not insurmountable or impassable to forest uses.

(f) *Physical development according to OAR 660-004-0025; OAR 660-004-0025 states the "Exception Requirements for Land Physically Developed to Other Uses" as follows:*

- (1) *A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.*
- (2) *Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception."*

**FINDING:** Part of the justification that the applicant has given for this exception is that a dwelling currently exists on the subject parcel. The exact nature and extent of this house and other structures on the property are identified in **Figure 1 above**. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is 40.6 acres. If the zone change were to be approved, this land would become F-F (10) and three additional dwellings could be built there.

**APPROVAL FINDING:** The current home, abandoned old home, and associated outbuildings are current and former residential uses on this property. Though there is open space on roughly half the eastern portion of the property, it is predominantly oak and open grassland which is not suitable for forestry uses as described and supported in Goal 4. A driveway runs along and near the western property line that connects to another residence on the property to the south of the subject parcel. This development – buildings and residential access ways – qualify as uses not allowed by the applicable goal, Goal 4 in this case.

**DENIAL FINDING:** The current home and driveway are clustered against the eastern property line. There are abandoned (potentially historical) structures near the center of the property, accessed by another driveway. However, the entire eastern and southern portions of this 40.6 acre parcel are undeveloped. Much of the center of the property is currently grassland, but the eastern edge and southern half are wooded with oak and ponderosa pine. Ponderosa Pine is a marketable forest product and the soil characteristics of the parcel demonstrate that more could be grown for harvest in this area, as described above. Though there are buildings on the subject parcel, they do not dominate the landscape, and forestry uses allowed by goal 4 could still be cultivated across much of the property. These structures do not constitute enough physical development to justify a goal exception in a forest resource zone.

(g) *Other relevant factors;*

The following information is in regards to immediately adjacent properties:

Direction	Account	Size	Zone	Use
North	1196	0.7	F-F (10)	Vacant
North	1195	7.9	R-R (5)	Residential
North East	1194	6.4	F-F (10)	Residential
East	885	13.2	F-F (10)	Vacant
South East	887	12.9	F-F (10)	Residential
South	13446	69.3	F-2 (80)	Residential/Resource
South West	399	439	F-2 (80)	Resource
West			F-2 (80)	Vacant
North West	400	16.3	F-F (10)	Vacant

The residential use of the subject property is compatible with adjacent uses. In general, lands to the south are F-2, resource lands. Lands to the east and west, immediately south of and adjacent to Seven Mile Hill Road are residential (F-F (10) or R-R (10)). Nearby lands to the north, across Seven Mile Hill Road are almost all either R-R (5) or R-R (10) and in residential use. The subject property is currently being used as both a residence and a small farm. The continued use of this land in a residential fashion would be compatible with nearby residential uses, but expanding would conflict with potential resource uses.

The BPA line that runs 1/5 mile south of the subject property is the only public facility nearby. Expanded residential use of the subject property would not affect the use and operation of this transmission line. Public services used by the nearby area include roads, police, fire, electrical, telephone, and solid waste disposal. The potential addition of a maximum of three new single family dwellings along Seven Mile Hill Road would have a negligible effect on roads, police, electrical, telephone or solid waste disposal services. There is a slight increased risk of wildfire with the increase of residential use in this wildland-urban interface area.

Sewer services in rural areas of the County are handled with individual septic systems. Nearby and adjacent residential uses on ten acre parcels of land have not encountered difficulty establishing sufficient septic systems. In a November 7, 2018 email John Zalaznik, Environmental Health Supervisor for the North Central Public Health District, stated (in reference to the subject property):

"I think in general that area could accept on site systems. The area looks like it is mostly treed so in general those sites have deeper soils than those open meadow sites. The soils can change so fast though I would not be certain until site evals are done."

Water services in rural areas of the County are handled with individual private wells. There has been widespread concern in the Seven Mile Hill area about a gradually withdrawing water table requiring deeper wells and occasionally resulting in neighboring wells drying up. The addition of three new private wells could have a slight effect on available water supplies for established residential uses in the area. According to an October 12, 2018 email between staff and Watermaster Robert Wood, "Sevenmile Hill/ Mosier groundwater levels are declining about 2 feet per year on average". The Oregon Water Resources Department is "not allowing new water rights in that area as the aquifers are either withdrawn from new appropriations or it has been determined water isn't available within the capacity of the resources." He stated that those uses that are exempt from water rights, such as "single or group

**FINDING:** The following findings demonstrate how compliance **is is not** achieved with statewide land use planning goals that may apply to the request, as required to be considered by subsections 1 and 2 of H., the plan amendment General Criteria:

Goal 1 – Citizen Involvement. The purpose of Goal 1 is to ensure the *“opportunity for citizens to be involved in all phases of the planning process.”* Wasco County has included opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures such as public notice and public hearings for the proposed changes. Compliance with Goal 1 is ensured through compliance with the applicable Plan and zoning ordinance procedural provisions. These proceedings are being conducted with notice and hearings as required by law and County ordinance. Public participation will be a feature of Planning Commission and Board of County Commissioner meetings, which – by the time of this hearing - will have been sufficiently noticed to the public according to state law. Given this information, the proposal complies with Goal 1.

Goal 2 – Land Use Planning. The purpose of Goal 2 is *“to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.”* The County’s planning process has been acknowledged by the State as being in compliance with the Statewide Planning Goals, and was followed in consideration of the proposal. The “adequate factual base” is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal complies with Goal 2, requirements for the adoption of exceptions to a statewide goal.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal. Small-scale farming activities may be possible in the area, but are not likely to be affected by the allowance of three new rural residences.

Goal 4 – Forest Lands. Goal 4 provides for the preservation of Forest Lands for forest use. The property included in the proposed exception area is currently designated Forest Land but is not in forest use, nor is it in a forest assessor class (its assessor class is 401 for residential improved tract). As indicated by the applicant’s materials, the intention of this proposal is to preserve small-scale forest and farm uses, while allowing establishment of rural residences, through a conditional use process, under the County’s F-F(10) zoning. Because the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4.

**APPROVAL FINDING:** The exception is justified in part 2, addressing LCDC’s administrative rule requirements for “built” and “committed” exceptions. The proposal complies with Goal 4.

**DENIAL FINDING:** Part 2 below outlines how this application fails to meet Goal 4 requirements and does not adequately address LCDC administrative rule requirements for “built” and/or “committed” exceptions. The proposal does not comply with Goal 4.

Goal 5 – Open Spaces, Scenic and Historic Areas, and Natural Resources. The subject parcel is located within the Low Elevation Winter Range of the Big Game Wildlife Overlay. Wasco County recognizes in its Comprehensive Plan that big game herds are a valuable natural resource. The County Zoning Ordinance contains siting and development criteria, found in Zoning Ordinance Section 3.920, for lands within designated areas in the County. Goal 5 is met by the application of these standards to any development

within the designated Big Game Winter Range. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 – Air, Water, and Land Resources Quality. Goal 6 is “*To maintain and improve the quality of the air, water and land resources of the state.*” The proposed exception area is not located in a federal air quality attainment area, and three new single family dwellings will not generate significant additional air pollution. Sewage disposal needs of all new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is “*To protect people and property from natural hazards.*” Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The only natural hazard listed in the rule relevant to the request is “wildfires.” Chapter 10 of the Wasco County LUDO, created in 2007, establishes standards and requirements that ensure fire safe development throughout the County, and would apply to any additional residences or land uses in this area. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is “*To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.*” Under the current zoning, hunting and fishing operations are allowed outright without lodging, and parks and campgrounds are allowed as conditional uses. If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. Recreational needs can be achieved under both zoning designations. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is “*To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon’s citizens.*” The subject property is currently being used for one single family dwelling. A zone change to F-F (10) would potentially increase that to a maximum of four single family dwellings, an increase in economic development. It is not currently being used for forest uses, nor is it being assessed for forest tax deferral status. Previous analysis above in OAR 660 Division 4 Section 25 of soil types, as well as the current use of the neighboring approximately 1,100 acre tract for forestry to the south show that this parcel is in an area that does have potential to be used as part of a commercial forestry operation.

**APPROVAL FINDING:** The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with Goal 9.

**DENIAL FINDING:** The proposal promotes Goal 9 by allowing residential uses. However Goal 9 would also be promoted by encouraging forestry practices on this parcel, which the County considers to be the appropriate use of the subject property in view of its established zoning and the economic potential of timber and logging that exists, as outlined above in OAR 660 Division 4. The proposal is not consistent with Goal 9.

Goal 10 – Housing. Goal 10 is “*To provide for the housing needs of citizens of the state.*” The rule is directed to lands in urban and urbanizable areas, and encourages residential development to occur in existing urban areas. However, the proposal will allow development of additional rural residences in an area that is largely committed to existing rural residential uses. Guideline A(4) of Goal 10 states: “Plans

Goal 14 – Urbanization. Goal 14 is “To provide for an orderly and efficient transition from rural to urban land use...” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No “urban” services will be required to allow the maximum amount of development contemplated by this proposal. In the TLSA Study, well water was noted as being available in the area in sufficient quantities to serve the proposed housing density that would result from a zone change to F-F (10) (see Exhibit 4, TLSA Groundwater Study). However, as discussed above in Background information, the Wasco County Watermaster, Robert Wood, and the OWRD have identified the Seven Mile Hill area as having decreasing water supplies since then. Any future application for property division or development will need to comply with their requirements regarding residential well water usage. The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 are coastal specific goals and do not apply in Wasco County.

3. *A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.*

**FINDING:** Webster’s least recriminatory definition of “mistake,” most appropriate here, is “a misunderstanding of the meaning or implication of something.” (Unabridged Ed., 1993). This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the area are more appropriate than the original designations. As noted previously, this area was evaluated as part of the TSLA – which posed a very similar question. The application materials assert that the County was incorrect in its characterization of the area as most appropriate for commercial forest uses. The materials attribute this to the fact that numerous residential lots were platted south of Sevenmile and Dry Creek roads before the designation of F-2 was made. Additionally, subsequent County land use decisions have allowed rural residential uses on both sides of Sevenmile Hill and Dry Creek roads. The applicant claims that the area now appears to be committed to residential uses, and no longer suitable for forestry uses. They argue that a change in the character of the neighborhood is evident, and justification for a Zone Change.

The TLSA study could be interpreted to support a conclusion that lands in this area are appropriate for rural residential uses. The TLSA evaluated lands in this area and recommended changes to some properties and not others. This property was evaluated but not rezoned. However, that was 20 years ago, and conditions continue to change. The County’s rezoning of several parcels south of Sevenmile Hill Road from F-F (10) to R-R (10) after completion of the TLSA Study, allowing development of nonfarm or forest dwellings as permitted uses supports this conclusion. The approval of dwellings in and immediately adjacent to the subject property also could support a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**APPROVAL FINDING:** To the extent the existing designation is a mistake, the proposal will effectively correct that mistake on the subject property by allowing development of residences in an area physically separated from actively managed commercial forest lands by a power line right-of-way/easement. The proposal also recognizes that the character of the neighborhood south of Sevenmile Hill Road has

changed from undeveloped forest and woodlot, to rural residential uses, and seeks to resolve existing conflicts between forest and residential uses.

DENIAL FINDING: The TLSA study was extensive in its evaluation of the Sevenmile Hill area, and ultimately concluded not to rezone the subject property, while rezoning others. The soils data, slope and other information available to staff indicate that the property is capable of being used for commercial forestry uses – although the current owners are not using the land for that purpose at this moment in time. The conversion of some properties south of the road to residential uses does not dismiss the need to hold the line somewhere between commercial forestry and single family dwellings. A conversion of this property would continue the mistake of allowing the encroachment of residential uses into resource zones in this area.

4. *Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.*

APPROVAL FINDING: This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses. Low intensity residential development would match the aesthetic surroundings of single family dwellings along both sides of Seven Mile Hill. Any risk of additional fire exposure is mitigated by County Fire Safety Standards that have been in place since 2007 and can be found in Chapter 10 of the WC LUDO.

DENIAL FINDING: An alteration from a forest use to a residential use increases the risk of fire in a fire prone area. This threatens the safety of adjacent forestry uses, as well as the encroaching residential uses in this area. In addition, the rural aesthetic of a country road would be further degraded by allowing additional dwelling development in an area full of wildlife and natural beauty. Staff finds that a consideration of these factors lends itself to maintaining this property in a resource zone rather than permitting a conversion to residential.

5. *Proof of change in the inventories originally developed.*

APPROVAL FINDING: The proof required by this section is provided by these findings and the attached exhibits. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed within, and in close proximity to the resource area, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed—demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small-scale farm and forest uses with limited density housing in a manner that promotes and improves protection of nearby forest resource lands south of the BPA easement.

DENIAL FINDING: This application asserts that due to adjacent uses being converted to residential uses, that the forest use of the subject parcel should also be changed to match. However, the encroachment of housing and incompatible residential uses into the forest zone should be halted and not encouraged in order to adequately accomplish Goal 4 objectives in this area. Staff does not feel that a "Proof of change in the inventories" has been established.

6. *Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.*

**FINDING:** As described throughout these findings, the proposed revisions are based on the TLSA study, County land use decisions in the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits.

**APPROVAL FINDING:** As evidenced by the discussion in this staff report, and the further supported by the Wasco County Comprehensive Plan, there is a public need for low-density rural residential uses, and for small scale farm and forest uses in the County generally as well as in the Sevenmile Hill area specifically. The justification for the particular change, addressed throughout these findings, is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. It is feasible to mitigate the potential impacts of fire in the area, by utilizing existing firebreaks, and imposing requirements for clustering dwellings; maintenance of fire breaks around dwellings; maintenance of adequate fire suppression water supplies, and similar practices in accordance with Chapter 10 Fire Safety Standards, of the LUDO. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

**DENIAL FINDING:** This application attempts to demonstrate that there is a public need for low-density rural residential uses, and for small scale farm and forest uses, in the County generally and in the Sevenmile Hill area specifically. The justification for the particular change is that the safety and viability of all of these uses is promoted through zoning designations that separate residential uses from commercial forestry uses and buffer each from the other. However, as discussed throughout the report, staff has determined that not enough information has been provided to support this change. That forestry/residential buffer is important to maintain and to establish this area as residential would erode it further in this area, which has already been impacted by excessive residential development affecting its water supply and putting forest reserves at risk of wildfire. The Commercial Forestry uses established by Goal 4 on this property under its current zoning are also an established public need in this County. Due to the existing potential for this property to still be used in that fashion, it has not been demonstrated or fully justified by this application and its exhibits that there is a public need for the requested change from a resource to a non-resource zone.

#### **I. Transportation Planning Rule Compliance**

1. *Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”). ‘Significant’ means the proposal would: (exclusive of correction of map errors in an adopted plan);*
  - a. *Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
  - b. *Change standards implementing a functional classification system; or*

**FINDING:** This zone change proposal from Forest, F-2 (80), to Forest-Farm, F-F (10), was initiated by the owner of the subject property, David Wilson, on forms provided to him by the planning department, which he signed. All required information was included to address criteria. This is a quasi-judicial action.

*Section 9.020 – Criteria for Decision*

*The Approving Authority may grant a zone change only if the following circumstances are found to exist:*

*A. The original zoning was the product of a mistake; or*

*B. It is established that*

*1. The rezoning will conform with the Comprehensive Plan; and,*

**FINDING:** This zone change request includes a request for a plan amendment and an exception to Goal 4. The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by this criterion. These goals are discussed above in III.A. Wasco County Comprehensive Plan where the request was found **to be to not be** in conformance. This criterion would be met because the Comprehensive Plan would be amended specifically to support the proposed zoning designation. Following amendment of the Comprehensive Plan Map, the plan designation for the subject property would be "Forest-Farm." The zone designation, "Forest-Farm," with a minimum lot size of ten acres, (F-F (10)) is a zone that conforms with the proposed plan designation.

*2. The site is suitable to the proposed zone;*

**FINDING:** This application is for a comprehensive plan amendment and a zone change from the F-2 (Forest) Zone to the F-F (Forest-Farm) zone. The Comprehensive Plan's "Definitions—Existing Land Use Map" identifies the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield." In this section, the Forest-Farm zone purpose is stated as "To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge."

The proposed zone would allow farm and forest uses (permitted outright) and dwellings (conditional use permit) and land divisions down to ten acres. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

*"The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses."*

**APPROVAL FINDING:** The Forest-Farm zone is not a resource zone. In this case, it is the most suitable designation for the subject property, which has been partially built and entirely committed to non-resource use due to its location in close proximity to a major county rural residential area, and on site existing residential uses including a single family dwelling, an unused historic dwelling, and associated outbuildings. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

The history of the area is also relevant to addressing this standard. The extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of those surrounding areas to non-resource, rural residential uses. On-going development of residences south of Sevenmile Hill and Dry Creek Road has diminished the value of those roads as a firebreak for commercial timberlands to the south. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable. The subject property is less suitable for commercial forestry than the forestland south of the subject property. The subject property is better used as a buffer between low-density rural residential uses to the north, and commercial forestry uses to the south. The most appropriate design for that buffer is: 1) allow limited housing opportunities in relatively close proximity to existing roads and development and 2) promote clustering of housing generally away from commercial forest areas allowing remaining open areas to be used for small or large scale commercial forest activities, wildlife habitat and as a buffer for those activities. The subject parcel is suitable to the proposed zone as required by Criterion.B.2.

**DENIAL FINDING:** The Forest-Farm zone is not a resource zone. A change to this zone could decrease its potential to be used as part of a commercial agriculture or timber production operation. Both uses exist in the area to the south. Additionally, the soils on this parcel are all Class 4 which, as discussed above, is capable of providing for commercial timber uses. The Green Sheets have a category for "Woodland suitability" where it addresses growth. For the two soil types on the subject property, both are listed at "4A", where 4 is the number of cubic meters/hectare/year, and A is "slight or no limitation". Four cubic meters/hectare/year is equal to 57.2 cubic feet/acre/year. This significantly exceeds the Comprehensive Plan designation that calls for those lands devoted to Forestry Uses to exceed 20 cubic feet per acre per year. The Comprehensive Plan Definition of the purpose of the Forest Farm zone makes it clear that the intent was to limit that zone designation to Class 6 or 7 soils, which are not on the subject parcel at all. Additionally, there are concerns of lowering water supply and general fire risk in this area, as discussed throughout this report. A change to a zone allowing increased density in this area would have a negative impact on both factors. This site does not appear to be suitable to the proposed zone.

3. *There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations."*

**FINDING:** This application is for a goal exception and zone change from F-2 to F-F. The effective result of an approval would be a maximum of three additional single family dwellings, if this land was divided and developed. The TLSA study investigated the suitability of the area for residential needs, including "the availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area," all important factors to consider in this area when it comes to public welfare. The proposal is designed to provide an appropriate buffer between low-density rural residential, forest and farm uses on the one hand (to the north, east and west), and commercial forestry uses on the other (to the south). The "specific zoning" includes the Forest-Farm zone with a ten acre minimum lot size, clustering to a density not to exceed one dwelling for every ten acres. The potential three new dwellings would be required to comply with the fire safety standards for

development set out in Chapter 10 of the Wasco County LUDO, as well as any other applicable requirements of law pertaining to health, safety, and welfare, such as building codes or public health requirements. **The exhibits and record of this proceeding support a finding of compliance with this requirement.**

However, any addition of new residences increases fire risk due to human activity. Seven Mile Hill Road makes an excellent fire buffer, and almost all of the rural residential development in the area is to the north of it. Currently there are other residential developments south of the road to both the east and west of the Subject Parcel, but their existence does not justify approving even more risk in this area. Seven Mile Hill should remain as a buffer for fire in this area. Additionally, there has been an identified risk to ground water in the area as the water table has been gradually lowering in recent years, according to Robert Wood, Watermaster. Three additional residences and their wells would further accelerate that loss. Due to these two main concerns related to public safety and welfare in this area, this request should be denied.

#### *Section 9.030 - Transportation Planning Rule Compliance*

*A. Review of Applications for Effect on Transportation Facilities - A proposed zone change or land use regulation change, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule – “TPR”).*

*“Significant” means the proposal would:*

- 1. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);*
- 2. Change standards implementing a functional classification system; or*
- 3. As measured at the end of the planning period identified in the adopted transportation system plan:*
  - a. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;*
  - b. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or*
  - c. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.*

**FINDING:** The application for a zone change of one 40.6 acre property with an existing dwelling from F-2 to F-F (10 acre minimum) would have the maximum potential of adding three new single family dwellings. As discussed above in the Background section, the Planning Department prepared a memorandum to the County Court (Board of Commissioners) dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing (See Exhibit 1 for full TLSA report). A 1998 TLSA memo contained the following statistics (Exhibit 2, p. 7)):

## ZONE CHANGE APPLICATION

Date Received: \_\_\_\_\_ Planner Initials: \_\_\_\_\_ Date Complete: \_\_\_\_\_ Planner Initials: \_\_\_\_\_

### Current Zoning

Comprehensive Plan Map Designation: FOREST

Zoning Designation: F.2 (80)

### Proposed Zoning

Comprehensive Plan Map Designation: FOREST- FARM

Zoning Designation: F.F (10)

Total Acreage to be Rezoned: 40.10

### FINDINGS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed change?
2. Describe how the original zoning was the product of a mistake; or
3. Establish that:
  - a. The rezoning will conform with the Comprehensive Plan (including but not limited to all applicable goals and policies); and,
    - Goal 1: Citizen Involvement
    - Goal 2: Land Use Planning
    - Goal 3: Agricultural Lands
    - Goal 4: Forest Lands
    - Goal 5: Open Spaces, Scenic and Historic Areas and Natural Resources
    - Goal 6: Air, Water and Land Resources Quality
    - Goal 7: Areas Subject to Natural Disasters and Hazards
    - Goal 8: Recreational Needs
    - Goal 9: Economy of the State
    - Goal 10: Housing
    - Goal 11: Public Facilities and Services
    - Goal 12: Transportation
    - Goal 13: Energy Conservation
    - Goal 14: Urbanization

- b. The site is suitable to the proposed zone (taking into consideration among other things slope, access, flooding, traffic, availability of public facilities and services, and impact to adjacent properties); and
  - c. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.
4. What effect would the proposed change have on surrounding properties? Include a description of the existing land uses within 1,000 feet of the proposed zone change.
  5. Is there a public need or demand to support this requested zone change? ☐ No ☐ Yes. If YES, please describe.
  6. Fire Safety. If converting Farm or Forest zoned land to a non-resource zone, include an analysis of how future division and residential development could meet fire safety standards.
  7. Any other information which may add to the viability of the request.

---

#### SITE INFORMATION

The following maps shall be required for a complete application:

**Zoning Map:** Show area of proposed re-zoning.

**Soils Map:** If converting Forest or Farm zoned land to a non-resource zone include a soils map. These are available at the Wasco County GIS Department or the Farm Services Agency.

**Site Plan Map for the area to be rezoned and lands within at least 1000' that includes the following:**

- ☐ North Arrow
- ☐ Scale
- ☐ Boundaries or properties proposed to be rezoned (dimensions)
- ☐ All waterways, wetlands, noticeable landforms and drainage of property
- ☐ Structures (including dwelling, accessory buildings, barns, walls and fences) with location and size
- ☐ Utilities (existing)
  - Electric/Communication corridors including poles
  - Septic tanks & drain fields (primary and reserve)/Wells and supply lines
- ☐ All points of ingress and egress (roads and driveways) and whether they are public or private with their length, width and surface type
- ☐ Significant terrain features and land forms including slopes over 20%

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Zone Change will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set. A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

**PLANNING DEPARTMENT**

## COMPREHENSIVE PLAN AMENDMENT

Date Received:	Planner Initials:	Date Complete:	Planner Initials:
<b>PROPOSED CHANGE</b>			

Indicate specific Comprehensive Plan section(s) or element(s) proposed to be amended or added:

Amend Comprehensive Plan to re-zone tax lot 2N 12E 22 4400 from F-2(80) to F-F(10)

---

---

---

---

### FINDS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed change?
2. A landowner or their representative may only initiate a quasi-judicial plan amendment. Describe how the proposal meets the standard of a quasi-judicial amendment and not a legislative amendment.

Quasi-Judicial revisions are those which do not have significant effect beyond the immediate area of the change, i.e., narrow in scope and focusing on specific situations.

Legislative revisions include land use changes that have widespread and significant impact beyond the immediate area such as quantitative changes producing large volumes of traffic; a qualitative change in the character of the land use itself, such as conversion of residential to industrial use; or a spatial change that affects large areas or much different ownership.

3. The amendment will be in compliance with the statewide land use goals as provided by the Land Conservation and Development Commission, where applicable and substantial proof that such change shall not be detrimental to the spirit and intent of such goals. These goals include:

Goal 1: Citizen Involvement  
Goal 2: Land Use Planning  
Goal 3: Agricultural Lands  
Goal 4: Forest Lands  
Goal 5: Open Spaces, Scenic and Historic Areas  
and Natural Resources  
Goal 6: Air, Water and Land Resources Quality  
Goal 7: Areas Subject to Natural Disasters and Hazards

Goal 8: Recreational Needs  
Goal 9: Economy of the State  
Goal 10: Housing  
Goal 11: Public Facilities and Services  
Goal 12: Transportation  
Goal 13: Energy Conservation  
Goal 14: Urbanization

4. Demonstrate there was a mistake in the original comprehensive plan or change in the character of the neighborhood.
  5. Address factors which relate to the public need for healthful, safe and aesthetic surrounding and conditions.
  6. Include proof of change in the inventories originally developed.
  7. Amendment shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established. Provide additional studies and established need to justify the amendment.
- A response (findings of fact) to each of the questions above has been submitted? ☐ No ☒ YES

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Comprehensive Plan Amendment will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set.

A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

## GOAL EXCEPTION APPLICATION

Date Received:

Planner Initials:

Date Complete:

Planner Initials:

### PROPOSED EXCEPTION

Indicate the Goal(s) for which the exception is requested:

Goal 4 - Forest Lands

### FINDINGS OF FACT

The following shall be addressed by the applicant. Response (findings of fact) to the following questions shall be typewritten and attached to the application.

1. What is the purpose of the proposed goal exception?
2. Is there a public need or demand to support this requested Goal Exception? ☐ No ☐ Yes. If YES, please describe.
3. An exception is a decision to exclude certain land from the requirements of one or more applicable statewide goals. Goal Exceptions fall into three categories: Physically Developed; Irrevocably Committed; and Reasons.

Indicate which type of goal exception is being proposed and include findings for the review criteria listed below and any additional referenced criteria. These are directly from Oregon Administrative Rule and are available at [http://arcweb.sos.state.or.us/rules/OARS\\_600/OAR\\_660/660\\_004.html](http://arcweb.sos.state.or.us/rules/OARS_600/OAR_660/660_004.html). Oregon Revised Statute criteria are available at <http://landru.leg.state.or.us/ors/>

a. Exception Requirements for Land Physically Developed to Other Uses

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**b. Exception Requirements for Land Irrevocably Committed to Other Uses**

- (1)** A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a)** A "committed exception" is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b)** For the purposes of this rule, an "exception area" is that area of land for which a "committed exception" is taken;
  - (c)** An "applicable goal," as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.
- (2)** Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:
  - (a)** The characteristics of the exception area;
  - (b)** The characteristics of the adjacent lands;
  - (c)** The relationship between the exception area and the lands adjacent to it; and
  - (d)** The other relevant factors set forth in OAR 660-004-0028(6).
- (3)** Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(1)(b), in Goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is "impossible." For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable:
  - (a)** Farm use as defined in ORS 215.203;
  - (b)** Propagation or harvesting of a forest product as specified in OAR 660-033-0120; and
  - (c)** Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).
- (4)** A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area.
- (5)** Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.
- (6)** Findings of fact for a committed exception shall address the following factors:
  - (a)** Existing adjacent uses;
  - (b)** Existing public facilities and services (water and sewer lines, etc.);
  - (c)** Parcel size and ownership patterns of the exception area and adjacent lands:
    - (i)** Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities) on the resulting parcels or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive commercial agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels;

- (ii) Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land's actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownerships are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.
  - (d) Neighborhood and regional characteristics;
  - (e) Natural or man-made features or other impediments separating the exception area from adjacent resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;
  - (f) Physical development according to OAR 660-004-0025; and
  - (g) Other relevant factors.
- (7) The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.
- (8) The requirement for a map or aerial photograph in section (7) of this rule only applies to the following committed exceptions:
  - (a) Those adopted or amended as required by a Continuance Order dated after the effective date of section (7) of this rule; and
  - (b) Those adopted or amended after the effective date of section (7) of this rule by a jurisdiction with an acknowledged comprehensive plan and land use regulations.
- c. Reasons Necessary to Justify an Exception Under Goal 2, Part II(c)  
 An exception Under Goal 2, Part II(c) can be taken for any use not allowed by the applicable goal(s). The types of reasons that may or may not be used to justify certain types of uses not allowed on resource lands are set forth in the following sections of this rule:
  - (1) For uses not specifically provided for in subsequent sections of this rule or in OAR 660-012-0070 or chapter 660, division 14, the reasons shall justify why the state policy embodied in the applicable goals should not apply. Such reasons include but are not limited to the following:
    - (a) There is a demonstrated need for the proposed use or activity, based on one or more of the requirements of Goals 3 to 19; and either
    - (b) A resource upon which the proposed use or activity is dependent can be reasonably obtained only at the proposed exception site and the use or activity requires a location near the resource. An exception based on this subsection must include an analysis of the market area to be served by the proposed use or activity. That analysis must demonstrate that the proposed exception site is the only one within that market area at which the resource depended upon can reasonably be obtained; or
    - (c) The proposed use or activity has special features or qualities that necessitate its location on or near the proposed exception site.
  - (2) Rural Residential Development: For rural residential development the reasons cannot be based on market demand for housing, except as provided for in this section of this rule, assumed continuation of past urban and rural population distributions, or housing types and cost characteristics. A county must show why, based on the economic analysis in the plan, there are reasons for the type and density of housing planned which require this particular location on resource lands. A jurisdiction could justify an exception to allow residential development on resource land outside an urban growth boundary by determining that the rural

location of the proposed residential development is necessary to satisfy the market demand for housing generated by existing or planned rural industrial, commercial, or other economic activity in the area.

- (3) Rural Industrial Development: For the siting of industrial development on resource land outside an urban growth boundary, appropriate reasons and facts include, but are not limited to, the following:
- (a) The use is significantly dependent upon a unique resource located on agricultural or forest land. Examples of such resources and resource sites include geothermal wells, mineral or aggregate deposits, water reservoirs, natural features, or river or ocean ports; or
  - (b) The use cannot be located inside an urban growth boundary due to impacts that are hazardous or incompatible in densely populated areas; or
  - (c) The use would have a significant comparative advantage due to its location (e.g., near existing industrial activity, an energy facility, or products available from other rural activities), which would benefit the county economy and cause only minimal loss of productive resource lands. Reasons for such a decision should include a discussion of the lost resource productivity and values in relation to the county's gain from the industrial use, and the specific transportation and resource advantages which support the decision.
- (4) Expansion of Unincorporated Communities: For the expansion of an Unincorporated Community defined under OAR 660-022-0010(10), appropriate reasons and facts include but are not limited to the following:
- (a) A demonstrated need for additional land in the community to accommodate a specific rural use based on Goals 3-19 and a demonstration that either:
    - (i) The use requires a location near a resource located on rural land; or
    - (ii) The use has special features necessitating its location in an expanded area of an existing unincorporated community, including:
      - (a) For industrial use, it would have a significant comparative advantage due to its location (i.e., near a rural energy facility, or near products available from other activities only in the surrounding area; or it is reliant on an existing work force in an existing unincorporated community);
      - (b) For residential use, the additional land is necessary to satisfy the need for additional housing in the community generated by existing industrial, commercial, or other economic activity in the surrounding area. The plan must include an economic analysis showing why the type and density of planned housing cannot be accommodated in an existing exception area or UGB, and is most appropriate at the particular proposed location. The reasons cannot be based on market demand for housing, nor on a projected continuation of past rural population distributions.
  - (b) Need must be coordinated and consistent with the comprehensive plan for other exception areas, unincorporated communities, and UGBs in the area. Area encompasses those communities, exception areas, and UGBs which may be affected by an expansion of a community boundary, taking into account market, economic, and other relevant factors;
  - (c) Expansion requires demonstrated ability to serve both the expanded area and any remaining infill development potential in the community at time of development with the level of facilities determined to be appropriate for the existing unincorporated community.
- (5) Expansion of Urban Unincorporated Communities: Expansion of an urban unincorporated community defined under OAR 660-022-0010(9) shall comply with OAR 660-022-0040.

---

#### REVIEW PROCESS

Before this application will be processed, you must supply all the requested information pursuant to the attached instructions. Pursuant to ORS 215.427 this office will review the application for completeness and notify the applicant of any deficiencies within 30 days of submission. If you have questions, the following pages provide directions and helpful information in order to complete the application. Other questions can be addressed in the pre-application conference.

A request for a Goal Exception will be reviewed by the Wasco County Planning Commission at a public hearing. Upon receipt of a completed application, hearing dates will be set.

A recommendation on the proposal will be made by the Planning Commission and forwarded to the Wasco County Board of Commissioners where a final decision will be issued.

The decision of the Board of Commissioners may be appealed to the Land Use Board of Appeals (LUBA). Information regarding appeals to LUBA is available at the Wasco County Planning Department.

In case of Appeal: Written notice of the appeal must be filed with the Planning Director, within twelve (12) days of the subject decision. Forms are available at the Wasco County Planning Department.

---

P:\Development Applications\GoalException.docx

Last Updated 7/13/2017

**TO:** WASCO COUNTY PLANNING COMMISSION

**FROM:** WASCO COUNTY PLANNING & ECONOMIC  
DEVELOPMENT OFFICE

**SUBJECT:** Request for Comprehensive Plan Amendment and Zone Change for a single 40  
acre parcel in the Sevenmile Hill Area Committed to Residential Use; Exception  
to Goal 4.

**HEARING DATE:**

**APPLICANT:** David Wilson

**NATURE OF REQUEST:**

The request is for:

- Amendment to the County's Comprehensive Plan and plan map establishing an exception to Goal 4, "Forest Lands," for Applicant's tax lot 4400 consisting of 40.10 acres; and
- A change in the zone designation of tax lot 4400 from F-2 (80) "Forest Use" to F-F (10) "Forest-Farm."

**RECOMMENDATION:** The Planning Office recommends that the Planning Commission approve the request for a zone change, comprehensive plan amendment, and exception as set forth below. The subject property is both physically developed and irrevocably committed to non-forest uses, because residential uses both on and surrounding the subject property make forest uses impracticable. The criteria for the requested zone and plan changes are met, as explained in this submittal and the attached Exhibits.

## **BACKGROUND INFORMATION**

### **PROPERTY OWNERS:**

This request is for tax lot 2N 12E 22 4400, owned by applicant David Wilson, as shown on the maps in Exhibit 1. Tax lot 4400 is a legally created lot of record, and is referred to in this submittal as the “subject property.”

### **COMPREHENSIVE PLAN AND ZONING DESIGNATIONS:**

The subject property is designated forest use on the comprehensive plan map and currently zoned F-2 (80) for forest use.

### **PUBLIC FACILITIES AND SERVICES:**

#### Transportation

The subject property lies south of Sevenmile Hill Road at the point where it intersects with Old Sevenmile Hill Road and Richard Road. At the point of the intersection of Sevenmile Hill Road and Dry Creek Road, and proceeding toward the northwest from the intersection, Sevenmile Hill Road becomes State Road. The primary access to the subject property is from Sevenmile Hill Road.

From the records of the Wasco County Road Department, State Road/Sevenmile Hill Road is a Functional Class RC Rural Major Collector with a 2009 ADT of 480 and a V/C Ratio of 0.01 [Data taken from Wasco County Transportation System Plan, 2009] The Planning Office prepared a memorandum to the County Court dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing. The TLSA memo listed a capacity for State Road/Sevenmile Hill Road of 1,500/day.

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use 210). The proposed zone change could potentially add 3 dwellings to the area's traffic load, producing 29 daily trips at maximum buildout. The addition of those trips to the existing ADT would result in 509 daily trips for the area. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of 3 dwellings would not cause the V/C ratio to rise above 0.5. Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the county used the ODOT mobility standard of 0.70 as a comparison figure. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

#### Water and Sewer

There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A

Geologic Survey was published in 1996 as part of the TLSA study (see below under general history and prior land use actions) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Appendix 4 to the TLSA -- Ground Water Evaluation and Background Materials ("Groundwater Study") at pages 12-13.)

The predominant source of water in this area is from wells, and there is a well on the subject property serving the existing residence and associated accessory buildings. The general conclusion of the Groundwater Study is that this area has capacity to support additional residential development. See additional findings below regarding the TLSA study.

There are no public sewer facilities available in the area. Each residence would be required to handle its own sewage as required by law. At the permitting stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

#### Electricity

Power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence and associated accessory buildings located on the subject property.

#### Fire Protection and Prevention

The subject property is within the Mid-Columbia Fire and Rescue District (Structural) and Oregon Department of Forestry (Wildfire). The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies.

### **GENERAL HISTORY AND PRIOR LAND USE ACTIONS:**

In 1993, Wasco County began work on the Transition Lands Study Area Project ("TLSA") in response to concerns about development in northern Wasco County, and particularly in the area surrounding the subject property, which area is known as the Sevenmile Hill area. The concerns included "availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area."

The first phase of the project was a groundwater study. The initial study was published in December 1996 as the "TLSA Ground Water Evaluation, Wasco County, Oregon" by Jervey Geological Consulting (The Groundwater Study"). On September 12, 1997, the final report for the

TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the subject property was rated "L/H," meaning that it scored low for Resource Values and high for Development Values.

The final Recommendation of the TLSA for the Sevenmile Hill area included:

- Retain the existing R-R(5) and A-1 (80) EFU zoning
- Retain the existing R-R(5) and A-1 (80) EFU zoning .
- Retain the existing F-F(10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F(10) lands to R-R(10). F-F(10) areas would be able to transfer development rights to the area identified as the test area.

As a result of the TLSA study, eight parcels of F-F(10) land in the Sevenmile Hill area north of the subject property were converted to R-R(10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). In recent years the County has approved single family dwellings that have subsequently been built on nearly every lot surrounding the subject property.

Additional detailed area history is contained in Section 2 of this submittal.

## **JUSTIFICATION FOR REQUEST:**

### **1. Wasco County Comprehensive Plan Revision Procedures and Standards.**

- 1.1. The Comprehensive Plan's "Definitions-Existing Land Use Map" identify the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield."
- 1.2. This request is to change the classification of the subject property on the planning map to "Forest-Farm:" "Purpose: To provide for the continuation of forest and farm uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge."

1.3. The following provisions apply and are addressed in the following sections.

1.4. Chapter 11 of the Comprehensive Plan establishes procedures and standards for revision of the plan and plan map. This request requires amendment of the text of the plan, to justify an exception to Goal 4, and an amendment to the plan map to designate the subject property for Forest-Farm (non-resource) uses.

1.5. Chapter 11 states that a comprehensive plan revision may be initiated by the property owner or his authorized representative. This amendment has been initiated by property owner David Wilson.

1.6. The proposal is quasi-judicial in character, and hearings in this matter are being conducted with quasi-judicial procedures and safeguards. Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615. (See attached Exhibit \_\_)

### **1.7. General Criteria for a Plan Amendment.**

Subsection H. of Chapter 11 of the comprehensive plan states:

“The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:

1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.
2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.
3. A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.
4. Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.
5. Proof of change in the inventories originally developed.
6. Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.”

**1.7.1** As set forth by the County Court in Exhibit B of the Big Muddy Ranch – Young Life Youth and Family Camp Exception (September 1997), these are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission need only consider these criteria and determine whether they are generally satisfied.

**1.7.2** The following findings demonstrate compliance with statewide land use planning goals that may apply to the request, as required by subsections 1 and 2 of the plan amendment general factors:

Goal 1 - Citizen Involvement. The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures. These proceedings are being conducted with notice and hearings with opportunity for public input as required by law and local ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable Plan and zoning ordinance provisions.

Goal 2 - Land Use Planning. The purpose of Goal 2 is “to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.” The County's planning process has been acknowledged as being in compliance with the goals, and was followed in consideration of the proposal. An adequate factual base is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal also complies with Goal 2 requirements for the adoption of exceptions to a statewide goal, in this case, Goal 4. The proposal complies with Goal 2.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses, although small scale (non-commercial) farm uses are possible in the area. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal; however small-scale farming activities possible in the area are promoted by the allowance of the proposal.

Goal 4 - Forest Lands. Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land. The intention of this proposal is to accurately reflect the nature of the subject property by changing the zoning to F-F(10). Because Goal 4 applies, and the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4. The exception is justified in part 2 of this narrative addressing LCDC's administrative rule requirements for “physically developed” and “irrevocably committed” exceptions.

Goal 5 -Open Spaces, Scenic and Historic Areas, and Natural Resources. Goal 5 is to protect natural resources and conserve scenic and historic areas and open spaces. The county zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the county. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 - Air, Water, and Land Resources Quality. Goal 6 is "To maintain and improve the quality of the air, water and land resources of the state." The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is "To protect people and property from natural hazards." Goal 7 calls for local governments to adopt measures "to reduce risk to people and property from natural hazards." The subject property is not within any of the areas identified as being subject to natural disaster. The proposal complies with Goal 7.

Goal 8 –Recreational Needs. Goal 8 is "To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts." If the zoning is changed to F-F(10), "Parks, playgrounds, hunting and fishing preserves and campgrounds" would be allowed as conditional uses within the exception area. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is "To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens." The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

Goal 10 – Housing. Goal 10 is "To provide for the housing needs of citizens of the state." The rule is directed to lands in urban and urbanizable areas. However, the proposal will allow development of additional homes in an area that is already built and irrevocably committed to residential uses. Consistent with Goal 10, the proposal will improve housing opportunities in an area where such uses are appropriate.

Goal 11 - Public Facilities and Services. Goal 11 is “To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.” In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as water and sewer services are not considered necessary or appropriate. Public roads are available and adequate. Local fire and police services are provided by Mid- Columbia Fire and Rescue Department and the Wasco County Sheriff's Office. Neither water nor sewer services are provided to the area, but both are available on the subject property through individual well and septic tank systems. Electric and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres) is less than the maximum density recommended by the TLSA study. The proposal complies with Goal 11.

Goal 12 - Transportation. Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The proposal will have little if any impact on the transportation system serving the subject property because there will be a minimal increase in traffic generated by development that might occur as a result of the plan amendment and zone change. Current estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.01. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads.

In connection with Goal 12, the County is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is in conformance with Goal 12 and the Goal 12 rule.

Goal 13 - Energy Conservation. Goal 13 is “To conserve energy.” Policy 3 directs the County to minimize energy consumption through the use of zoning and subdivision standards. In this case, Goal 13 is promoted by encouraging development near existing residential development and along established roads. The proposal conforms with and promotes Goal 13.

Goal 14 - Urbanization. Goal 14 is to “provide for an orderly and efficient transition from rural to urban land use.” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the

area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No decidedly “urban” services will be required to allow the maximum amount of development contemplated by this proposal. Water is available in the area in sufficient quantities to serve the proposed housing density (see Groundwater Evaluation). The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 do not apply.

**1.7.3** As noted above, subsection 3 of the County's plan revision factors requires consideration of whether: “A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.” As outlined in detail in the subsequent sections of this discussion, the subject property is the only parcel which touches Sevenmile Hill Road which is currently in resource zoning. The subject property is for all intents and purposes surrounded completely by residential development. It is not producing any marketable timber, and as outlined in the subsequent sections of this submittal, is unlikely to do so in the future. Comprehensive Plan Chapter 14 -- Findings and Recommendations outlines the anticipated uses for lands zoned F-2(80) as follows: “The ‘F-2 (40)’ and ‘F-2 (80)’ forest zones have very limited permitted uses and conditional uses that are generally compatible with primary timber management. Due to the high cost of these lands, the forty (40) and eighty (80) acre minimum lot sizes will be more than adequate to keep them in forest uses. Most of the lands zoned “F-2 (80)” is in either the Mt. Hood National Forest, White River Game Management Area or are private timber company holdings. These lands are adequately managed for forest, recreational and open space uses.”

Merriam-Webster's defines “mistake” as “to identify wrongly; confuse with another” or “a misunderstanding of the meaning or implication of something.” This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the subject property are more appropriate than the original designations. Based on the materials in this submittal, the County's original characterization of the area as most appropriate for commercial forest uses appears to have been incorrect. The area now appears not to be suitable for forestry uses, but to be more suitable for rural residential use. The TLSA study supports a conclusion that the original comprehensive plan was incorrect, and that the most appropriate zoning of the property is F-F(10), allowing for rural residences. The County's rezoning of several parcels north of Sevenmile Hill Road from F-F(10) to RR-10, allowing development of nonfarm or forest dwellings as uses permitted outright, also supports this conclusion. The approval of dwellings on, around, and immediately adjacent to the subject property also supports a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**1.7.4** As noted above, subsection 4 of the County's plan revision factors requires consideration of "Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions." This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses.

**1.7.5** As noted above, Subsection 5 of the County's plan revision factors requires consideration of "Proof of change in the inventories originally developed." The proof required by this section is provided by these findings, the attached exhibits, and testimony and evidence obtained by the County through the hearing process. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed on, and in close proximity to the subject property, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed-demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small scale farm and forest uses with limited density housing in a manner that is consistent with adjacent uses and which is compatible to those forest resource lands nearby.

**1.7.6** Subsection 6 of the County's plan revision factors states: "Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established." As described throughout these findings, the proposed revisions are based on the TLSA study, previous County land use decisions affecting the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits. These materials, and the County's plan, demonstrate that there is a public need for low-density rural residential uses and for small scale farm and forest uses in the county generally and in the Sevenmile Hill area. The justification for the particular change, addressed throughout these findings, is that the subject property is more properly designated for low density residential use than for commercial forestry uses. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

## **1.8 Transportation Planning Rule Compliance**

Subsection I. of Chapter 11 of the comprehensive plan states:

"1. Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule - "TPR"). 'Significant' means the proposal would:

a. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);

b. Change standards implementing a functional classification system; or

c. As measured at the end of the planning period identified in the adopted transportation system plan:

1. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

2. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or

3. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

2. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:

a. Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.

b. Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.

c. Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.

d. Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.

3. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance.”

**1.8.1** A separate Traffic Impact Analysis is not required for this proposal because there is not a “significant impact” under the TPR (OAR 660-12-0060(1)).

## 1.9 Procedures for a Plan Amendment.

Subsection J. of Chapter 11 of the Comprehensive Plan states, in relevant part:

1. A petition must be filed with the Planning Offices on forms prescribed by the Commission.
2. Notice of a proposed revision within, or to, the urban growth boundary will be given to the appropriate city at least thirty (30) days before the County public hearing.
3. Notification of Hearing:
  - 1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.
  - 2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.
  - 3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.
  - 4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.
  - 5) Upon receiving the Planning Commission's recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties."

These procedures and all other applicable statutory and local procedures have been or will be followed in consideration of the proposal.

## 2. Justification for Taking an Exception to Goal 4:

### 2.1 Introduction.

In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm, and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197.932(1) states, in relevant part:

"(1) A local government may adopt an exception to a goal if:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]

(b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;

\* \* \*

(4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (1) of this section have or have not been met.

(5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.

\* \* \*

(8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:

(a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;

(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and

(c) Complies with standards under subsection (1) of this section.”

**2.1.1** In like manner, Planning Goal 2, part II, states, in relevant part:

“A local government may adopt an exception to a goal when:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”

**2.1.2** Both the goal and the rule adopt the legislative definition of an exception with minor variation-subsection (c) is modified in the goal to state “Complies with standards for an exception” and in the rule to state “Complies with the provisions of this Division.” OAR 660-004-0010 states that the “process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” including: “Goal 4 Forest Lands.”

**2.1.3** Goal 4 provides that:

“Where a \* \* \* plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

**2.1.4** Rule definitions of “resource land” and “non-resource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be plan and zone designated for forest-farm uses, a rural residential, non-resource category of uses under the County's plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC's rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state's forest land base.

## 2.2 Exception Requirements for Land Physically Developed to Other Uses.

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

OAR 660-004-0025 states:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)
- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** The proposed exception area consists of a 40.10 acre piece identified as tax lot 4400 located in T2N, R12E, and in the southwestern quarter of Section 22 (the subject property). The north line of the subject property abuts Sevenmile Hill Road, and the northwest corner of the subject property is at the intersection of Sevenmile Hill Road and Old Sevenmile Hill Road. The subject property is rectangle measuring roughly 1,600 feet east/west and 1,500 north south. It is generally sloping downward to the north, with the northern boundary along Sevenmile Hill Road as the low point.

The subject property is improved with a log home with surrounding decks covering approximately 2,680 ft<sup>2</sup> and a 720 ft<sup>2</sup> basement located approximately halfway between the north and south boundaries and in the western one third of the property. A driveway serving the residence and properties to the south extends from the northwest corner of the subject property southward, generally paralleling the western boundary. There are two barns with stalls located generally east of the log home, each covering approximately 1,110 ft<sup>2</sup> for total coverage of 2,220 ft<sup>2</sup>.

Further east of the hay loft and barn there is an original home site with cabin covering 1,980 ft<sup>2</sup> located generally east of the log home. There is an old barn located south of the cabin covering 1,200 ft<sup>2</sup>.

The log home was built pursuant to a conditional use permit, the conditions of which required decommissioning the original cabin as a residential structure; however, the cabin legally exists and may be used for other uses consistent with the existing zoning.

A good portion of the southeastern portion of the subject property consists of a cleared area growing grass hay which previously served as a pasture for the cabin and now is baled each year. Most of the northern two thirds of the subject property has been cleared at some point in the past and remains clear at this time. There is no merchantable timber on the property, and the property has never supported merchantable timber. There are scrub oaks and pine trees growing on the southern portion and eastern boundary of the property. There are no fir trees of any size larger than a seedling on the property, and historically firs do not survive. Grasses and shrubs create moderately dense underbrush.

Soils on the subject property are Class 4, predominately 49C and 50D Wamic Loam, 5-12% slope. This soil type represents more gently sloping areas where the exposure is toward the north. On the subject property, this particular range of the soil class is characterized by smaller oak and scattered pine forest. These soils are suitable for dry farm small grain, grass hay, and pasture. The woodland site index designation of 70 for Ponderosa Pine indicates low productivity with no significant limitations or restrictions. This capability class is also designated under the pine-oak-fescue range and as such it is possible that it could be used for fruit orchards or other crops. In its uncultivated state, however, special management is required to reduce oak and shrub growth that will curtail stabilizing plant growth beneath what amounts to a thin, mainly pine canopy.

The area has no history of crop use with the exception of grass hay grown the pasture area. Due to the terrain and rocky soil, and because the elevation creates climatic extremes, crop agriculture is uneconomical and otherwise impracticable.

The subject property does not have a history of commercially successful grazing for sheep or cattle. Grazing was occasionally tried in the area in the 1940's, but the terrain, thin soil and climate have limited the activities to an occasional attempt rather than a sustained commercial success. There are no properties in the immediate area being used for commercial grazing.

Although the soils on the subject property could, at first glance, appear to indicate a potential for agricultural use, particularly small-scale orchards, that potential is severely reduced due to climatic conditions. The subject property is in current use for a residence, along with pasture and wildlife habitat in the scrub oak section. It has never been successfully utilized for agricultural purposes and has very limited value as forestland due to the dwellings on the site. The soils indicate low timber productivity. There are no productive orchards or other agricultural uses in the area immediately surrounding the subject property.

The residential development surrounding the subject property has occurred mainly in proximity to Sevenmile Hill Road that runs along the northern boundary of the subject property. Because of this development and ownership pattern, and because of the small average and odd shaped lot sizes, it would be impracticable to manage any of the property in the area as a commercial forestry operation or as part of such an operation.

## 2.3 Exception Requirements for Land Irrevocably Committed to Other Uses.

OAR 660-004-0028 contains standards for adoption of an “irrevocably committed” exception.

### 2.3.1 OAR 660-004-0028(1) provides:

- (1) “A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;
  - (c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.

**FINDING:** The subject property contains a legal residence, and is surrounded on 2 sides by small residential tracts, and by a residence to the south. The subject property is irrevocably committed to non-resource use. All of the large forested tracts currently producing merchantable timber are located well south of the subject property, and adopting this exception for the subject property will not negatively impact those uses.

### 2.3.2 OAR 660-004-0028(2) provides: “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:

- (a) The characteristics of the exception area;”

**FINDING:** The characteristics of the subject property are fully discussed in the findings above in response to OAR 660-004-0025 (Physically Developed).

### 2.3.3 (b) “the characteristics of the adjacent lands;”

#### **FINDING:**

In general, the areas to the East and North of the subject property have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the three subdivisions in the immediate area of the subject parcel, two were platted in the early part of the 20th century, and the third in 1979 (Fairmont Orchard Tracts-1911;

Sunnydale Orchards-1912; Flyby Night Subdivision-1979). The majority of the lots in these subdivisions are approximately 5 acres in size. The County has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Specific adjacent lands analysis is as follows:

**East:** Directly to the east of and abutting the subject parcel are two parcels zoned F-F(10): T2N R12E, Section 22, Lots 4300 and 4200. Both of these lots have residences.

Properties further east along Wits End Drive and Sevenmile High South Road are zoned R-R(10) and all have residences (tax lots 3600, 3400, 3800, 3900, 4000). These properties average approximately 5 acres in size and are part of the Fairmont Orchard Tracts subdivision which was platted in 1911.

**North:** To the north of the subject property across Sevenmile Hill Road is a lot zoned R-R(5), Tax Lot 4600 (7.35 ac.), and a small lot owned by Wasco County (Tax Lot 4500, .7 acres). 4600 has a residence. Tax Lot 4700 meets the subject property on its northeast corner, is zoned F-F(10), and has a residence.

Properties north of the subject property lying along Richard Road are small acreages zoned R-R(5), all with residences.

All of the area north of the subject property is built and committed to low and medium density rural residential uses. There are two platted subdivisions: Sunnydale Orchards, platted in 1912, and Flyby Night, platted 1979.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less than ten acres each. The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions. The zoning for the Flyby Night subdivision is R-R(5).

The areas to the north and east are the most heavily developed areas surrounding the subject property. As can be seen by the maps in Exhibits 1, virtually all lots to the north and east of the subject property have been improved with a residence or a manufactured home.

The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

**West:** Tax lot 2N 10E 21 900, which abuts the west property line of the subject parcel, is split zoned, with the northern portion which abuts Sevenmile Hill Road zoned F-F(10) and the southern portion zoned F-2(80). The southern portion has not been commercially logged, and is slowly being cleared. Tax Lot 2900, a 439 acre parcel, abuts the southwest portion and corner of the subject property and is zoned F-2(80). It has a residence located on the western portion along Osburn Cutoff Road. This property has a creek running generally north-south which forms a clear line of demarcation between the more vibrant, productive land to the west and the scrubrier soils to the east. The land west of the creek supports the growth of Douglas Fir trees; the land to the east is predominantly scrub oak and pine similar to the subject property. The commercial logging on this piece has been confined to the area west of the creek.

In general, the parcels to the west of the subject property lying both north and south of and abutting Sevenmile Hill Road consist of small acreages zoned F-F(10), almost all improved with residences.

The subject property is the only parcel which touches Sevenmile Hill Road which is zoned F-2(80). The only other parcels similarly zoned which touch any road are large, unimproved parcels located well west of the subject property which lie south of and touch Dry Creek Road or which lie along Osburn Cutoff Road.

**South:** Tax lot 2N 10E 22 4100 abutting the subject property to the south is zoned F-2(80). It is owned by the owner of the subject property, and has a legal residence, and together with tax lot 2800 to the south, also in common ownership, comprises approximately 70 acres. It is not used for timber production. This parcel is transected by the BPA Bonneville-The Dalles power line right-of-way/easement, which forms a natural boundary between this parcel and the larger, commercially forested tracts to the south.

**Soils:** The subject property soils are 49C and 50D Wamic Loam. The parcels immediately north of the subject property are generally 51D Wamic Loam soils. Adjacent properties to the south and east are 49C and 50D, like the subject property. (See soils maps and productivity indices) 49C and 50D soils both have a site index of 70 for Ponderosa Pine, indicating a potential yield of 20-49 cubic feet per acre. However, with the exception of the 439 acre parcel adjoining the southwest corner of the subject property, none of the adjacent properties are supporting commercial timber production, and logging on the 439 acre parcel takes place west of the creek which runs parallel to the common boundary. All commercial timber production occurs well south of the subject property, generally south of the BPA power line transecting the area. The subject property has never produced merchantable timber or been logged commercially.

#### 2.3.4 (c) The relationship between the exception area and the lands adjacent to it;

**FINDING:** As described in the preceding sections of this submittal, the subject property is surrounded on two sides by residential lots in the F-F(10), R-R(10), and R-R(5) zones. None of

these zones are resource zones. The subject property also has a residence located on the parcel immediately south of it; and even the large resource zoned tract abutting the southwest corner of the subject property is improved with a residence, although it is located some distance from the subject property. Thus, the subject parcel has residences surrounding it on all 4 sides, non-resource zoning designations on parcels abutting it on 3 sides, and intensive residential development on parcels abutting on 2 sides.

In general, all of the properties which adjoin Sevenmile Hill Road are committed to residential development and uses and are zoned accordingly. The subject parcel stands out as an anomaly in this pattern. Particularly in light of the fact that the subject property is already improved with a residence, the F-F(10) designation is far more consistent with the uses of adjacent lands than the F-2(80) designation. There is no evidence, historically or recently, that the subject property is or could be used for commercial timber production, and attempting to do so now would inevitably lead to conflicts with the immediately adjacent residential uses. Looking at the existing zoning map, it is clear that the large forestry designations are intentionally and more properly sited well away from the residential development which lies along a rural arterial road such as Sevenmile Hill.

**2.3.5 (d)** The other relevant factors set forth in OAR 660-004-0028(6).

**FINDING:** These factors are discussed in the following sections.

**2.3.6** OAR 660-004-0028(3) provides: “Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is ‘impossible.’ For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

- (a) Farm use as defined in ORS 215.203;
- (b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;
- (c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).”

In turn, ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other

agricultural or horticultural use or animal husbandry or any combination thereof. "Farm use" includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. "Farm use" also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. "Farm use" also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. "Farm use" includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. "Farm use" does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including "farm use" and "propagation or harvesting of a forest product," and OAR 660-006-0025(2)(a) states:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

**FINDING:** The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means "not capable of being carried out in practice." Webster's New World Dictionary, 2nd College Edition, 1980. Capable means "having ability" or "able to do things well." Id. Finally, "in practice" means by the usual method, custom or convention. Id. Webster's Third New International Dictionary, (unabridged ed., 1993) defines "impracticable" as "1a : not practicable : incapable of being performed or accomplished by the means employed or at command : INFEASIBLE \* \* \* c : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*"

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice on the subject parcel. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Using the area for commercial agricultural or forestry uses—in a manner capable of generating a profit or return from those activities—is not practicable on the subject parcel for all of the reasons stated in this submittal. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

A definition of "forest products" can be found in ORS 532.010(4), which states that forest products are "any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores."

The current level of residential development has increased to the point that commercial resource use has become impracticable. The subject property is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that compete with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The effects of these conflicts and impacts from residential uses combined with the long cycle for trees to reach maturity (100-125 years) make commercial forestry and commercial agriculture impracticable at this location. As explained throughout this submittal, residential development abutting and in close proximity to the subject property, coupled with the relatively small size of the subject property and local topography and climate, supports a conclusion that there is an inadequate buffer between the subject property and nearby rural residences. The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable.

To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the lack of suitability of the area for farm uses. The soils in the area are not generally suitable for farm use, nor is the climate conducive to those uses. At no time has the County considered the subject parcel to be farmland or to be suitable for farming, and at no time in the history of the area has farming taken place. Due to the existing parcelization, soils, climate and development in the area, it cannot be, and is not currently employed for the primary purpose of obtaining a profit from agricultural uses. The history of the area also supports this conclusion. At best, the area can support the small-scale, "peripheral" farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

- 2.3.7** OAR 660-004-0028(4) provides: "A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area."

**FINDING:** This submittal, including this statement and all attached exhibits, addresses all applicable factors and reasons why, in this case, the facts support the conclusion that uses allowed by Goals 3 and 4 are impracticable in the exception area. See especially, the immediately preceding sections of this submittal, and sections addressing section (6) of the rule, below.

- 2.3.8** OAR 660-004-0028(5) provides: "Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared

for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.”

**FINDING:** As discussed elsewhere in this submittal, the subject property includes a legal residence, other buildings, and associated physical development. The presence of the dwelling, and of the other dwellings immediately adjacent to the subject property, each contribute to the irrevocable commitment of the area to rural residential uses, and the impracticability of using the area for farm or forest uses.

**2.3.9** OAR 660-004-0028(6) provides: Findings of fact for a committed exception shall address the following factors:

**2.3.9.1 (a)** Existing adjacent uses;

**FINDING:** The existing adjacent uses are discussed and considered in great detail in the sections above. Existing adjacent uses to the West, North and East are all residential.

**2.3.9.2 (b)** Existing public facilities and services (water and sewer lines, etc.);

**FINDING:** There are no public water or sewer facilities on the subject property. An existing well provides water to the dwelling. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities.

**2.3.9.3 “(c)** Parcel size and ownership patterns of the exception area and adjacent lands:

(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”

**FINDING:** As discussed in great detail above and in the attached exhibits, the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the subject

property were not successful because of the cold and dry weather at this location and elevation. Virtually all of the existing lots have been developed and now have non-resource residences located on them. Only two parcels in the immediate area were created via exceptions to the goals: 7.35 acres located at 6955 Sevenmile Hill Road (Comprehensive Plan Amendment from F-2(40) to Rural Residential, CPA 89-104, October, 1989); and 9.87 acres located at the intersection of Sevenmile Hill Road and Sevenmile High Hill Road (Comprehensive Plan Amendment from FF-10 to Rural Residential, CPA 90-101, June 1990). Neither of these goal exception parcels are pivotal to the analysis of parcel size and ownership patterns in the immediate area. As noted, the local parcelization occurred long before the development of the goals, and the parcels created by that process have now been almost entirely developed.

(B) “Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land’s actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.”

**FINDING:** This provision is not applicable to this single parcel proposal; however, ownership patterns in the general area are discussed in detail in preceding sections of this narrative addressing OAR 660-004-0028(2)(a)-(c). The parcels are clustered along roads serving the area, as is the subject property, and virtually all parcels in the area are in separate ownerships. This parcelization pre-dates the adoption of the county zoning ordinance and comprehensive plan.

#### 2.3.9.4 “(d) Neighborhood and regional characteristics;”

**FINDING:** Based on the descriptions already provided in this submittal, the neighborhood and regional characteristics can best be described as non-resource, small acreage rural residential development clustered along Sevenmile Hill Road. Considering these characteristics, the current designation of the subject property as the only resource designated property touching Sevenmile Hill Road stands out as an anomaly. The exception will serve to make the subject property more conforming with existing neighborhood and regional characteristics.

2.3.9.5 “(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;”

**FINDING:** In general, the BPA Bonneville-The Dalles power line right-of-way/easement, which transects the local area south of the subject property, serves to separate the more residential areas

to the north from the commercial forest areas to the south. As noted, most of the residential development lies in the immediate area along Sevenmile Hill Road, with most of the commercial forest areas lying well to the south and being served by secondary or primitive roads.

**2.3.9.6** (f) “Physical development according to OAR 660-004-0025.” OAR 660-004-0025 sets forth the “Exception Requirements for Land Physically Developed to Other Uses” as follows:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.”

**FINDING:** Part of the justification for this exception is that the subject property is already physically developed with a dwelling, outbuildings, and associated access roads and other infrastructure. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is approximately 40 acres.

**2.3.9.7** “(g) Other relevant factors;”

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

**2.3.10** OAR 660-004-0028(7) provides: The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.

**FINDING:** The submittal complies with this requirement, and includes current maps as Exhibit 1 showing the subject property and adjoining lands.

**2.3.11** OAR 660-004-0040 concerns the:

“Application of Goal 14 Urbanization to Rural Residential Areas,” the purpose of which: “is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.”

Subsections -0040(1) through (3) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in OAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in OAR 660-004-0040.

**2.3.11.1** Although it is not entirely clear, OAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning to be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

**2.3.11.2** OAR 660-004-0040(4) and (5) provide:

“(4) The rural residential areas described in Subsection (2)(a) of this rule are rural lands. Division and development of such lands are subject to Statewide Planning Goal 14, Urbanization which prohibits urban use of rural lands.

(5)(a) A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres.

(b) A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone's minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.

(c) For purposes of this section, 'rural residential zone currently in effect' means a zone applied to a rural residential area, in effect on the effective date of this rule, and acknowledged to comply with the statewide planning goals."

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

**2.3.11.3 OAR 660-004-0040(6) and (7) provide:**

"(6) After October 4, 2000, a local government's requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division."

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

"(7)(a) The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule."

**FINDING:** The underlying zone will prevent the creation of any new lot or parcel in the subject property smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

(b) Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area. For purposes of this rule, that minimum area shall be referred to as the minimum lot size.

**FINDING:** The minimum lot size proposed is ten acres.

(c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.

**FINDING:** As stated, the minimum lot size of the underlying zone is currently ten acres, and that minimum lot size will apply on the subject property area.

(d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.

**FINDING:** As stated, the County's land use regulations do not specify a minimum lot size smaller than two acres.

(e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (7)(e)(A) through (7)(e)(H) are met:

\*\*\*\*\*

**FINDING:** The current proposal does not include a Planned Unit Development.

(f) Except as provided in subsection (e) of this section, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle."

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed rural residential area.

(g) In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(32) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule's requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.

**FINDING:** The current proposal does not include a mobile home park or manufactured dwelling park.

(h) A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:

(A) The parcel to be divided has two or more permanent habitable dwellings on it;

(B) The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;

(C) Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;

(D) The partition would not create any vacant parcels on which a new dwelling could be established.

(E) For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).

**FINDING:** Because the County is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

(i) For rural residential areas designated after the effective date of this rule, the affected county shall either:

(A) Require that any new lot or parcel have an area of at least ten acres, or

(B) Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'"

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one dwelling for every ten acres.

### **3. Justification for a Zone Change:**

#### **3.1 Zoning Ordinance - Chapter 9:**

Chapter 9 of the Wasco County Land Use and Development Ordinance (zoning ordinance), entitled "Zone Change and Ordinance Amendment," includes standards and procedures for zone changes. Section 9.010 states:

"Application for a zone change may be initiated as follows:

\*\*\*\*\*

C. By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the [Director of Planning]<sup>1</sup> to establish the criteria for the change (quasi-judicial only);"

---

<sup>1</sup> Missing text in published version of Section 9.010.

As indicated previously, this zone change was initiated by property owner David Wilson. Planning staff is presenting the proposal with a recommendation for approval.

### **3.2 Zoning Ordinance - Section 9.020**

Section 9.020, entitled “Criteria for Decision,” provides as follows:

“The Approving Authority may grant a zone change only if the following circumstances are found to exist:

- A. The original zoning was the product of a mistake; or
- B. It is established that
  1. The rezoning will conform with the Comprehensive Plan; and,
  2. The site is suitable to the proposed zone;
  3. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.”

**3.2.1** This request is for a plan amendment and an exception to Goal 4. The previous section of this discussion establishes that the current F-2(80) zoning can be considered a mistake given the location and characteristics of the subject property and its relationship to surrounding residential uses.

**3.2.2.** This narrative and the attached exhibits also establish that the requirements of subsection B. have been met: B(1) is met because the Comprehensive Plan is being amended specifically to support the proposed zoning designation; B(2) is met because the site is suitable to the proposed F-F(10) zone; and B(3) is met because through this zone change application and process there has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.

**3.2.3.** The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by section B(1):

#### Goal 1 - Citizen Involvement.

The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities in its Comprehensive Plan and the zoning ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable

plan and zoning ordinance provisions with opportunity for public input and by the public hearings required as part of this application and process.

#### Goal 2 – Land Use Planning.

The County's land use planning goal requires that procedures be established and followed to ensure public participation in land use decision making, and that there is an “adequate factual base” for land use decisions. All applicable procedures have or will be complied with in the consideration of this proposal. These findings and the record of this proceeding are a more than adequate factual base for the decision.

#### Goal 3 - Agricultural Lands.

Goal 3 provides for the preservation of Agricultural Lands for farm use. There are no Goal 3 designated Agricultural Lands on the subject property and Goal 3 therefore does not apply.

#### Goal 4 -- Forest Lands.

Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land, but is not now in timber production and has not historically been in timber production. As discussed in the preceding sections of this discussion, the subject property is not generally suitable for commercial forestry due to its development and use as residential property; its proximity to other residential properties; and its soil characteristics and historic uses. The proposal is to redesignate the property for rural residential uses, which will not have any impact on lands actually being used for commercial forestry.

#### Goal 5 - Open Spaces, Scenic and Historic Areas and Natural Resources.

The County zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the County. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

#### Goal 6 - Air, Land and Water Quality.

Goal 6 is “To maintain and improve the quality of the air, water and land resources of the state.” The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

#### Goal 7 -- Areas Subject to Natural Disasters and Hazards.

The subject property is not within any areas identified by the County as Natural Hazard Areas.

### Goal 8 -Recreational Needs.

Goal 8 is “To satisfy the recreational needs of the citizens of Wasco County and visitors.” None of the policies of Goal 8 apply to the proposal.

### Goal 9 -- Economy of the State.

Goal 9 is “To diversify and improve the economy of Wasco County.” The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

### Goal 10 -- Housing.

Goal 10 is “To provide for the housing needs of the citizens of Wasco County.” There is an ongoing need for developable rural residential lots, and corresponding pressure on resource lands to fill that need. The proposed zone change helps to ameliorate that pressure by creating potential rural residential lots while having no impact on lands actually in forest production.

### Goal 11 -- Public Facilities and Services.

Goal 11 is to “plan and develop a timely, orderly, and efficient arrangement of public facilities and services to provide a framework for urban and rural development.” The existing services and facilities in the area of the subject property are adequate for the proposal. The subject property adjoins Sevenmile Hill Road. Local fire and police services are provided by the rural fire protection district and the sheriff s office. Neither water nor sewer services are provided to the subject property, but are available on the subject property through individual well(s) and septic tank systems.

### Goal 12-Transportation.

Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The goal does not have approval standards, and is otherwise implemented through County transportation planning. The proposal will have little if any impact on the transportation system serving the subject property because there will be minimal increase in traffic generated by development that might occur as a result of the zone change. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. In connection with Goal 12, the County is required to apply the Transportation Planning Rule located in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires amendments to comprehensive plans that “significantly affect a transportation facility...assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” Sevenmile Hill/State Road

is classified as a Rural Major Collector, which is consistent with the level of traffic from the rural residential uses that feed into it.

### Goal 13 - Energy Conservation.

This Goal is met by application of development standards contained in the zoning ordinance.

### Goal 14-Urbanization.

The level of existing development and possible development does not constitute “urban use.” Goal 14 does not, therefore, apply. It should be noted, however, that Policy 3 of Goal 14 encourages “subdivisions to be developed by a planned development approach, maximizing physical design, the retention of open space and reducing adverse impacts. The proposed zone change for the subject property is consistent with that policy.

**3.2.5** Subsection B(2) of zoning ordinance section 9.020 requires that the site be shown to be “suitable to the proposed use.” The proposed zone would allow, outright, farm and forest uses and dwellings on parcels of at least ten acres in conjunction with farm or forest uses. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”

**3.2.5..1.** The Forest-Farm zone is not a resource zone. (See October 11, 1995 non-resource determination letter Exhibit WC-Q, Betzing Record). In this case, it is the most suitable designation for the subject property, which has been physically developed and entirely committed to nonresource use due to its location in close proximity to major county rural residential areas. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

**3.2.5..2.** The history of the area is also relevant to addressing this standard. As discussed in the Irrevocably Committed section of this discussion, the extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of the surrounding area to non-resource, rural residential uses. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and

increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable.

**3.2.6** Subsection B(3) of zoning ordinance section 9.020 requires, prior to approval of a zone change, that it be established that “There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.” The exhibits and record of this proceeding support a finding of compliance with this requirement. This requirement for rezoning has been met.

### **3.3 Zoning Ordinance – Section 9.030**

Section 9.030 requires review of the proposed action to determine whether it significantly affects a transportation facility. As discussed in Section 1.8, the proposed zone change will not significantly affect a transportation facility.

### **3.4 Zoning Ordinance – Section 9.040**

Section 9.040 allows for the imposition of such reasonable conditions “as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance.” The Section lists without limitation eight general categories of areas which may be conditioned to achieve the desired compatibility. Because the minimum lot size in the proposed zone change is 10 acres, because the uses surrounding the subject property are almost entirely rural residential, and because any future development will require compliance with applicable building and development standards, no conditions are necessary as part of this application to ensure the compatibility of the subject property to the surrounding uses.

### **3.5 Zoning Ordinance – Section 9.060 – 9.080**

Sections 9.060 through 9.080 require that the Planning Commission hold a hearing on the proposed zone change and make a recommendation to the County Board of Commissioners, which shall then take such action as it deems appropriate no sooner than twenty days after receipt of the Planning Commission’s recommendation.

## **CONCLUSION**

Because of the unique circumstances of the relationship between the subject property and surrounding land as explained above, the proposed residential uses will not commit adjacent or nearby resource land to nonresource use. The rural residential uses allowed are compatible with nearby resource use. Based upon all of the findings of fact and conclusions of law set forth above, the Planning Director recommends approval of the exception and zone change and recommends that the subject property be rezoned to F-F(10), and that the corresponding Plan, map and ordinance changes be made.

## SOIL INTERPRETATIONS RECORD

49C WAMIC LOAM 5 TO 12 PERCENT NORTH SLOPES

THE WAMIC SERIES CONSISTS OF DEEP WELL DRAINED SOILS FORMED IN AEOLIAN MATERIALS ON RIDGETOPS AND PLATEAUS. TYPICALLY, THE SURFACE LAYER IS VERY DARK GRAYISH BROWN LOAM ABOUT 7 INCHES THICK. THE SUBSOIL IS DARK BROWN LOAM ABOUT 21 INCHES THICK. THE SUBSTRATUM IS DARK BROWN LOAM ABOUT 16 INCHES THICK. DEPTH TO BEDROCK IS 40 TO 60 INCHES OR MORE. ELEVATION IS 1000 TO 3600 FEET. MEAN ANNUAL PRECIP. IS 14 TO 20 INCHES. MEAN ANNUAL AIR TEMP. IS 46 TO 50 DEGREES F. THE FROST-FREE PERIOD IS 100 TO 150 DAYS.

**TO:** WASCO COUNTY PLANNING COMMISSION

**FROM:** WASCO COUNTY PLANNING & ECONOMIC  
DEVELOPMENT OFFICE

**SUBJECT:** Request for Comprehensive Plan Amendment and Zone Change for a single 40  
acre parcel in the Sevenmile Hill Area Committed to Residential Use; Exception  
to Goal 4.

**HEARING DATE:**

**APPLICANT:** David Wilson

**NATURE OF REQUEST:**

The request is for:

- Amendment to the County's Comprehensive Plan and plan map establishing an exception to Goal 4, "Forest Lands," for Applicant's tax lot 4400 consisting of 40.10 acres; and
- A change in the zone designation of tax lot 4400 from F-2 (80) "Forest Use" to F-F (10) "Forest-Farm."

**RECOMMENDATION:** The Planning Office recommends that the Planning Commission approve the request for a zone change, comprehensive plan amendment, and exception as set forth below. The subject property is both physically developed and irrevocably committed to non-forest uses, because residential uses both on and surrounding the subject property make forest uses impracticable. The criteria for the requested zone and plan changes are met, as explained in this submittal and the attached Exhibits.

## BACKGROUND INFORMATION

### PROPERTY OWNERS:

This request is for tax lot 2N 12E 22 4400, owned by applicant David Wilson, as shown on the maps in Exhibit 1. Tax lot 4400 is a legally created lot of record, and is referred to in this submittal as the “subject property.”

### COMPREHENSIVE PLAN AND ZONING DESIGNATIONS:

The subject property is designated forest use on the comprehensive plan map and currently zoned F-2 (80) for forest use.

### PUBLIC FACILITIES AND SERVICES:

#### Transportation

The subject property lies south of Sevenmile Hill Road at the point where it intersects with Old Sevenmile Hill Road and Richard Road. At the point of the intersection of Sevenmile Hill Road and Dry Creek Road, and proceeding toward the northwest from the intersection, Sevenmile Hill Road becomes State Road. The primary access to the subject property is from Sevenmile Hill Road.

From the records of the Wasco County Road Department, State Road/Sevenmile Hill Road is a Functional Class RC Rural Major Collector with a 2009 ADT of 480 and a V/C Ratio of 0.01 [Data taken from Wasco County Transportation System Plan, 2009] The Planning Office prepared a memorandum to the County Court dated 2/18/98 as a staff report for the Transition Lands Study Area (TLSA) Rezoning Hearing. The TLSA memo listed a capacity for State Road/Sevenmile Hill Road of 1,500/day.

According to the latest version of the ITE Trip Generation Manual, a detached single family dwelling produces 9.57 Average Daily Trips (Land Use 210). The proposed zone change could potentially add 3 dwellings to the area's traffic load, producing 29 daily trips at maximum buildout. The addition of those trips to the existing ADT would result in 509 daily trips for the area. Based on the carrying capacity of State Road/Sevenmile Hill Road, the addition of 3 dwellings would not cause the V/C ratio to rise above 0.5. Wasco County has not established a mobility standard for Sevenmile Hill Road. However, in the 2009 Transportation System Plan the county used the ODOT mobility standard of 0.70 as a comparison figure. Using that standard, should the proposed zone change produce the maximum development allowed, it would not have a significant impact on the transportation facilities.

#### Water and Sewer

There is no public water system that would be available to serve existing or future residences on the subject property or surrounding lands, because of the rural nature of the area. A

Geologic Survey was published in 1996 as part of the TLISA study (see below under general history and prior land use actions) which included a survey of wells and groundwater levels to determine the capacity for development in the Sevenmile Hill area. The land around the subject property was found to have groundwater in relatively good quantities. The static water levels were found to be less than 50' and the depth to base of aquifer was found to be between 100' and 199.' (See Appendix 4 to the TLISA -- Ground Water Evaluation and Background Materials ("Groundwater Study") at pages 12-13.)

The predominant source of water in this area is from wells. There are two wells on the subject property (see Well Reports WASC 003131, WASC 003111, & WASC 003105). Yields are 50 & 60 GPM. There is also a well located on applicant's property to the south of the subject property yielding 35 GPM (see Well Report WASC 1609). The wells on the subject property have the capacity to support additional residential development, and the yields of all wells indicate adequate groundwater supply in the area. See additional findings below regarding the TLISA study.

There are no public sewer facilities available in the area. Each residence would be required to handle its own sewage as required by law. At the permitting stage, each residential development would have to go through the site evaluation process for an individual septic system and private well. A maximum overall density of 1 residence per 10 acres has provided the necessary land area for adequate handling of sewage for individual properties in areas surrounding the subject property.

#### Electricity

Power lines are located on Sevenmile Hill Road, in close proximity to the site. Electric power is available to serve the subject property and currently serves the residence and associated accessory buildings located on the subject property.

#### Fire Protection and Prevention

The subject property is within the Mid-Columbia Fire and Rescue District (Structural) and Oregon Department of Forestry (Wildfire). The District has cooperation agreements with the Oregon Department of Forestry and with the Mosier Fire Protection District. When an alarm is received in one agency, it is also transferred to the other two, and when necessary, there is a combined, coordinated response to fire emergencies.

### **GENERAL HISTORY AND PRIOR LAND USE ACTIONS:**

In 1993, Wasco County began work on the Transition Lands Study Area Project ("TLISA") in response to concerns about development in northern Wasco County, and particularly in the area surrounding the subject property, which area is known as the Sevenmile Hill area. The concerns included "availability of groundwater to serve domestic needs, fire hazard, conflict with wildlife, and available lands for rural residential lifestyle in this developing area."

The first phase of the project was a groundwater study. The initial study was published in December 1996 as the "TLSA Ground Water Evaluation, Wasco County, Oregon" by Jervey Geological Consulting (The Groundwater Study"). On September 12, 1997, the final report for the TLSA was published, incorporating the Groundwater Study. The TLSA report included recommendations outlining the sub-areas within the study area that were suitable for residential development, rating them with scores for resource values and development values. Referring to Figure 11 in that report, which is a map indicating the combined values of the two scales, the subject property was rated "L/H," meaning that it scored low for Resource Values and high for Development Values.

The final Recommendation of the TLSA for the Sevenmile Hill area included:

- Retain the existing R-R(5) and A-1 (80) EFU zoning
- Retain the existing R-R(5) and A-1 (80) EFU zoning .
- Retain the existing F-F(10) areas that have a higher resource value or a low development value (for instance, in areas where water availability is unknown).
- Rezone the remainder of the F-F(10) lands to R-R(10). F-F(10) areas would be able to transfer development rights to the area identified as the test area.

As a result of the TLSA study, eight parcels of F-F(10) land in the Sevenmile Hill area north of the subject property were converted to R-R(10), removing the requirement for conditional use review of proposed non-farm/forest dwellings (ZNC 99-101 ZO-L and CPA 99-103-CP-L). In recent years the County has approved single family dwellings that have subsequently been built on nearly every lot surrounding the subject property.

Additional detailed area history is contained in Section 2 of this submittal.

## **JUSTIFICATION FOR REQUEST:**

### **1. Wasco County Comprehensive Plan Revision Procedures and Standards.**

1.1. The Comprehensive Plan's "Definitions-Existing Land Use Map" identify the subject property as: "Forestry – this designation includes all commercial forest land, both publicly and privately owned. Productivity is greater than 20 cubic feet per acre per year." Page 232 of the plan lists "Purpose Definitions of Map Classifications on the Comprehensive Plan Map." The existing plan classification, "Forest," states: "Purpose: To provide for all commercial and multiple use forest activities compatible with sustained forest yield."

1.2. This request is to change the classification of the subject property on the planning map to "Forest-Farm:" "Purpose: To provide for the continuation of forest and farm

uses on soils which are predominantly class 7 and forest site class 6 and 7; and to preserve open space for forest uses (other than strictly commercial timber production) and for scenic value in the Gorge.”

**1.3.** The following provisions apply and are addressed in the following sections.

**1.4.** Chapter 11 of the Comprehensive Plan establishes procedures and standards for revision of the plan and plan map. This request requires amendment of the text of the plan, to justify an exception to Goal 4, and an amendment to the plan map to designate the subject property for Forest-Farm (non-resource) uses.

**1.5.** Chapter 11 states that a comprehensive plan revision may be initiated by the property owner or his authorized representative. This amendment has been initiated by property owner David Wilson.

**1.6.** The proposal is quasi-judicial in character, and hearings in this matter are being conducted with quasi-judicial procedures and safeguards. Notice of the hearing on this action was provided to the Department of Land Conservation and Development as specified in ORS 197.610 and 615. (See attached Exhibit \_\_\_\_\_)

**1.7. General Criteria for a Plan Amendment.**

Subsection H. of Chapter 11 of the comprehensive plan states:

“The following are general criteria which must be considered before approval of an amendment to the Comprehensive Plan is given:

1. Compliance with the statewide land use goals as provided by Chapter 15 or further amended by the Land Conservation and Development Commission, where applicable.
2. Substantial proof that such change shall not be detrimental to the spirit and intent of such goals.
3. A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.
4. Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions.
5. Proof of change in the inventories originally developed.

6. Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established.”

**1.7.1** As set forth by the County Court in Exhibit B of the Big Muddy Ranch – Young Life Youth and Family Camp Exception (September 1997), these are factors for consideration and not standards that must each be strictly met. Thus, the Planning Commission need only consider these criteria and determine whether they are generally satisfied.

**1.7.2** The following findings demonstrate compliance with statewide land use planning goals that may apply to the request, as required by subsections 1 and 2 of the plan amendment general factors:

Goal 1 - Citizen Involvement. The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities for citizen involvement in its Comprehensive Plan and zoning ordinance procedures. These proceedings are being conducted with notice and hearings with opportunity for public input as required by law and local ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable Plan and zoning ordinance provisions.

Goal 2 - Land Use Planning. The purpose of Goal 2 is “to establish a planning process and policy framework as a basis for all decisions and actions related to use of the land and to assure an adequate factual base for such decisions and actions.” The County's planning process has been acknowledged as being in compliance with the goals, and was followed in consideration of the proposal. An adequate factual base is provided by this narrative, the attached exhibits, and testimony received through the hearing process. As discussed in greater detail below, the proposal also complies with Goal 2 requirements for the adoption of exceptions to a statewide goal, in this case, Goal 4. The proposal complies with Goal 2.

Goal 3 – Agricultural Lands. Goal 3 provides for the preservation of Agricultural Lands for farm use. The subject property has been designated for forest uses, not farm uses, although small scale (non-commercial) farm uses are possible in the area. Because the subject property has not been identified or inventoried as agricultural land, Goal 3 does not apply to the proposal; however small-scale farming activities possible in the area are promoted by the allowance of the proposal.

Goal 4 - Forest Lands. Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land. The intention of this proposal is to accurately reflect the nature of the subject property by changing the zoning to F-F(10). Because Goal 4 applies, and the requested plan and zone designations would allow development of non-forest uses, an “exception” must be taken to Goal 4. The exception

is justified in part 2 of this narrative addressing LCDC's administrative rule requirements for “physically developed” and “irrevocably committed” exceptions.

Goal 5 -Open Spaces, Scenic and Historic Areas, and Natural Resources. Goal 5 is to protect natural resources and conserve scenic and historic areas and open spaces. The county zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the county. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

Goal 6 - Air, Water, and Land Resources Quality. Goal 6 is “To maintain and improve the quality of the air, water and land resources of the state.” The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

Goal 7 – Areas Subject to Natural Disasters and Hazards. Goal 7 is “To protect people and property from natural hazards.” Goal 7 calls for local governments to adopt measures “to reduce risk to people and property from natural hazards.” The subject property is not within any of the areas identified as being subject to natural disaster. The proposal complies with Goal 7.

Goal 8 – Recreational Needs. Goal 8 is “To satisfy the recreational needs of the citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts.” If the zoning is changed to F-F(10), “Parks, playgrounds, hunting and fishing preserves and campgrounds” would be allowed as conditional uses within the exception area. To the extent Goal 8 applies, the proposal is consistent with Goal 8.

Goal 9 – Economic Development. Goal 9 is “To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens.” The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

Goal 10 – Housing. Goal 10 is “To provide for the housing needs of citizens of the state.” The rule is directed to lands in urban and urbanizable areas. However, the proposal will allow development of additional homes in an area that is already built

and irrevocably committed to residential uses. Consistent with Goal 10, the proposal will improve housing opportunities in an area where such uses are appropriate.

Goal 11 - Public Facilities and Services. Goal 11 is “To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.” In this case, the proposed rural development is supported by facilities and services that are appropriate for, and limited to, the needs of the rural area to be served. Because the area is rural, public facilities such as water and sewer services are not considered necessary or appropriate. Public roads are available and adequate. Local fire and police services are provided by Mid-Columbia Fire and Rescue Department and the Wasco County Sheriff's Office. Neither water nor sewer services are provided to the area, but both are available on the subject property through individual well and septic tank systems. Electric and phone services are available in the area. The increased housing potential in the area is not great enough to have a significant impact on any facilities planned for under Goal 11. The density allowed by the change (1 residence per 10 acres) is less than the maximum density recommended by the TLSA study. The proposal complies with Goal 11.

Goal 12 - Transportation. Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The proposal will have little if any impact on the transportation system serving the subject property because there will be a minimal increase in traffic generated by development that might occur as a result of the plan amendment and zone change. Current estimates of use indicate that roads in the area are operating now well below their capacity, with Volume-to-Capacity ratios of 0.01. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads.

In connection with Goal 12, the County is required to apply the Transportation Planning Rule in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires, as to amendments to a comprehensive plan or zoning ordinance that “significantly affect a transportation facility,” that the County “assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” The proposed action does not significantly affect a transportation facility, and is in conformance with Goal 12 and the Goal 12 rule.

Goal 13 - Energy Conservation. Goal 13 is “To conserve energy.” Policy 3 directs the County to minimize energy consumption through the use of zoning and subdivision standards. In this case, Goal 13 is promoted by encouraging development near existing residential development and along established roads. The proposal conforms with and promotes Goal 13.

Goal 14 - Urbanization. Goal 14 is to “provide for an orderly and efficient transition from rural to urban land use.” Goal 14 lists seven factors to be considered when establishing and changing urban growth boundaries, and four considerations for converting urbanizable land to urban uses. The subject property is not near or within an urban growth boundary, and is not urban or urbanizable. The density of housing that could occur in the area following the requested plan amendment and zone change is one dwelling per ten acres, which is not an urban density. No decidedly “urban” services will be required to allow the maximum amount of development contemplated by this proposal. Water is available in the area in sufficient quantities to serve the proposed housing density (see Groundwater Evaluation). The proposed density will also allow sewage disposal through construction of on-site septic drainfields in accordance with DEQ and local health department requirements. To the extent Goal 14 applies to this proposal, conformance is demonstrated through detailed findings in this submittal addressing Goal 14 as required by Oregon Administrative Rules governing the exceptions process.

Goals 15 through 19 do not apply.

**1.7.3** As noted above, subsection 3 of the County's plan revision factors requires consideration of whether: “A mistake in the original comprehensive plan or change in the character of the neighborhood can be demonstrated.” As outlined in detail in the subsequent sections of this discussion, the subject property is the only parcel which touches Sevenmile Hill Road which is currently in resource zoning. The subject property is for all intents and purposes surrounded completely by residential development. It is not producing any marketable timber, and as outlined in the subsequent sections of this submittal, is unlikely to do so in the future. Comprehensive Plan Chapter 14 -- Findings and Recommendations outlines the anticipated uses for lands zoned F-2(80) as follows: “The ‘F-2 (40)’ and ‘F-2 (80)’ forest zones have very limited permitted uses and conditional uses that are generally compatible with primary timber management. Due to the high cost of these lands, the forty (40) and eighty (80) acre minimum lot sizes will be more than adequate to keep them in forest uses. Most of the lands zoned “F-2 (80)” is in either the Mt. Hood National Forest, White River Game Management Area or are private timber company holdings. These lands are adequately managed for forest, recreational and open space uses.”

Merriam-Webster's defines “mistake” as “to identify wrongly; confuse with another” or “a misunderstanding of the meaning or implication of something.” This proposal is being reviewed in a quasi-judicial proceeding, in which the County is considering whether proposed plan and zone designations for the subject property are more appropriate than the original designations. Based on the materials in this submittal, the County's original characterization of the area as most appropriate for commercial forest uses appears to have been incorrect. The area now appears not to be suitable for forestry uses, but to be more suitable for rural residential use. The TLSA study supports a conclusion that the original comprehensive plan was incorrect, and that the most

appropriate zoning of the property is F-F(10), allowing for rural residences. The County's rezoning of several parcels north of Sevenmile Hill Road from F-F(10) to RR-10, allowing development of nonfarm or forest dwellings as uses permitted outright, also supports this conclusion. The approval of dwellings on, around, and immediately adjacent to the subject property also supports a finding that the character of the neighborhood has changed, toward residential, and away from forestry use.

**1.7.4** As noted above, subsection 4 of the County's plan revision factors requires consideration of "Factors which relate to the public need for healthful, safe and aesthetic surroundings and conditions." This requirement is satisfied by the proposal, which is purposefully designed to allow limited residential development, and small-scale farm and forest uses, on land that is suited for such uses.

**1.7.5** As noted above, Subsection 5 of the County's plan revision factors requires consideration of "Proof of change in the inventories originally developed." The proof required by this section is provided by these findings, the attached exhibits, and testimony and evidence obtained by the County through the hearing process. The County's original inventory of forest lands included the subject property. That inventory has changed, because housing has been allowed on, and in close proximity to the subject property, in a manner that diminishes its suitability for forest uses. The most appropriate manner of addressing this change is as proposed-demonstrate that the land is built and committed to non-resource uses, and justify an exception to Goal 4 that will officially remove the property from the County's Goal 4 inventory. The property can then be dedicated to small scale farm and forest uses with limited density housing in a manner that is consistent with adjacent uses and which is compatible to those forest resource lands nearby.

**1.7.6** Subsection 6 of the County's plan revision factors states: "Revisions shall be based on special studies or other information which will serve as the factual basis to support the change. The public need and justification for the particular change must be established." As described throughout these findings, the proposed revisions are based on the TLSA study, previous County land use decisions affecting the area, as well as the information, justification and evidence contained and referenced in these findings and in the attached exhibits. These materials, and the County's plan, demonstrate that there is a public need for low-density rural residential uses and for small scale farm and forest uses in the county generally and in the Sevenmile Hill area. The justification for the particular change, addressed throughout these findings, is that the subject property is more properly designated for low density residential use than for commercial forestry uses. There is therefore a public need for the requested change, which has been fully justified by these findings and exhibits.

## **1.8 Transportation Planning Rule Compliance**

Subsection I. of Chapter 11 of the comprehensive plan states:

“1. Review of Applications for Effect on Transportation Facilities - A proposed plan amendment, whether initiated by the County or by a private interest, shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060 (the Transportation Planning Rule - “TPR”). 'Significant' means the proposal would:

a. Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);

b. Change standards implementing a functional classification system; or

c. As measured at the end of the planning period identified in the adopted transportation system plan:

1. Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;

2. Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP; or

3. Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

2. Amendments That Affect Transportation Facilities - Amendments to the land use regulations that significantly affect a transportation facility shall ensure that allowed land uses are consistent with the function, capacity, and level of service of the facility identified in the TSP. This shall be accomplished by one or a combination of the following:

a. Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.

b. Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of Section -0060 of the TPR.

c. Altering land use designations, densities, or design requirements to reduce demand for vehicle travel and meet travel needs through other modes of transportation.

d. Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.

3. Traffic Impact Analysis - A Traffic Impact Analysis shall be submitted with a plan amendment application pursuant to Section 4.140 Traffic Impact Analysis (TIA)) of the Land Use and Development Ordinance.”

**1.8.1** A separate Traffic Impact Analysis is not required for this proposal because there is not a “significant impact” under the TPR (OAR 660-12-0060(1)).

## **1.9 Procedures for a Plan Amendment.**

Subsection J. of Chapter 11 of the Comprehensive Plan states, in relevant part:

1. A petition must be filed with the Planning Offices on forms prescribed by the Commission.
2. Notice of a proposed revision within, or to, the urban growth boundary will be given to the appropriate city at least thirty (30) days before the County public hearing.
3. Notification of Hearing:
  - 1) Notices of public hearings shall summarize the issues in an understandable and meaningful manner.
  - 2) Notice of hearing of a legislative or judicial public hearing shall be given as prescribed in ORS 215.503 subject to ORS 215.508. In any event, notice shall be given by publishing notice in newspapers of general circulation at least twenty (20) days, but not more than forty (40) days, prior to the date of the hearing.
  - 3) A quorum of the Planning Commission must be present before a public hearing can be held. If the majority of the County Planning Commission cannot agree on a proposed change, the Commission will hold another public hearing in an attempt to resolve the difference or send the proposed change to the County Governing Body with no recommendation.
  - 4) After the public hearing, the Planning Commission shall recommend to the County Governing Body that the revision be granted or denied, and the facts and reasons supporting their decision. In all cases the Planning Commission shall enter findings based on the record before it to justify the decision. If the Planning Commission sends the proposed change with no recommendation, the findings shall reflect those items agreed upon and those items not agreed upon that resulted in no recommendation.
  - 5) Upon receiving the Planning Commission's recommendation, the County Governing Body shall take such action as they deem appropriate. The County Governing Body may or may not hold a public hearing. In no event shall the County Governing Body approve the amendment until at least twenty (20) days have passed since the mailing of the recommendation to parties."

These procedures and all other applicable statutory and local procedures have been or will be followed in consideration of the proposal.

## 2. Justification for Taking an Exception to Goal 4:

### 2.1 Introduction.

In order to amend its plan to change the subject property's designation from Forestry to Forest-Farm, and to implement that designation through its zoning ordinance, the County must adopt an exception to Goal 4.

Statewide Land Use Planning Goal 4, "Forest Lands" is:

"To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture."

ORS 197 .932(1) states, in relevant part:

"(1) A local government may adopt an exception to a goal if:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal; [or]

(b) The land subject to the exception is irrevocably committed as described by Land Conservation and Development Commission rule to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;

\* \* \*

(4) A local government approving or denying a proposed exception shall set forth findings of fact and a statement of reasons which demonstrate that the standards of subsection (1) of this section have or have not been met.

(5) Each notice of a public hearing on a proposed exception shall specifically note that a goal exception is proposed and shall summarize the issues in an understandable manner.

\* \* \*

(8) As used in this section, 'exception' means a comprehensive plan provision, including an amendment to an acknowledged comprehensive plan, that:

(a) Is applicable to specific properties or situations and does not establish a planning or zoning policy of general applicability;

(b) Does not comply with some or all goal requirements applicable to the subject properties or situations; and

(c) Complies with standards under subsection (1) of this section.”

**2.1.1** In like manner, Planning Goal 2, part II, states, in relevant part:

“A local government may adopt an exception to a goal when:

(a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable Goal; [or]

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable;”

**2.1.2** Both the goal and the rule adopt the legislative definition of an exception with minor variation-subsection (c) is modified in the goal to state “Complies with standards for an exception” and in the rule to state “Complies with the provisions of this Division.” OAR 660-004-0010 states that the “process is generally applicable to all or part of those statewide goals which prescribe or restrict certain uses of resource land,” including: “Goal 4 'Forest Lands.’”

**2.1.3** Goal 4 provides that:

“Where a \* \* \* plan amendment involving forest lands is proposed, forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water and fish and wildlife resources.”

**2.1.4** Rule definitions of “resource land” and “non-resource land” support a conclusion that, in this instance, an exception is necessary before the subject property can be plan and zone designated for forest-farm uses, a rural residential, non-resource category of uses under the County's plan and zoning ordinance. To justify an exception, the County must address all applicable criteria in LCDC's rule for exceptions, OAR 660, Division 4.2.2.

This request is for both “physically developed” and “irrevocably committed” exceptions to Goal 4, “Forest Lands,” which seeks to conserve forest lands by promoting efficient forest practices and sound management of the state's forest land base.

## 2.2 Exception Requirements for Land Physically Developed to Other Uses.

OAR 660-004-0025 contains standards for adoption of a “physically developed” exception.

OAR 660-004-0025 states:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)
- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.

**FINDING:** The proposed exception area consists of a 40.10 acre piece identified as tax lot 4400 located in T2N, R12E, and in the southwestern quarter of Section 22 (the subject property). The north line of the subject property abuts Sevenmile Hill Road, and the northwest corner of the subject property is at the intersection of Sevenmile Hill Road and Old Sevenmile Hill Road. The subject property is rectangle measuring roughly 1,600 feet east/west and 1,500 feet north/south. It is generally sloping downward to the north, with the northern boundary along Sevenmile Hill Road as the low point.

The subject property is improved with a log home with surrounding decks covering approximately 2,680 ft<sup>2</sup> and a 720 ft<sup>2</sup> basement located approximately halfway between the north and south boundaries and in the western one third of the property. A driveway serving the residence and properties to the south extends from the northwest corner of the subject property southward, generally paralleling the western boundary. There are two barns with stalls located generally east of the log home, each covering approximately 1,110 ft<sup>2</sup> for total coverage of 2,220 ft<sup>2</sup>.

Further east of the hay loft and barn there is an original home site with cabin covering 1,980 ft<sup>2</sup> located generally east of the log home. There is an old barn located south of the cabin covering 1,200 ft<sup>2</sup>.

The log home was built pursuant to a conditional use permit, the conditions of which required decommissioning the original cabin as a residential structure; however, the cabin legally exists and may be used for other uses consistent with the existing zoning.

A good portion of the southeastern portion of the subject property consists of a cleared area growing grass hay which previously served as a pasture for the cabin and now is baled each year. Most of the northern two thirds of the subject property has been cleared at some point in the past and remains clear at this time. There is no merchantable timber on the property, and the property has never supported merchantable timber. There are scrub oaks and pine trees growing on the southern portion and eastern boundary of the property. There are no fir trees of any size larger than a seedling on the property, and historically firs do not survive. Grasses and shrubs create moderately dense underbrush.

Soils on the subject property are Class 4, predominately 49C and 50D Wamic Loam, 5-12% slope. This soil type represents more gently sloping areas where the exposure is toward the north. On the subject property, this particular range of the soil class is characterized by smaller oak and scattered pine forest. These soils are suitable for dry farm small grain, grass hay, and pasture. The woodland site index designation of 70 for Ponderosa Pine indicates low productivity with no significant limitations or restrictions. This capability class is also designated under the pine-oak-fescue range and as such it is possible that it could be used for fruit orchards or other crops. In its uncultivated state, however, special management is required to reduce oak and shrub growth that will curtail stabilizing plant growth beneath what amounts to a thin, mainly pine canopy.

The area has no history of crop use with the exception of grass hay grown the pasture area. Due to the terrain and rocky soil, and because the elevation creates climatic extremes, crop agriculture is uneconomical and otherwise impracticable.

The subject property does not have a history of commercially successful grazing for sheep or cattle. Grazing was occasionally tried in the area in the 1940's, but the terrain, thin soil and climate have limited the activities to an occasional attempt rather than a sustained commercial success. There are no properties in the immediate area being used for commercial grazing.

Although the soils on the subject property could, at first glance, appear to indicate a potential for agricultural use, particularly small-scale orchards, that potential is severely reduced due to climatic conditions. The subject property is in current use for a residence, along with pasture and wildlife habitat in the scrub oak section. It has never been successfully utilized for agricultural purposes and has very limited value as forestland due to the dwellings on the site. The soils indicate low timber productivity. There are no productive orchards or other commercial agricultural uses in the area immediately surrounding the subject property.

The residential development surrounding the subject property has occurred mainly in proximity to Sevenmile Hill Road that runs along the northern boundary of the subject property. Because of this development and ownership pattern, and because of the small average and odd shaped lot

sizes, it would be impracticable to manage any of the property in the area as a commercial forestry operation or as part of such an operation.

## **2.3 Exception Requirements for Land Irrevocably Committed to Other Uses.**

OAR 660-004-0028 contains standards for adoption of an “irrevocably committed” exception.

### **2.3.1 OAR 660-004-0028(1) provides:**

- (1) “A local government may adopt an exception to a goal when the land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable:
  - (a) A ‘committed exception’ is an exception taken in accordance with ORS 197.732(1)(b), Goal 2, Part II(b), and with the provisions of this rule;
  - (b) For the purposes of this rule, an ‘exception area’ is that area for which a ‘committed exception’ is taken;
  - (c) An ‘applicable goal,’ as used in this section, is a statewide planning goal or goal requirement that would apply to the exception area if an exception were not taken.

**FINDING:** The subject property contains a legal residence, and is surrounded on 2 sides by small residential tracts, and by a residence to the south. The subject property is irrevocably committed to non-resource use. All of the large forested tracts currently producing merchantable timber are located well south of the subject property, and adopting this exception for the subject property will not negatively impact those uses.

### **2.3.2 OAR 660-004-0028(2) provides: “Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:**

- (a) The characteristics of the exception area;”

**FINDING:** The characteristics of the subject property are fully discussed in the findings above in response to OAR 660-004-0025 (Physically Developed).

### **2.3.3 (b) “the characteristics of the adjacent lands;”**

### **FINDING:**

In general, the areas to the East and North of the subject property have been for the most part divided into smaller lots relative to rural development (10 acres or less). A large majority of the

parcels were created long before the area was subject to statewide or even county-wide zoning regulation. Of the three subdivisions in the immediate area of the subject parcel, two were platted in the early part of the 20th century, and the third in 1979 (Fairmont Orchard Tracts-1911; Sunnydale Orchards-1912; Flyby Night Subdivision-1979). The majority of the lots in these subdivisions are approximately 5 acres in size. The County has recognized the existing parcelization by zoning the area for rural residential development (R-R(5) and R-R(10)) and for small-scale agriculture or forestry uses in conjunction with a rural residence (F-F(10)). As a result of this parcelization and in keeping with the zoning, there has been a significant amount of rural residential development, particularly along the county roads and within the platted subdivisions. There have also been several applications for rural residences in the areas zoned F-F(10).

Specific adjacent lands analysis is as follows:

**East:** Directly to the east of and abutting the subject parcel are two parcels zoned F-F(10): T2N R12E, Section 22, Lots 4300 and 4200. Both of these lots have residences.

Properties further east along Wits End Drive and Sevenmile High South Road are zoned R-R(10) and all have residences (tax lots 3600, 3400, 3800, 3900, 4000). These properties average approximately 5 acres in size and are part of the Fairmont Orchard Tracts subdivision which was platted in 1911.

**North:** To the north of the subject property across Sevenmile Hill Road is a lot zoned R-R(5), Tax Lot 4600 (7.35 ac.), and a small lot owned by Wasco County (Tax Lot 4500, .7 acres). 4600 has a residence. Tax Lot 4700 meets the subject property on its northeast corner, is zoned F-F(10), and has a residence.

Properties north of the subject property lying along Richard Road are small acreages zoned R-R(5), all with residences.

All of the area north of the subject property is built and committed to low and medium density rural residential uses. There are two platted subdivisions: Sunnydale Orchards, platted in 1912, and Flyby Night, platted 1979.

The Sunnydale Orchards Subdivision was recorded on March 8, 1912. It consisted of 25 lots averaging about five acres each, with the largest at 11.4 acres. Lots in the subdivision are for the most part less than ten acres each. The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

The plat for the Flyby Night Subdivision was recorded November 8, 1979. The Flyby Night lots average approximately five acres each, with two larger, approximately 20-acre parcels as the exceptions. The zoning for the Flyby Night subdivision is R-R(5).

The areas to the north and east are the most heavily developed areas surrounding the subject property. As can be seen by the maps in Exhibits 1, virtually all lots to the north and east of the subject property have been improved with a residence or a manufactured home.

The County has recognized that development has increased in this area over the years, and rezoned several lots in the southern part of Sunnydale Orchards from F-F(10) to R-R(10) (Pursuant to Ordinance 99-111).

**West:** Tax lot 2N 10E 21 900, which abuts the west property line of the subject parcel, is split zoned, with the northern portion which abuts Sevenmile Hill Road zoned F-F(10) and the southern portion zoned F-2(80). The southern portion has not been commercially logged, and is slowly being cleared. Tax Lot 2900, a 439 acre parcel, abuts the southwest portion and corner of the subject property and is zoned F-2(80). It has a residence located on the western portion along Osburn Cutoff Road. This property has a creek running generally north-south which forms a clear line of demarcation between the more vibrant, productive land to the west and the scrubrier soils to the east. The land west of the creek supports the growth of Douglas Fir trees; the land to the east is predominantly scrub oak and pine similar to the subject property. The commercial logging on this piece has been confined to the area west of the creek.

In general, the parcels to the west of the subject property lying both north and south of and abutting Sevenmile Hill Road consist of small acreages zoned F-F(10), almost all improved with residences.

The subject property is the only parcel which touches Sevenmile Hill Road which is zoned F-2(80). The only other parcels similarly zoned which touch any road are large, unimproved parcels located well west of the subject property which lie south of and touch Dry Creek Road or which lie along Osburn Cutoff Road.

**South:** Tax lot 2N 10E 22 4100 abutting the subject property to the south is zoned F-2(80). It is owned by the owner of the subject property, and has a legal residence, and together with tax lot 2800 to the south, also in common ownership, comprises approximately 70 acres. It is not used for timber production. This parcel is transected by the BPA Bonneville-The Dalles power line right-of-way/easement, which forms a natural boundary between this parcel and the larger, commercially forested tracts to the south.

**Soils:** The subject property soils are 49C and 50D Wamic Loam. The parcels immediately north of the subject property are generally 51D Wamic Loam soils. Adjacent properties to the south and east are 49C and 50D, like the subject property. (See soils maps and productivity indices) 49C and 50D soils both have a site index of 70 for Ponderosa Pine, indicating a potential yield of 20-49 cubic feet per acre. However, with the exception of the 439 acre parcel adjoining the southwest corner of the subject property, none of the adjacent properties are supporting commercial timber production, and logging on the 439 acre parcel takes place west of the creek which runs parallel to the common boundary. All commercial timber production occurs well south of the subject property, generally south of the BPA power line transecting the

area. The subject property has never produced merchantable timber or been logged commercially.

**2.3.4 (c)** The relationship between the exception area and the lands adjacent to it;

**FINDING:** As described in the preceding sections of this submittal, the subject property is surrounded on two sides by residential lots in the F-F(10), R-R(10), and R-R(5) zones. None of these zones are resource zones. The subject property also has a residence located on the parcel immediately south of it; and even the large resource zoned tract abutting the southwest corner of the subject property is improved with a residence, although it is located some distance from the subject property. Thus, the subject parcel has residences surrounding it on all 4 sides, non-resource zoning designations on parcels abutting it on 3 sides, and intensive residential development on parcels abutting on 2 sides.

In general, all of the properties which adjoin Sevenmile Hill Road are committed to residential development and uses and are zoned accordingly. The subject parcel stands out as an anomaly in this pattern. Particularly in light of the fact that the subject property is already improved with a residence, the F-F(10) designation is far more consistent with the uses of adjacent lands than the F-2(80) designation. There is no evidence, historically or recently, that the subject property is or could be used for commercial timber production, and attempting to do so now would inevitably lead to conflicts with the immediately adjacent residential uses. Looking at the existing zoning map, it is clear that the large forestry designations are intentionally and more properly sited well away from the residential development which lies along a rural arterial road such as Sevenmile Hill.

**2.3.5 (d)** The other relevant factors set forth in OAR 660-004-0028(6).

**FINDING:** These factors are discussed in the following sections.

**2.3.6** OAR 660-004-0028(3) provides: “Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is ‘impossible.’ For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;

(a) Farm use as defined in ORS 215.203;

(b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;

(c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).”

In turn, ORS 215.203(2)(a) states:

“[F]arm use” means the current employment of land for the primary purpose of obtaining a profit in money by raising, harvesting and selling crops or the feeding, breeding, management and sale of, or the produce of, livestock, poultry, fur-bearing animals or honeybees or for dairying and the sale of dairy products or any other agricultural or horticultural use or animal husbandry or any combination thereof. “Farm use” includes the preparation, storage and disposal by marketing or otherwise of the products or by-products raised on such land for human or animal use. “Farm use” also includes the current employment of land for the primary purpose of obtaining a profit in money by stabling or training equines including but not limited to providing riding lessons, training clinics and schooling shows. “Farm use” also includes the propagation, cultivation, maintenance and harvesting of aquatic, bird and animal species that are under the jurisdiction of the State Fish and Wildlife Commission, to the extent allowed by the rules adopted by the commission. “Farm use” includes the on-site construction and maintenance of equipment and facilities used for the activities described in this subsection. “Farm use” does not include the use of land subject to the provisions of ORS chapter 321, except land used exclusively for growing cultured Christmas trees as defined in subsection (3) of this section or land described in ORS 321.267 (3) or 321.824 (3).)

OAR 660-033-0120 contains a chart of uses that are allowed outright, conditionally, or not authorized on agricultural lands, including “farm use” and “propagation or harvesting of a forest product,” and OAR 660-006-0025(2)(a) states:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals, and disposal of slash;

**FINDING:** The rule does not require that the listed resource uses be impossible in the exception area; rather, it requires that they be impracticable. Impracticable means “not capable of being carried out in practice.” Webster’s New World Dictionary, 2nd College Edition, 1980. Capable means “having ability” or “able to do things well.” Id. Finally, “in practice” means by the usual method, custom or convention. Id. Webster’s Third New International Dictionary, (unabridged ed., 1993) defines “impracticable” as “**1a** : not practicable : incapable of being performed or accomplished by the means employed or at command : INFEASIBLE \* \* \* **c** : IMPRACTICAL, UNWISE, IMPRUDENT \* \* \*”

Based on the foregoing, the County must evaluate to what extent the adjacent uses and other factors affect the ability of property owners to carry out resource uses in practice on the subject

parcel. The rule only requires evaluating whether the resource use can be carried out by the usual, available methods or customs. Consequently, just because a farm or forest use can be attained by methods that are not usual or customary does not mean that the farm or forest use is practicable. Using the area for commercial agricultural or forestry uses—in a manner capable of generating a profit or return from those activities—is not practicable on the subject parcel for all of the reasons stated in this submittal. Resource designation is not necessary to preserve the area for small scale farm or forestry uses in conjunction with residential use.

A definition of “forest products” can be found in ORS 532.010(4), which states that forest products are “any form, including but not limited to logs, poles and piles, into which a fallen tree may be cut before it undergoes manufacturing, but not including peeler cores.”

The current level of residential development has increased to the point that commercial resource use has become impracticable. The subject property is surrounded on three sides by existing residential development, with the potential for additional residential development in the future. Conflicts caused by the proximity of residential neighbors on three sides require added expense related to fire protection, fencing and general control of the area, and prevent the use of spraying to control insects and vegetation that compete with commercial tree species. Further conflicts with residences arise because of the noise associated with commercial operations and the safety risks of logging near residential property.

The effects of these conflicts and impacts from residential uses combined with the long cycle for trees to reach maturity (100-125 years) make commercial forestry and commercial agriculture impracticable at this location. As explained throughout this submittal, residential development abutting and in close proximity to the subject property, coupled with the relatively small size of the subject property and local topography and climate, supports a conclusion that there is an inadequate buffer between the subject property and nearby rural residences. The steps that would need to be taken to efficiently and effectively manage timber in the area makes such uses impracticable.

To the extent this section requires that a justification for an exception to Goal 4 also requires consideration of the suitability of the area for farm uses, the record of this proceeding and the attached exhibits demonstrate the lack of suitability of the area for farm uses. The soils in the area are not generally suitable for farm use, nor is the climate conducive to those uses. At no time has the County considered the subject parcel to be farmland or to be suitable for farming, and at no time in the history of the area has farming taken place. Due to the existing parcelization, soils, climate and development in the area, it cannot be, and is not currently employed for the primary purpose of obtaining a profit from agricultural uses. The history of the area also supports this conclusion. At best, the area can support the small-scale, “peripheral” farm activities now taking place on adjacent F-F and R-R zoned properties, under circumstances in which residential use represents the primary and most highly valued use.

- 2.3.7** OAR 660-004-0028(4) provides: “A conclusion that an exception area is irrevocably committed shall be supported by findings of fact which address all applicable factors of section (6) of this rule and by a statement of reasons

explaining why the facts support the conclusion that uses allowed by the applicable goal are impracticable in the exception area.”

**FINDING:** This submittal, including this statement and all attached exhibits, addresses all applicable factors and reasons why, in this case, the facts support the conclusion that uses allowed by Goals 3 and 4 are impracticable in the exception area. See especially, the immediately preceding sections of this submittal, and sections addressing section (6) of the rule, below.

**2.3.8** OAR 660-004-0028(5) provides: “Findings of fact and a statement of reasons that land subject to an exception is irrevocably committed need not be prepared for each individual parcel in the exception area. Lands which are found to be irrevocably committed under this rule may include physically developed lands.”

**FINDING:** As discussed elsewhere in this submittal, the subject property includes a legal residence, other buildings, and associated physical development. The presence of the dwelling, and of the other dwellings immediately adjacent to the subject property, each contribute to the irrevocable commitment of the area to rural residential uses, and the impracticability of using the area for farm or forest uses.

**2.3.9** OAR 660-004-0028(6) provides: Findings of fact for a committed exception shall address the following factors:

**2.3.9.1** (a) Existing adjacent uses;

**FINDING:** The existing adjacent uses are discussed and considered in great detail in the sections above. Existing adjacent uses to the West, North and East are all residential.

**2.3.9.2** (b) Existing public facilities and services (water and sewer lines, etc.);

**FINDING:** There are no public water or sewer facilities on the subject property. An existing well provides water to the dwelling. Electric power and phone service are available to the area. The property can be adequately served by existing fire, police and school facilities.

**2.3.9.3** “(c) Parcel size and ownership patterns of the exception area and adjacent lands:

(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be

irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”

**FINDING:** As discussed in great detail above and in the attached exhibits, the existing development pattern for the Sevenmile Hill area was established prior to the adoption of the goals. Many of the small parcels that characterize the area were created between 1900 and 1920 and were marketed as orchard sites that could support a family. The lots in the vicinity of the subject property were not successful because of the cold and dry weather at this location and elevation. Virtually all of the existing lots have been developed and now have non-resource residences located on them. Only two parcels in the immediate area were created via exceptions to the goals: 7.35 acres located at 6955 Sevenmile Hill Road (Comprehensive Plan Amendment from F-2(40) to Rural Residential, CPA 89-104, October, 1989); and 9.87 acres located at the intersection of Sevenmile Hill Road and Sevenmile High Hill Road (Comprehensive Plan Amendment from FF-10 to Rural Residential, CPA 90-101, June 1990). Neither of these goal exception parcels are pivotal to the analysis of parcel size and ownership patterns in the immediate area. As noted, the local parcelization occurred long before the development of the goals, and the parcels created by that process have now been almost entirely developed.

(B) “Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land’s actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.”

**FINDING:** This provision is not applicable to this single parcel proposal; however, ownership patterns in the general area are discussed in detail in preceding sections of this narrative addressing OAR 660-004-0028(2)(a)-(c). The parcels are clustered along roads serving the area, as is the subject property, and virtually all parcels in the area are in separate ownerships. This parcelization pre-dates the adoption of the county zoning ordinance and comprehensive plan.

#### 2.3.9.4 “(d) Neighborhood and regional characteristics;”

**FINDING:** Based on the descriptions already provided in this submittal, the neighborhood and regional characteristics can best be described as non-resource, small acreage rural residential development clustered along Sevenmile Hill Road. Considering these characteristics, the current

designation of the subject property as the only resource designated property touching Sevenmile Hill Road stands out as an anomaly. The exception will serve to make the subject property more conforming with existing neighborhood and regional characteristics.

2.3.9.5 “(e) Natural or man-made features or other impediments separating the exception area from resource land. Such features or impediments include but are not limited to roads, watercourses, utility lines, easements, or rights-of-way that effectively impede practicable resource use of all or part of the exception area;”

**FINDING:** In general, the BPA Bonneville-The Dalles power line right-of-way/easement, which transects the local area south of the subject property, serves to separate the more residential areas to the north from the commercial forest areas to the south. As noted, most of the residential development lies in the immediate area along Sevenmile Hill Road, with most of the commercial forest areas lying well to the south and being served by secondary or primitive roads.

2.3.9.6 (f) “Physical development according to OAR 660-004-0025.” OAR 660-004-0025 sets forth the “Exception Requirements for Land Physically Developed to Other Uses” as follows:

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal.
- (2) Whether land has been physically developed with uses not allowed by an applicable Goal, will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception. The specific area(s) must be shown on a map or otherwise described and keyed to the appropriate findings of fact. The findings of fact shall identify the extent and location of the existing physical development on the land and can include information on structures, roads, sewer and water facilities, and utility facilities. Uses allowed by the applicable goal(s) to which an exception is being taken shall not be used to justify a physically developed exception.”

**FINDING:** Part of the justification for this exception is that the subject property is already physically developed with a dwelling, outbuildings, and associated access roads and other infrastructure. The minimum lot size for a forest dwelling is currently 240 acres, and the subject property is approximately 40 acres.

2.3.9.7 “(g) Other relevant factors;”

To the extent there are other relevant factors, they are discussed throughout this submittal and not repeated here.

**2.3.10** OAR 660-004-0028(7) provides: The evidence submitted to support any committed exception shall, at a minimum, include a current map, or aerial photograph which shows the exception area and adjoining lands, and any other means needed to convey information about the factors set forth in this rule. For example, a local government may use tables, charts, summaries, or narratives to supplement the maps or photos. The applicable factors set forth in section (6) of this rule shall be shown on the map or aerial photograph.

**FINDING:** The submittal complies with this requirement, and includes current maps as Exhibit 1 showing the subject property and adjoining lands.

**2.3.11** OAR 660-004-0040 concerns the:

“Application of Goal 14 Urbanization to Rural Residential Areas,” the purpose of which: “is to specify how Statewide Planning Goal 14, Urbanization, applies to rural lands in acknowledged exception areas planned for residential uses.”

Subsections -0040(1) through (3) explain what the rule does. It does not apply to land within an urban growth boundary; unincorporated community; urban reserve area; destination resort; resource land; and “nonresource land, as defined in OAR 660-004-0005(3).” The following sections of this submittal demonstrate compliance with Goal 14 as and to the extent specified in OAR 660-004-0040.

**2.3.11.1** Although it is not entirely clear, OAR 660-004-0040 does not appear to include standards that apply to the land use decisions requested by this submittal. The land in question is currently classified as resource land, and the request is to establish an exception to Goal 4 that will allow rural residential development on lots that are a minimum of ten acres per dwelling, or otherwise at a density that cannot exceed one dwelling for every ten acres in the area. The F-F(10) zoning to be applied will ensure that the requested housing density is not exceeded. The proposed housing density is not an urban density. No sewer or water services exist near the area or are proposed, and there are no other “urban” attributes of development that could occur if the request is granted.

**2.3.11.2** OAR 660-004-0040(4) and (5) provide:

“(4) The rural residential areas described in Subsection (2)(a) of this rule are rural lands. Division and development of such lands are subject to Statewide Planning Goal 14, Urbanization which prohibits urban use of rural lands.

(5)(a) A rural residential zone currently in effect shall be deemed to comply with Goal 14 if that zone requires any new lot or parcel to have an area of at least two acres.

(b) A rural residential zone does not comply with Goal 14 if that zone allows the creation of any new lots or parcels smaller than two acres. For such a zone, a local government must either amend the zone's minimum lot and parcel size provisions to require a minimum of at least two acres or take an exception to Goal 14. Until a local government amends its land use regulations to comply with this subsection, any new lot or parcel created in such a zone must have an area of at least two acres.

(c) For purposes of this section, 'rural residential zone currently in effect' means a zone applied to a rural residential area, in effect on the effective date of this rule, and acknowledged to comply with the statewide planning goals."

**FINDING:** This section does not appear to be an approval standard applicable to the request. However, the proposed zone will not allow the creation of any new lots or parcels within the exception area smaller than two acres, in conformance with this section.

**2.3.11.3** OAR 660-004-0040(6) and (7) provide:

"(6) After October 4, 2000, a local government's requirements for minimum lot or parcel sizes in rural residential areas shall not be amended to allow a smaller minimum for any individual lot or parcel without taking an exception to Goal 14 pursuant to OAR chapter 660, division 14, and applicable requirements of this division."

**FINDING:** The County recognizes the requirements of this section. No request has been made to allow smaller minimum lot sizes than allowed by the rule.

"(7)(a) The creation of any new lot or parcel smaller than two acres in a rural residential area shall be considered an urban use. Such a lot or parcel may be created only if an exception to Goal 14 is taken. This subsection shall not be construed to imply that creation of new lots or parcels two acres or larger always complies with Goal 14. The question of whether the creation of such lots or parcels complies with Goal 14 depends upon compliance with all provisions of this rule."

**FINDING:** The underlying zone will prevent the creation of any new lot or parcel in the subject property smaller than two acres. Lot sizes allowed in the area comply with all provisions of the Goal 2 rule for exceptions.

(b) Each local government must specify a minimum area for any new lot or parcel that is to be created in a rural residential area. For purposes of this rule, that minimum area shall be referred to as the minimum lot size.

**FINDING:** The minimum lot size proposed is ten acres.

(c) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size of two acres or more, the area of any new lot or parcel shall equal or exceed that minimum lot size which is already in effect.

**FINDING:** As stated, the minimum lot size of the underlying zone is currently ten acres, and that minimum lot size will apply on the subject property area.

(d) If, on October 4, 2000, a local government's land use regulations specify a minimum lot size smaller than two acres, the area of any new lot or parcel created shall equal or exceed two acres.

**FINDING:** As stated, the County's land use regulations do not specify a minimum lot size smaller than two acres.

(e) A local government may authorize a planned unit development (PUD), specify the size of lots or parcels by averaging density across a parent parcel, or allow clustering of new dwellings in a rural residential area only if all conditions set forth in paragraphs (7)(e)(A) through (7)(e)(H) are met:

\*\*\*\*\*

**FINDING:** The current proposal does not include a Planned Unit Development.

(f) Except as provided in subsection (e) of this section, a local government shall not allow more than one permanent single-family dwelling to be placed on a lot or parcel in a rural residential area. Where a medical hardship creates a need for a second household to reside temporarily on a lot or parcel where one dwelling already exists, a local government may authorize the temporary placement of a manufactured dwelling or recreational vehicle."

**FINDING:** In conformance with this section, the County is not proposing to allow more than one permanent single-family dwelling to be placed on any lot or parcel in the proposed rural residential area.

(g) In rural residential areas, the establishment of a new mobile home park or manufactured dwelling park as defined in ORS 446.003(32) shall be considered an urban use if the density of manufactured dwellings in the park exceeds the density for residential development set by this rule's requirements for minimum lot and parcel sizes. Such a park may be established only if an exception to Goal 14 is taken.

**FINDING:** The current proposal does not include a mobile home park or manufactured dwelling park.

(h) A local government may allow the creation of a new parcel or parcels smaller than a minimum lot size required under subsections (a) through (d) of this section without an exception to Goal 14 only if the conditions described in paragraphs (A) through (D) of this subsection exist:

(A) The parcel to be divided has two or more permanent habitable dwellings on it;

(B) The permanent habitable dwellings on the parcel to be divided were established there before the effective date of this rule;

(C) Each new parcel created by the partition would have at least one of those permanent habitable dwellings on it;

(D) The partition would not create any vacant parcels on which a new dwelling could be established.

(E) For purposes of this rule, habitable dwelling means a dwelling that meets the criteria set forth in ORS 215.283(t)(A)-(t)(D).

**FINDING:** Because the County is not allowing the creation of new parcels smaller than the minimum lot size required under subsections (a) through (d), subsections (A) through (E) of this section do not apply to the proposal.

(i) For rural residential areas designated after the effective date of this rule, the affected county shall either:

(A) Require that any new lot or parcel have an area of at least ten acres, or

(B) Establish a minimum lot size of at least two acres for new lots or parcels in accordance with the requirements of Section (6). The minimum lot size adopted by the county shall be consistent with OAR 660-004-0018, 'Planning and Zoning for Exception Areas.'"

**FINDING:** In this case, the County is establishing an overall density of residential development allowed as a ratio of one dwelling for every ten acres.

### **3. Justification for a Zone Change:**

#### **3.1 Zoning Ordinance - Chapter 9:**

Chapter 9 of the Wasco County Land Use and Development Ordinance (zoning ordinance), entitled "Zone Change and Ordinance Amendment," includes standards and procedures for zone changes. Section 9.010 states:

“Application for a zone change may be initiated as follows:

\*\*\*\*\*

C. By application filed with the Director of Planning upon forms prescribed by the Director of Planning and signed by a property owner with the area of the proposed change, and containing such information as may be required by the [Director of Planning]<sup>1</sup> to establish the criteria for the change (quasi-judicial only);”

As indicated previously, this zone change was initiated by property owner David Wilson. Planning staff is presenting the proposal with a recommendation for approval.

### **3.2 Zoning Ordinance - Section 9.020**

Section 9.020, entitled “Criteria for Decision,” provides as follows:

“The Approving Authority may grant a zone change only if the following circumstances are found to exist:

- A. The original zoning was the product of a mistake; or
- B. It is established that
  - 1. The rezoning will conform with the Comprehensive Plan; and,
  - 2. The site is suitable to the proposed zone;
  - 3. There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.”

**3.2.1** This request is for a plan amendment and an exception to Goal 4. The previous section of this discussion establishes that the current F-2(80) zoning can be considered a mistake given the location and characteristics of the subject property and its relationship to surrounding residential uses.

**3.2.2.** This narrative and the attached exhibits also establish that the requirements of subsection B. have been met: B(1) is met because the Comprehensive Plan is being amended specifically to support the proposed zoning designation; B(2) is met because the site is suitable to the proposed F-F(10) zone; and B(3) is met because through this zone change application and process

---

<sup>1</sup> Missing text in published version of Section 9.010.

there has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.

**3.2.3.** The Wasco County Comprehensive Plan contains goals that mirror the statewide goals, and policies to carry them out. Except as discussed in these findings, the plan does not contain approval standards that apply to the requested zone change. The zone change is proposed with due consideration of all relevant comprehensive plan goals and policies, as required by section B(1):

#### Goal 1 - Citizen Involvement.

The purpose of Goal 1 is to ensure the “opportunity for citizens to be involved in all phases of the planning process.” Wasco County has incorporated opportunities in its Comprehensive Plan and the zoning ordinance. Compliance with Goal 1 is demonstrated by compliance with the applicable plan and zoning ordinance provisions with opportunity for public input and by the public hearings required as part of this application and process.

#### Goal 2 – Land Use Planning.

The County's land use planning goal requires that procedures be established and followed to ensure public participation in land use decision making, and that there is an “adequate factual base” for land use decisions. All applicable procedures have or will be complied with in the consideration of this proposal. These findings and the record of this proceeding are a more than adequate factual base for the decision.

#### Goal 3 - Agricultural Lands.

Goal 3 provides for the preservation of Agricultural Lands for farm use. There are no Goal 3 designated Agricultural Lands on the subject property and Goal 3 therefore does not apply.

#### Goal 4 -- Forest Lands.

Goal 4 provides for the preservation of Forest Lands. The subject property is currently designated Forest Land, but is not now in timber production and has not historically been in timber production. As discussed in the preceding sections of this discussion, the subject property is not generally suitable for commercial forestry due to its development and use as residential property; its proximity to other residential properties; and its soil characteristics and historic uses. The proposal is to redesignate the property for rural residential uses, which will not have any impact on lands actually being used for commercial forestry.

#### Goal 5 - Open Spaces, Scenic and Historic Areas and Natural Resources.

The County zoning ordinances contain siting and development criteria, found in zoning ordinance section 3.920, for lands within Division 8 - Sensitive Wildlife Habitat Overlay designated areas in the County. The subject property is within the Sensitive Wildlife Habitat Overlay. Goal 5 is met by the application of these standards to any development of the subject

property. No other inventoried Goal 5 resources are affected by the proposal. The proposal complies with Goal 5.

#### Goal 6 - Air, Land and Water Quality.

Goal 6 is "To maintain and improve the quality of the air, water and land resources of the state." The proposal is consistent with Goal 6. The subject property is not located in or near a federal air quality attainment area, and will not generate significant additional air pollution. Sewage disposal from potential additional new dwellings must comply with all state and local requirements. Those requirements ensure that such discharges will be properly treated and disposed of, and will not threaten to exceed the carrying capacity of, or degrade or threaten the availability of, area natural resources. The proposal complies with Goal 6.

#### Goal 7 -- Areas Subject to Natural Disasters and Hazards.

The subject property is not within any areas identified by the County as Natural Hazard Areas.

#### Goal 8 -Recreational Needs.

Goal 8 is "To satisfy the recreational needs of the citizens of Wasco County and visitors." None of the policies of Goal 8 apply to the proposal.

#### Goal 9 -- Economy of the State.

Goal 9 is "To diversify and improve the economy of Wasco County." The proposal promotes Goal 9 by allowing residential uses, which the County considers to be the appropriate use of the subject property in view of existing development. The proposal is consistent with, and promotes Goal 9.

#### Goal 10 -- Housing.

Goal 10 is "To provide for the housing needs of the citizens of Wasco County." There is an ongoing need for developable rural residential lots, and corresponding pressure on resource lands to fill that need. The proposed zone change helps to ameliorate that pressure by creating potential rural residential lots while having no impact on lands actually in forest production.

#### Goal 11 -- Public Facilities and Services.

Goal 11 is to "plan and develop a timely, orderly, and efficient arrangement of public facilities and services to provide a framework for urban and rural development." The existing services and facilities in the area of the subject property are adequate for the proposal. The subject property adjoins Sevenmile Hill Road. Local fire and police services are provided by the rural fire protection district and the sheriff's office. Neither water nor sewer services are provided to the subject property, but are available on the subject property through individual well(s) and septic tank systems.

#### Goal 12 -Transportation.

Goal 12 is “To provide and encourage a safe, convenient and economic transportation system.” The goal does not have approval standards, and is otherwise implemented through County transportation planning. The proposal will have little if any impact on the transportation system serving the subject property because there will be minimal increase in traffic generated by development that might occur as a result of the zone change. It is estimated that a maximum of 3 additional residences could be developed. Each residence is predicted to generate an average of 9.57 trips/day, which will not significantly affect the functionality, capacity, or level of service of Sevenmile Hill Road or other local roads. In connection with Goal 12, the County is required to apply the Transportation Planning Rule located in Chapter 660, Division 12 of the Oregon Administrative Rules. OAR 660-12-060 requires amendments to comprehensive plans that “significantly affect a transportation facility...assure that allowed land uses are consistent with the identified function, capacity, and level of service of the facility.” Sevenmile Hill/State Road is classified as a Rural Major Collector, which is consistent with the level of traffic from the rural residential uses that feed into it.

#### Goal 13 - Energy Conservation.

This Goal is met by application of development standards contained in the zoning ordinance.

#### Goal 14-Urbanization.

The level of existing development and possible development does not constitute “urban use.” Goal 14 does not, therefore, apply. It should be noted, however, that Policy 3 of Goal 14 encourages “subdivisions to be developed by a planned development approach, maximizing physical design, the retention of open space and reducing adverse impacts. The proposed zone change for the subject property is consistent with that policy.

**3.2.5** Subsection B(2) of zoning ordinance section 9.020 requires that the site be shown to be “suitable to the proposed use.” The proposed zone would allow, outright, farm and forest uses and dwellings on parcels of at least ten acres in conjunction with farm or forest uses. In discussing the Forest-Farm zone, zoning ordinance section 3.220.A. states:

“The purpose of the Forest-farm zone is to permit those lands which have not been in commercial agriculture or timber production to be used for small-scale, part-time farm or forest units by allowing residential dwellings in conjunction with a farm use while preserving open space and other forest uses.”

**3.2.5..1.** The Forest-Farm zone is not a resource zone. (See October 11, 1995 non-resource determination letter Exhibit WC-Q, Betzing Record). In this case, it is the most suitable designation for the subject property,

which has been physically developed and entirely committed to nonresource use due to its location in close proximity to major county rural residential areas. The area is suitable to the proposed use as described in the attached exhibits and otherwise as described in the reports and testimony received in this proceeding.

**3.2.5..2.** The history of the area is also relevant to addressing this standard. As discussed in the Irrevocably Committed section of this discussion, the extensive parcelization that took place to the west, north, and east of the subject property has resulted, over time, in the building and commitment of the surrounding area to non-resource, rural residential uses. As explained in previous sections of this narrative, the presence of dwellings in and adjacent to the subject property complicates and increases the cost of commercial forestry in that area in a manner rendering commercial forestry impracticable.

**3.2.6** Subsection B(3) of zoning ordinance section 9.020 requires, prior to approval of a zone change, that it be established that “There has been a conscious consideration of the public health, safety and welfare in applying the specific zoning regulations.” The exhibits and record of this proceeding support a finding of compliance with this requirement. This requirement for rezoning has been met.

### **3.3 Zoning Ordinance – Section 9.030**

Section 9.030 requires review of the proposed action to determine whether it significantly affects a transportation facility. As discussed in Section 1.8, the proposed zone change will not significantly affect a transportation facility.

### **3.4 Zoning Ordinance – Section 9.040**

Section 9.040 allows for the imposition of such reasonable conditions “as are necessary to insure the compatibility of a zone change to surrounding uses and as are necessary to fulfill the general and specific purposes of this Ordinance.” The Section lists without limitation eight general categories of areas which may be conditioned to achieve the desired compatibility. Because the minimum lot size in the proposed zone change is 10 acres, because the uses surrounding the subject property are almost entirely rural residential, and because any future development will require compliance with applicable building and development standards, no conditions are necessary as part of this application to ensure the compatibility of the subject property to the surrounding uses.

### **3.5 Zoning Ordinance – Section 9.060 – 9.080**

Sections 9.060 through 9.080 require that the Planning Commission hold a hearing on the proposed zone change and make a recommendation to the County Board of Commissioners, which shall then take such action as it deems appropriate no sooner than twenty days after receipt of the Planning Commission’s recommendation.

## CONCLUSION

Because of the unique circumstances of the relationship between the subject property and surrounding land as explained above, the proposed residential uses will not commit adjacent or nearby resource land to nonresource use. The rural residential uses allowed are compatible with nearby resource use. Based upon all of the findings of fact and conclusions of law set forth above, the Planning Director recommends approval of the exception and zone change and recommends that the subject property be rezoned to F-F(10), and that the corresponding Plan, map and ordinance changes be made.

Kelly Howsley Glover, Interim Planning Director  
Wasco County  
2705 E 2<sup>nd</sup> Street  
The Dalles, Oregon 97058

SENT VIA E-MAIL

**Re:** Wasco County Grant No. TA-23-207 Agreement for County Comprehensive Plan Guidebook

Dear Kelly:

The Department of Land Conservation and Development (DLCD) is pleased to offer Wasco County a grant in the amount of \$8,000 for the County Comprehensive Plan Guidebook. You will find the grant agreement in an attached PDF file. Please read it carefully.

Please e-sign the contract at page 8, or print, sign and scan the signed page. The agreement must be signed by Wasco County and pages 1-8 of the agreement returned to DLCD. Whether returning the signed agreement via mail or e-mail, it must be received by DLCD's Salem office within 30 days of the date of this letter. If the signed agreement is not received by **April 1, 2022**, this offer may be withdrawn.

The attached grant agreement is not in effect until signed by Wasco County and DLCD. An electronic file of the agreement with both signatures will be returned to you for your records. Funds will be sent to you in accordance with the payment schedule in the grant agreement. Please note that we can reimburse only eligible costs incurred after all parties have signed and before the termination date of this agreement.

If you have questions about the agreement, please contact me at 971-345-1987 or [DLCD.GFGrant@dlcd.oregon.gov](mailto:DLCD.GFGrant@dlcd.oregon.gov). If you have other questions about the project, please contact your grant manager, Angie Brewer, at 541-306-8530 or [angie.brewer@dlcd.oregon.gov](mailto:angie.brewer@dlcd.oregon.gov).

Yours truly,

Angela Williamson  
Grants Administrative Specialist

cc: Angie Brewer, DLCD Regional Representative

**Signature**

Grantee shall return a signed agreement to DLCD by e-mail within thirty (30) days of the Offer Date. If not signed and returned without modification by Grantee within thirty (30) days of the Offer Date, the DLCD Grant Program Manager may terminate this offer of the grant award. Upon receipt of the Agreement signed by Grantee, the DLCD Grant Program Manager shall sign and return a digital copy of the signed document via e-mail.

**List of Products**

Preliminary report: Project staff with contact information, advisory committee membership, and refinement of scope by May 1, 2022 (Project Requirement 7)

Signed agreement: between the Grantee and consultant, no later than three business days after both parties have signed the agreement. (Project Requirement 6)

Task 1: Inclusive Outreach Plan

Task 2: Guidebook Template

Task 3: Draft Guidebook

Task 4: Final Guidebook

Task 5: Distribution of Guidebook

Task 6: Equity and Inclusion Self-Assessment

Grantee and the consultant will provide all draft and final Products, including memos, reports, and maps produced by this grant agreement in a digital media format. The term “digital media” means a compact disc, digital video disc, USB flash drive, e-mail, or FTP submittal authorized by DLCD.

STATE OF OREGON  
DEPARTMENT OF LAND CONSERVATION AND DEVELOPMENT  
2021-2023 TECHNICAL ASSISTANCE GRANT  
AGREEMENT

**DLCD Grant Number:** TA-23-207

**Wasco County**

This agreement (“Agreement”) is made and entered into by and between the **State of Oregon, acting by and through its Department of Land Conservation and Development**, hereinafter referred to as “DLCD,” and **Wasco County**, hereinafter referred to as “Grantee,” and collectively referred to as the “Parties.”

1. **Effective Date and Availability of Grant Funds.** This Agreement is effective on the date on which every party has signed this Agreement and all required State approvals have been obtained (“Effective Date”). Grant Funds under this Agreement are available for eligible costs as defined in Sections 4 and 6 incurred beginning on the Effective Date and ending on the earlier of the termination of this Agreement or the Project End Date provided in Attachment A. DLCD’s obligation to disburse Grant Funds under this Agreement ends 60 days after the earlier of termination of this Agreement or the Project End Date.
2. **Agreement Documents.** The Agreement consists of this agreement (without any attachments) and the following Attachments, all of which are attached hereto and incorporated by reference:

Attachment A: **Project Description and Budget**

Attachment B: **DLCD Contact Names and Addresses**

Attachment C: **Request for Product Reimbursement Form and Instructions**

In the event of a conflict between two or more of the documents comprising this Agreement, the language in the document with the highest precedence shall control. The precedence of each of the documents comprising this Agreement is as follows: this Agreement without Attachments; Attachments as listed, in descending order of precedence.

3. **Grant Funds.** The maximum, not-to-exceed, grant amount that the DLCD will pay to Grantee is **\$8,000** (the “Grant Funds”). Disbursements will be made only in accordance with the schedule and requirements contained in this Agreement, including Attachment A.
4. **Project.** The Project is described in Attachment A. Grant Funds may be used solely for the Project described in Attachment A and may not be used for any other purpose. No Grant Funds will be disbursed for any changes to the Project unless such changes are approved by DLCD by amendment pursuant to Section 9 hereof. Grantee agrees to implement the Project in accordance with the terms and conditions of this Agreement and complete the Project no later than the Project End Date.
5. **Reports.** Grantee shall submit the reports required by this section to the DLCD Grant Manager and Grants Administrative Specialist in writing by personal delivery, e-mailing, or mailing at the address or number set forth in Attachment B or to such other addresses or numbers as DLCD may specify by notice to Grantee in accordance with Section 8 hereof.

- a. **Progress Reports.** Grantee will submit a written status report at the request of the DLCD Grant Manager or as required in the Project Requirements in Attachment A.

- b. **Financial Reimbursement Reports.** In order to receive reimbursement, Grantee must submit to DLCD requests for reimbursement of eligible costs incurred in producing Product(s), as provided in Attachment A, on the form provided in Attachment C. Grantee shall submit a closeout report to DLCD within 30 days after the termination of the Agreement or the Project End Date, whichever is earlier. Reimbursements for products will be reduced or withheld if Progress or Closeout Reports have not been timely submitted or are incomplete.

## 6. Disbursement and Recovery of Grant Funds.

- a. **Disbursement Generally.** DLCD will disburse the Grant Funds as reimbursement for eligible costs incurred to produce Products in carrying out the Project, up to the amount provided in Section 3, and subject to the timelines and limits for each Task, as specified in Exhibit A. Grantee may request a reimbursement after completion of a Product. Reimbursements will be made by DLCD within 30 days of DLCD's approval of a request for reimbursement. Eligible costs are the reasonable and necessary costs incurred by Grantee, during the period specified in Section 1, in performance of the Project and that are not excluded from reimbursement by DLCD, either by this Agreement or by exclusion as a result of financial review or audit.
- b. **Conditions Precedent to Disbursement.** DLCD's obligation to disburse Grant Funds to Grantee is subject to satisfaction, with respect to each disbursement, of each of the following conditions precedent:
  - i. DLCD has received funding, appropriations, limitations, allotments or other expenditure authority sufficient to allow DLCD, in the exercise of its reasonable administrative discretion, to make the disbursement.
  - ii. Grantee is in compliance with the terms of this Agreement.
  - iii. Grantee's representations and warranties set forth in Section 7 hereof are true and correct on the date of disbursement with the same effect as though made on the date of disbursement.
  - iv. Grantee has provided to DLCD a request for reimbursement in accordance with Section 5.b hereof. Grantee must submit its final request for reimbursement no later than 30 days after the earlier of termination of this Agreement or the Project End Date. Grantee will not disburse Grant Funds in response to reimbursement requests submitted after that date.

## 7. Representations and Warranties of Grantee. Grantee represents and warrants to DLCD as follows:

- a. **Organization and Authority.** Grantee is duly organized and validly existing under the laws of the State of Oregon and is eligible to receive the Grant Funds. Grantee has full power, authority, and legal right to make this Agreement and to incur and perform its obligations hereunder, and the making and performance by Grantee of this Agreement (1) have been duly authorized by all necessary action of Grantee and (2) do not and will not violate any provision of any applicable law, rule, regulation, or order of any court, regulatory commission, board, or other administrative agency or any provision of Grantee's organizational documents, (3) do not and will not result in the breach of, or constitute a default or require any consent under any other agreement or instrument to which Grantee is a party or by which Grantee or any of its properties may be bound or affected. No authorization, consent, license, approval of, filing or

registration with or notification to any governmental body or regulatory or supervisory authority is required for the execution, delivery or performance by Grantee of this Agreement.

- b. **Binding Obligation.** This Agreement has been duly executed and delivered by Grantee and constitutes a legal, valid and binding obligation of Grantee, enforceable in accordance with its terms subject to the laws of bankruptcy, insolvency, or other similar laws affecting the enforcement of creditors' rights generally.

The warranties set in this section are in addition to, and not in lieu of, any other warranties set forth in this Agreement or implied by law.

8. **Notices.** Except as otherwise expressly provided in this Agreement, any notices to be given hereunder shall be given in writing by personal delivery, e-mailing, or mailing the same by registered or certified mail, postage prepaid, to the Grantee's Grant Representative or DLCD's Grant Manager, as the case may be, at the address or number set forth in Attachment B, or to such other addresses or numbers as either party may indicate pursuant to this section. Any notice delivered by e-mail shall be effective on the day the party receives the transmission if the transmission was during normal business hours of the receiving party, or on the next business day if transmission was outside normal business hours of the receiving party. Any notice given by personal delivery shall be effective when actually delivered. Any notice given by mail shall be effective three days after deposit in the mail.
9. **Amendments.** The terms of this Agreement will not be waived, altered, modified, supplemented, or amended, in any manner whatsoever, except by written instrument signed by the Parties (or in the case of a waiver, by the party against whom the waiver is sought to be enforced). If the Grantee wishes to amend the Agreement, the Grantee must submit a written request, including a justification for any amendment, to the DLCD Grant Manager at least 90 calendar days before the Project End Date.
10. **Default.** Reimbursements to Grantee may be withheld or reduced if DLCD determines that Project performance under this Agreement is unsatisfactory, or if one or more terms or conditions of this Agreement have not been met. The amount of Grant Funds withheld will be based on the best professional judgment of the DLCD Grant Manager and Grant Program Manager.
11. **Ownership of Product(s).**
- a. **Definitions.** As used in this Section 11 and elsewhere in this Agreement, the following terms have the meanings set forth below:
- i. **"Grantee Intellectual Property"** means any intellectual property owned by Grantee and developed independently from the Project.
- ii. **"Third Party Intellectual Property"** means any intellectual property owned by parties other than DLCD or Grantee.
- iii. **"Product(s)"** means every invention, discovery, work of authorship, trade secret or other tangible or intangible item and all intellectual property rights therein that Grantee is required to deliver to DLCD or create pursuant to the Project, including but not limited to any Product(s) described in Attachment A.
- b. **Non-Exclusive License.** Grantee hereby grants to DLCD, under Grantee Intellectual Property and under intellectual property created by Grantee pursuant to the Project, an irrevocable, non-exclusive, perpetual, royalty-free license to use, reproduce, prepare derivative works based upon,

distribute copies of, perform and display the Product(s) for governmental purposes, and to authorize others to do the same on DLCD's behalf. If a Product(s) created by Grantee pursuant to the Project is a derivative work based on Third Party Intellectual Property, or is a compilation that includes Third Party Intellectual Property, Grantee shall secure on DLCD's behalf and in the name of DLCD an irrevocable, non-exclusive, perpetual, royalty-free license to use, reproduce, prepare derivative works based upon, distribute copies of, perform and display, for governmental purposes, the pre-existing elements of the Third Party Intellectual Property employed in the Product(s), and to authorize others to do the same on DLCD's behalf. If a Product(s) is Third Party Intellectual Property, Grantee shall secure on DLCD's behalf and in the name of DLCD, an irrevocable, non-exclusive, perpetual, royalty-free license to use, reproduce, prepare derivative works based upon, distribute copies of, perform and display, for governmental purposes, the Third Party Intellectual Property, and to authorize others to do the same on DLCD's behalf.

## **12. Indemnity.**

- a. **GENERAL INDEMNITY.** SUBJECT TO THE LIMITS OF THE OREGON CONSTITUTION AND STATE OF OREGON TORT CLAIMS ACT, IF APPLICABLE TO GRANTEE, GRANTEE SHALL INDEMNIFY, DEFEND AND HOLD HARMLESS DLCD, THE STATE OF OREGON AND THEIR AGENCIES, SUBDIVISIONS, OFFICERS, DIRECTORS, EMPLOYEES AND AGENTS FROM AND AGAINST ALL CLAIMS, SUITS, ACTIONS, LOSSES, DAMAGES, LIABILITIES, COSTS AND EXPENSES OF ANY NATURE WHATSOEVER, INCLUDING ATTORNEY FEES, ARISING OUT OF, OR RELATING TO THE ACTS OR OMISSIONS OF GRANTEE OR ITS OFFICERS, EMPLOYEES, SUBCONTRACTORS, OR AGENTS UNDER THIS AGREEMENT.
- b. **CONTROL OF DEFENSE AND SETTLEMENT.** GRANTEE SHALL HAVE CONTROL OF THE DEFENSE AND SETTLEMENT OF ANY CLAIM THAT IS SUBJECT TO SECTIONS 12.a; HOWEVER, NEITHER GRANTEE NOR ANY ATTORNEY ENGAGED BY GRANTEE SHALL DEFEND THE CLAIM IN THE NAME OF THE STATE OF OREGON OR ANY AGENCY OF THE STATE OF OREGON, NOR PURPORT TO ACT AS LEGAL REPRESENTATIVE OF THE STATE OF OREGON OR ANY OF ITS AGENCIES, WITHOUT FIRST RECEIVING FROM THE OREGON ATTORNEY GENERAL, IN A FORM AND MANNER DETERMINED APPROPRIATE BY THE ATTORNEY GENERAL, AUTHORITY TO ACT AS LEGAL COUNSEL FOR THE STATE OF OREGON. NOR SHALL GRANTEE SETTLE ANY CLAIM ON BEHALF OF THE STATE OF OREGON WITHOUT THE APPROVAL OF THE ATTORNEY GENERAL. THE STATE OF OREGON MAY, AT ITS ELECTION AND EXPENSE, ASSUME ITS OWN DEFENSE AND SETTLEMENT IN THE EVENT THAT THE STATE OF OREGON DETERMINES THAT GRANTEE IS PROHIBITED FROM DEFENDING THE STATE OF OREGON, OR IS NOT ADEQUATELY DEFENDING THE STATE OF OREGON'S INTERESTS, OR THAT AN IMPORTANT GOVERNMENTAL PRINCIPLE IS AT ISSUE AND THE STATE OF OREGON DESIRES TO ASSUME ITS OWN DEFENSE.

13. **Recovery of Grant Moneys.** Any Grant Funds disbursed to Grantee under this Agreement that are expended in violation or contravention of one or more of the provisions of this Agreement ("Misexpended Funds") or that remain unexpended on the earlier of termination of this Agreement or the Project End Date must be returned to DLCD. Grantee shall return all Misexpended Funds to DLCD promptly after DLCD's written demand and no later than fifteen (15) days after DLCD's

written demand. Grantee shall return all Unexpended Funds to DLCD within fifteen (15) days after the earlier of termination of this Agreement or the Project End Date.

**14. Termination:**

- a. **DLCD's Right to Terminate at its Discretion.** At its sole discretion, DLCD may terminate this Agreement:
  - i. **For its convenience** upon thirty (30) days' prior written notice by DLCD to Grantee;
  - ii. **Immediately upon written notice** if DLCD fails to receive funding, appropriations, limitations, allotments or other expenditure authority at levels sufficient to allow DLCD, in the exercise of its reasonable administrative discretion, to continue to make disbursement under this Agreement; or
  - iii. **Immediately upon written notice** if federal or state laws, regulations, or guidelines are modified or interpreted in such a way that the Project is no longer allowable or no longer eligible for funding under this Agreement.
- b. **DLCD's Right to Terminate for Cause.** In addition to any other rights and remedies DLCD may have under this Agreement, DLCD may terminate this Agreement immediately upon written notice by DLCD to Grantee, or at such later date as DLCD may establish in such notice, after the occurrence of any of the following events:
  - i. **Grantee is in default** because Grantee institutes or has instituted against it insolvency, receivership or bankruptcy proceedings, makes an assignment for the benefit of creditors, or ceases doing business on a regular basis;
  - ii. **Grantee is in default** because Grantee commits any material breach or default of any covenant, warranty, obligation or agreement under this Agreement, fails to perform any of its obligations under this Agreement within the time specified herein or any extension thereof, or so fails to pursue its work hereunder as to endanger Grantee's performance under this Agreement in accordance with its terms, and such breach, default or failure is not cured within fourteen (14) calendar days after DLCD's notice, or such longer period as DLCD may specify in such notice.
- c. **Grantee's Right to Terminate for Cause.** Grantee may terminate this Agreement by written notice to DLCD if DLCD is in default because DLCD fails to pay Grantee any amount due pursuant to the terms of this Agreement, and DLCD fails to cure such failure within thirty (30) calendar days after Grantee's notice or such longer period as Grantee may specify in such notice; or
- d. **Termination** under Section 14 shall be without prejudice to any claims, obligations, or liabilities either party may have incurred prior to such termination.

- 15. Accounting and Fiscal Records:** Grantee shall maintain its fiscal records related to this Agreement in accordance with generally accepted accounting principles. The Grantee shall maintain records of the receipt and expenditure of all funds subject to this Agreement for a period of six (6) years after the Project End Date, or for such longer period as may be required by applicable law or until the conclusion of any audit, controversy or litigation arising out of or related to this Agreement, whichever date is later. Accounting records related to this Agreement will be separately maintained from other accounting records.

16. **Governing Law, Consent to Jurisdiction.** This Agreement shall be governed by and construed in accordance with the laws of the State of Oregon without regard to principles of conflicts of law. Any claim, action, suit or proceeding (collectively, "Claim") between DLCD (or any other agency or department of the State of Oregon) and Grantee that arises from or relates to this Agreement shall be brought and conducted solely and exclusively within the Circuit Court of Marion County in the State of Oregon. In no event shall this section be construed as a waiver by the State of Oregon of any form of defense or immunity, whether sovereign immunity, governmental immunity, immunity based on the eleventh amendment to the Constitution of the United States or otherwise, from any Claim or from the jurisdiction of any court. Each party hereby consents to the exclusive jurisdiction of such court, waives any objection to venue, and waives any claim that such forum is an inconvenient forum.
17. **Audit.** The Oregon Secretary of State, Attorney General of the State of Oregon and the Director of DLCD or any other duly authorized representative of DLCD shall have access to and the right to examine any records of transactions related to this Agreement for six (6) years after the final disbursement of Grant Funds under this Agreement is authorized by DLCD.
18. **Counterparts.** This Grant Agreement may be executed in any number of counterparts, and any single counterpart or set of counterparts signed, in either case, by all the parties hereto shall constitute a full and original instrument, but all of which shall together constitute one and the same instrument.
19. **Survival.** All agreements, representations, and warranties of Grantee shall survive the execution and delivery of this Agreement, any investigation at any time made by DLCD or on its behalf and the making of the Grant.
20. **Successors and Assigns.** Recipient may not assign this Agreement or any right hereunder or interest herein, in whole or in part, without the prior written consent of DLCD. This Agreement shall be binding upon and shall inure to the benefit of the parties and their respective permitted successors and assigns.
21. **Validity and Severability.** If any provision of this Agreement is held to be invalid, such event shall not affect, in any respect whatsoever, the validity of the remainder of this Agreement and the remainder shall be construed without the invalid provision so as to carry out the intent of the parties to the extent possible without the invalid provision.
22. **Relationship of the Parties.** Nothing contained in this Agreement or any acts of the parties hereto shall be deemed or construed to create the relationship of principal and agent, or of partnership, or of joint venture or of any other association other than that of independent contracting parties.
23. **No Third Party Beneficiary Rights.** No person not a party to this Agreement is an intended beneficiary of this Agreement, and no person not a party to this Agreement shall have any right to enforce any term of this Agreement.
24. By signing this Agreement the Parties each represents and warrants that it has the power and authority to enter into this Agreement and that the Agreement is executed by its duly authorized representative. By signing the document, Grantee agrees to comply with the terms of this Agreement.

**Grantee:** Wasco County

**Grant No.** TA-23-207

<b>Gordon Howard</b>		
Signature of DLCD Grant Program Manager		

### **PROJECT PURPOSE STATEMENT**

Staff will produce a guidebook, based on recent Periodic Review experience, to help under-resourced counties update their Comprehensive Plans by offering templates, recommendations, and case studies. Modernizing comprehensive plans ensures county planning departments can be responsive to their communities needs and more proactively pursue other important land use requirements and opportunities.

### **PROJECT OVERVIEW AND MANAGEMENT**

Overall management of the Project will be the responsibility of the Grantee and assisted by the DLCD Grant Manger. Specific Project management duties of Grantee will include:

- a. Organizing and managing the advisory committee;
- b. Selecting a consultant and contracting for consultant services;
- c. Overseeing consultant work described in this Project Description;
- d. Scheduling and managing meetings, including activities such as, preparing and distributing meeting notices, agendas, and summaries; and assisting the consultant with meeting facilitation.

Staff will produce an approximately 50 to 75-page guidebook based on recent experience. Staff will manage a consultant for the graphic design work and compilation of the final guide document.

#### ***Advisory Committees***

No advisory committee will be used to prepare the guidebook.

#### ***Agency Role***

DLCD will provide financial, administrative, and technical assistance to the Project. DLCD supports the collaborative, regional approach envisioned in the Project and agrees to work equally and fairly with each jurisdiction to help assure that state and local interests are optimized. DLCD recognizes the Periodic Review Guidebook will inform, but will not bind, future land use decisions of the cooperating jurisdictions.

#### ***Consultant Role***

The Project will use consultant services to perform graphic design and digital compilation of text and materials provided by staff from recent efforts in their completion of Voluntary Periodic Review. The consultant is expected to compile the text, data, images, and photographs provided by staff, produce a draft for review, finalize the draft with Staff feedback and produce a final product that can be shared in print and an editable digital format.

#### ***Project Meeting Materials***

The project is a guidebook based on recent public process that has come to an end. There are no new meetings scheduled to compile this resource.

#### ***Project Schedule***

The schedule identified in “Schedule, Products, and Budget” section of this Project Description will be observed. DLCD may require an amendment to this Agreement if the timeframes in the schedule are not satisfied. The Project End Date is May 31, 2023.

### ***Expectations for All Written and Graphic Products***

All reports and Products will be delivered to the DLCD Grant Manager according to the schedule provided in this Project Description.

All reports, studies, and other documents produced under the Project must bear the statement in Project Requirement 3, below.

Grantee and the consultant will provide all draft and final Products, including memos, reports, and maps produced by this Agreement in a digital media format. The term “digital media” means a compact disc, digital video disc, USB flash drive, e-mail, or FTP submittal authorized by DLCD.

## **PROJECT REQUIREMENTS**

Grantee agrees to carry out the Project and submit Products in accordance with the requirements in this section.

1. Grantee will produce and submit to DLCD those Products as specified in this Agreement and this Project Description and Budget.
2. Grantee will provide copies of all final Product(s) produced under this Agreement to DLCD in the manner described in this Project Description.
3. All reports, studies, and other documents produced under the Project must indicate on the cover or the title page an acknowledgement of the financial assistance provided by DLCD by bearing the following statement: “This project is funded by Oregon general fund dollars through the Department of Land Conservation and Development. The contents of this document do not necessarily reflect the views or policies of the State of Oregon.”
4. Grantee will identify the location of the originals of any Product(s) if a copy is submitted to DLCD or if the product is one-of-a-kind document.
5. Grantee will provide all letters, memos, reports, charts, products and maps produced under this Agreement in a digital media format.
6. Grantee will provide a legible copy of the signed agreement between the jurisdiction and the contractor no later than three business days after both parties have signed the agreement.
7. Grantee will complete the following by May 1, 2022:
  - a. Identify relevant impacted priority populations and devise a community outreach and inclusion plan.
8. It is understood that this product will not be an adopted document.
9. Any notice issued by Grantee that is eligible for reimbursement under ORS 215.503 – Notice to county property owners for costs incurred for Measure 56 – is not reimbursable under this Agreement.
10. Grantee will submit a written status report at the request of the DLCD Grant Manager at any time outside of the payment schedule in addition to the reports submitted with Attachment C.

11. DLCD will provide no more than one interim payment before the Project End Date and a final payment. Payments will be made only upon submittal of qualifying Product(s) and progress report(s) in accordance with the terms of this Agreement and Attachment C. The report(s) must describe the progress to date on each Task(s) or Product(s) undertaken during the billing period. Other written or verbal progress reports will be provided upon reasonable request by the DLCD Grant Manager.
12. Payments under this Agreement may be reduced if Product(s) scheduled to be completed are not completed by the timeline provided in the Project Description. DLCD's payment obligations under this Agreement are conditioned upon DLCD receiving funding, appropriations, limitations, allotments, or other expenditures authority sufficient to allow DLCD in the exercise of its reasonable administrative discretion, to meet its payment obligations under this Agreement.

## **SCHEDULE, PRODUCTS, AND BUDGET**

### **Pre-Task Submittals**

The contract in Project Requirement 6 and the report in Project Requirement 7 in this Project Description and Budget will be submitted.

***Pre-task Timeline:*** By the dates specified in those requirements.

***Pre-task report budget:*** \$0

### **Task 1: Inclusive Outreach Plan**

Staff will develop a section in the guidebook to support the development of inclusive outreach and engagements plans, supporting the participation of priority populations in settings of steering or citizen advisory committees.

#### ***Task 1 Products:***

The guidebook will provide recommendations, resources, and templates to assemble an inclusive outreach plan for the periodic review process, particularly in rural communities. In rural Oregon, the primary populations are extremely low income, community members with limited English proficiency, homeless populations, and people with disabilities. This is often exacerbated by limited access to high-speed internet, significant distance between rural communities and therefore public meetings, and lack of public transportation.

***Task 1 Timeline:*** December 30, 2022

***Task 1 budget:*** \$500

### **Task 2: Guidebook Template**

Build outline for content, sub-contract graphic artist, discuss layout and overall design.

#### ***Task 2 Products:***

Draft and final guidebook template

***Task 2 Timeline:*** April 29, 2022

***Task 2 budget:*** \$500

**Task 3 – Draft Guidebook**

Written narrative content, produce templates, and finalize draft.

***Task 3 Products:***

Draft Guidebook

***Task 3 Timeline:*** December 30, 2022

***Task 3 budget:*** \$3,000

**Task 4 – Final Guidebook**

Share draft with graphic artist for clean-up and finalization of images, page numbers, and overall design.

***Task 4 Products:***

Draft and final guidebook

***Task 4 Timeline:*** March 31, 2023

***Task 4 budget:*** \$3,000

**Task 5 – Distribution of Guidebook**

Coordinate with the Association of Oregon County Planning Directors (AOCPD) to share final product at meeting, provide a link on the project website and email to County and State partners.

***Task 5 Products:***

Guidebook in .doc and .pdf format available for download

***Task 5 Timeline:*** May 31, 2023

***Task 5 budget:*** \$500

**Task 6 – Equity and Inclusion Self-Assessment**

Grantee to complete equity and inclusion self-assessment using evaluation framework developed in Task 1. Report describing grantee's performance against its goals for inclusive outreach and engagement for the project to be provided to DLCD.

***Task 6 Products:***

Equity and inclusion self-assessment

***Task 6 Timeline:*** May 31, 2023

***Task 6 budget:*** \$500

**Budget Summary**

Task 1 – Inclusive Outreach Plan	\$ 500
Task 2 – Guidebook Template	\$ 500
Task 3 – Draft Guidebook	\$ 3,000
Task 4 – Final Guidebook	\$ 3,000
Task 5 – Distribution of Guidebook	\$ 500
Task 6 – Equity and Inclusion Self-Assessment	\$ 500
<b>TOTAL</b>	<b>\$ 8,000</b>

2021-2023 Planning Technical Assistance Grant Agreement  
Interim Reimbursement and Closeout Form Instructions**

General and line-by-line instructions for completing the Request for Interim Reimbursement/Final Closeout form are provided herein.

***General Instructions and Reminders***

- This form may be completed by hand or typed on paper or completed in Microsoft Word. If you need a Word file, please contact the Grants Administrative Specialist at [DLCD.GFGrant@dlcd.oregon.gov](mailto:DLCD.GFGrant@dlcd.oregon.gov). In any case, submit the form with the grant Product(s) electronically, as called for in the Agreement.
- This form is used for all reimbursement requests – interim or final.
- It is important that you retain documentation of expenditures as provided in paragraph 16 of the Agreement, which provides that records be maintained for at least six years after the final payment has been received by the grantee.
- Interim and final reimbursement requests must not include work performed prior to the Effective Date of this Agreement (generally the date the Agreement is signed by DLCD) and not after the Closing Date of this Agreement.

***Completing the Form***

Please show *total actual expenditures only* of DLCD grant award and local contributions.

First row: DLCD will complete the Grantee Name and Grant Number. In the Final Payment box, highlight or circle “No” for interim payments and “Yes” for final closeouts.

Second row: DLCD will complete Agreement start and close dates. Complete the “Period covered by this payment” The form includes separate boxes for “from” and “to.” Please complete both. These dates must accurately depict the dates the work for the reimbursable expenditure was incurred. If there are any applicable limits on these dates, they will be provided in the payment descriptions in the “Schedule, Products, and Budget” section of the Agreement.

The next section of the form includes columns for itemizing each expense category:

- **“DLCD Grant Expenditures, Previous Reported”** column -- should be blank if the submission is Payment 1. If the request is for a second or later interim payment or final closeout, enter the sum of previous payments in this “Previously Reported” column.
- **“DLCD Grant Expenditures, This Payment”** column – captures and identifies expenditures for the products that are currently being submitted for review and payment.
- **“DLCD Grant Expenditures, Cumulative”** column – simply the total of the two previous columns.
- **“DLCD Grant Expenditures, Transactions”** – Complete items 1–4 as applicable and item 5, total in the “Previously Reported” column if applicable and in the “This Payment” column. Complete previous and current local contributions in items 6–9 and the total on line 10 if applicable. Local contribution does not include expenses reimbursed by the grant. It is included to provide DLCD with accurate information regarding the cost of projects and/or products completed in compliance with this grant. This category includes both in-kind and cash contributions.
  - **1. Salary and Benefits** includes the grantee’s staff time, including Other Personnel Expenses. Receipts are not required with this report submission.

- **2. Supplies and Services** include allowable grantee supplies used for completion of grant products. Receipts are not required with this report submission.
  - **3. Contracts** include consultants, attorneys, and any company or individual hired by the grantee to conduct grant work. This category does not include employees of the grantee, but rather an individual or entity that invoices the grantee for services rendered. Information required for the closeout report includes name, address, phone number, and e-mail address of the payee. If there are multiple entities, please provide the amount of grant funds allocated for the reimbursement of each.
  - **4. Other** - Provide a brief explanation and cost breakdown for amounts listed as “Other.” Receipts are not required. Note: Grantee travel expenses are not eligible for reimbursement.
  - **5. Totals** – Sum the categories of grant expenditures in the Previously Reported, This Payment, and Cumulative columns. The Total payments at closeout cannot exceed the maximum amount in paragraph 3 of the Agreement.
- Re-enter the payment request from line 5 “DLCD Grant Expenditures This Payment” on line 11.

Certification: Be sure to read and understand the information in item 12 prior to signing the form.

- A legible name and title is required in cell 13.
- A mailing address, including city and zip code, where payment should be sent must be provided in cell 14.
- The signature under “Signature of Authorized Certifying Official” must be of the person taking responsibility for the accuracy of the information contained in the form.

Before a payment can be issued, *all grant products, required documentation, and the signed reimbursement request form* must be received, accepted, and reviewed by the grant manager and grant program manager, subject to the requirements contained in the Agreement.

Please follow the payment schedule as identified in the Grant Agreement when submitting a request for payment or closeout.

A **signed cover letter**, completed and signed **reimbursement request form**, and completed **Products** can be submitted in one of the following ways: (1) the preferred method – an e-mail with PDF files sent to the Grants Administrative Specialist at [DLCD.GFGrant@dlcd.oregon.gov](mailto:DLCD.GFGrant@dlcd.oregon.gov), or (2) via the DLCD FTP site (contact the Grants Administrative Specialist for instructions at 971-345-1987) or (3) a CD or DVD mailed to the address for the Grants Administrative Specialist in Attachment B of the Agreement. If none of these options are possible, mail the relevant documents to:

Salem, OR 97301

## **MOTION**

**SUBJECT: DLCD Grant Agreement**

---

I move to approve The Department of Land Conservation & Development 2021-2023 Technical Assistance Grant Agreement #TA-23-207.

## AGENDA ITEM

### Space Use Agreement

---

[MAUPIN MOU](#)

---

[MOTION LANGUAGE](#)

---

**MEMORANDUM OF UNDERSTANDING  
REGARDING LICENSED (NO CHARGE) USE OF FACILITY AT MAUPIN  
CIVIC CENTER BY WASCO COUNTY PLANNING DEPARTMENT –  
WASCO COUNTY, OREGON PLANNING PERSONNEL**

This Memorandum of Understanding (MOU), is entered into by and between the **CITY OF MAUPIN, OREGON**, an Oregon municipal corporation, (“City”), and **WASCO COUNTY, OREGON**, ACTING BY AND THROUGH THE WASCO COUNTY PLANNING DEPARTMENT (HEREINAFTER: “WASCO COUNTY PLANNING DEPARTMENT”).

**RECITALS:**

- A. WASCO COUNTY PLANNING DEPARTMENT believes that use of an area, access and restroom at the Maupin Civic Center by Wasco County, Oregon Planning Personnel to facilitate Land Use Planning Activities would be beneficial to the Wasco County Planning Department and to the residents of South Wasco County, Oregon. It is intended that WASCO COUNTY PLANNING DEPARTMENT’s use of this area at the Maupin Civic Center will be for processing applications, answering queries and performing activities in the South Wasco County area and would serve as an office for preparation of reports and research and conducting community outreach.
- B. The City of Maupin has found and does find that the intended use of a desk and space at the Maupin Civic Center for the described purposes and as a license, for no compensation and on terms as described below is in the City’s best interest.
- C. The City and WASCO COUNTY PLANNING DEPARTMENT believe that some formalization of an agreement between them regarding the terms, activities and use of the City’s property by the WASCO COUNTY PLANNING DEPARTMENT will foster understanding, cooperation and equity as relates to use of space at the Maupin Civic Center by WASCO COUNTY PLANNING DEPARTMENT.

NOW, THEREFORE, in consideration of the above recitals, which recitals are contractual in nature, the mutual covenants herein contained and such other and further consideration as is hereby acknowledged, the parties agree as follows:

- 1. NATURE OF USE OF SPACE AT MAUPIN CIVIC CENTER: WASCO COUNTY PLANNING DEPARTMENT will be entitled to use, under this license, an identified space at the Maupin Civic Center and identified associated access ways and restroom facilities.
- 2. Such use of this property, owned by the City of Maupin, shall be on the terms and subject to the conditions. as follows:

**Page 1 of 7 — MEMORANDUM OF UNDERSTANDING REGARDING LICENSED (NO CHARGE) USE OF FACILITY AT MAUPIN CIVIC CENTER BY WASCO COUNTY PLANNING DEPARTMENT – WASCO COUNTY, OREGON PLANNING PERSONNEL**

**PAUL F. SUMNER, P.C.**

ATTORNEY AT LAW

185 NW ‘B’ STREET, P.O. BOX 16; MADRAS, OR 97741

(541) 475-7277 [FAX (541) 475-2857]

- a. The use of the facilities shall be by employees of WASCO COUNTY PLANNING DEPARTMENT.
- b. Employees shall not allow other persons into the facility during Maupin Civic Center closed times and will not use the facility for any uses other than official Wasco County planning activities under the direct supervision and control of employees of WASCO COUNTY PLANNING DEPARTMENT.
- c. Employees shall log all entrance and activities observed and encountered during the Employees' use of the facility, when the Civic Center is closed and when extraordinary events are observed. Included in the logs shall be the following:
  - i. Who entered the facility
  - ii. The time of entrance
  - iii. The time of exit
  - iv. Suspicious activities observed
  - v. Any damage or disruption to the Civic Center, observed when entering, exiting or when using the facility
  - vi. Any use of the facility by others during hours when the facility is not open for business
- d. The parties agree that this license shall commence on the executions hereof and shall continue until terminated by the parties with their mutual agreement or upon either party giving 30 days notice to the other party.
- e. WASCO COUNTY PLANNING DEPARTMENT will cooperate with City's maintenance, general upkeep and cleaning of all areas of the Civic Center, including the area being used by WASCO COUNTY PLANNING DEPARTMENT.
- f. During the licensed use of the subject area, City will not enter the space being occupied by the Employees of WASCO COUNTY PLANNING DEPARTMENT except in the presence of a representative of the WASCO COUNTY PLANNING DEPARTMENT, except in the case of emergency, jeopardizing persons and/or property.

### 3. ROLES, CONTRIBUTIONS AND RESPONSIBILITIES

- a. City will provide and will be responsible for:
  - i. Providing utilities, as are currently installed.
  - ii. Communicating schedules, building agendas, meetings, utilities changes and servicing and other scheduled changes which could effect the use of the space allocated for use by the WASCO COUNTY PLANNING DEPARTMENT.
  - iii. Allowing WASCO COUNTY PLANNING DEPARTMENT necessary

- access and exclusive use of the designated space together with all associated access keys and security codes.
- iv. Not disturbing or interfering with WASCO COUNTY PLANNING DEPARTMENT's activities at the licensed area at the Maupin Civic Center and WASCO COUNTY PLANNING DEPARTMENT's use of the licensed area for its intended purpose.
  - v. Not initiating any new activity on or about the licensed area which will or may unreasonably interfere with the activities of WASCO COUNTY PLANNING DEPARTMENT's permitted use of the licensed area.
  - vi. On reasonable request by WASCO COUNTY PLANNING DEPARTMENT and at reasonable times provide agreed assistance to the WASCO COUNTY PLANNING DEPARTMENT for the improvement of the licensed area.
- b. WASCO COUNTY PLANNING DEPARTMENT will provide and will be responsible for:
- i. Maintaining the licensed area consistent with the use of WASCO COUNTY PLANNING DEPARTMENT;
  - ii. Correcting any injury or destruction caused by the WASCO COUNTY PLANNING DEPARTMENT's licensed access, use and occupancy of the Maupin Civic Center.
- c. Restrictions on use of the Site:
- i. The City shall not modify its use of city property around the site such that it interferes with WASCO COUNTY PLANNING DEPARTMENT's permitted use of the site.
  - ii. WASCO COUNTY PLANNING DEPARTMENT shall not modify its use on the property without consent of City. WASCO COUNTY PLANNING DEPARTMENT shall not use the site in any manner other than uses contemplated herein. WASCO COUNTY PLANNING DEPARTMENT shall not modify the premises in any manner, except as agreed with City.
4. WASCO COUNTY PLANNING DEPARTMENT shall be entitled to use the premises as provided herein and in compliance with the terms hereof without any compensation being paid to City.
5. RENEGOTIATION: The parties are free to negotiate amendments to this agreement at any time.
6. RECORD KEEPING AND PERFORMANCE DATA: Each party shall keep and

maintain proper records and documentation sufficient to substantiate its compliance with the terms of this agreement.

7. **COMPLIANCE WITH GOVERNING LAW:** Each party shall comply with all federal, state and local laws, rules and regulations in its pursuit hereof. No party in its performance of this MOU shall employ discriminatory practices on the basis of race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, marital status, sex, age, sexual orientation, ethnicity, status as a disabled veteran or veteran of the Vietnam era.
8. **CAPACITY OF CITY AND WASCO COUNTY PLANNING DEPARTMENT:** Each party is acting in an independent capacity. Nothing in this MOU and nothing in the course of dealings between the parties hereunder shall be deemed to create any fiduciary relationship, trust, partnership, joint venture, agency or employment relationship, jointly and severally. In addition and without limitation, each party shall be solely responsible for all matters relating to payment of its employees, including, but not limited to, compliance with applicable social security withholding and all other regulations governing such matters.
9. **INDEMNIFICATION AND INSURANCE:** To the furthest extent allowed by law, including, but not limited to, the Oregon Tort Claims Act, WASCO COUNTY PLANNING DEPARTMENT shall indemnify, hold harmless and defend City and each of its officers, officials, employees, agents and volunteers from any and all loss, liability, fines, penalties, forfeitures, costs and damages (whether in contract, tort or strict liability, including but not limited to personal injury, death at any time and property damage) incurred by City, WASCO COUNTY PLANNING DEPARTMENT or any other person, and from any and all claims, demands and actions in law or equity (including attorney's fees and litigation expenses), arising or alleged to have arisen directly or indirectly out of performance of this MOU. WASCO COUNTY PLANNING DEPARTMENT's obligations under the preceding sentence shall not apply to any loss, liability, fines, penalties, forfeitures, costs or damages caused by the negligence or by the willful misconduct of City or any of its officers, officials, employees, agents or volunteers. If WASCO COUNTY PLANNING DEPARTMENT should subcontract all or any portion of the services to be performed under this MOU, WASCO COUNTY PLANNING DEPARTMENT shall require each subcontractor to indemnify, hold harmless and defend City and each of its officers, officials, employees, agents and volunteers in accordance with the terms of this paragraph. This paragraph shall survive termination or expiration of this MOU. Throughout the life of this MOU, WASCO COUNTY PLANNING DEPARTMENT shall pay for and maintain in full force and effect all policies of insurance required hereunder. The following policies of insurance are required:
  - a. **COMMERCIAL GENERAL LIABILITY** insurance which shall include insurance

for "bodily injury", "property damage" and contractual liability (including, without limitation, indemnity obligations under the Agreement) with limits of liability of not less than \$1,000,000 per occurrence and \$1,000,000 general aggregate for bodily injury and property damage.

- b. WORKERS' COMPENSATION insurance as required by law.
  - c. WASCO COUNTY PLANNING DEPARTMENT shall be responsible for payment of any deductibles contained in any insurance policies required hereunder.
  - d. In the event any policies are due to expire during the term of this Agreement, WASCO COUNTY PLANNING DEPARTMENT shall provide a new certificate evidencing renewal of such policy not less than 15 calendar days prior to the expiration date of the expiring policy(ies). Upon issuance by the insurer, broker, or agent of a notice of cancellation in coverage, WASCO COUNTY PLANNING DEPARTMENT shall file with City a new certificate and all applicable endorsements for such policy(ies).
  - e. If at any time during the life of the MOU or any extension, WASCO COUNTY PLANNING DEPARTMENT fails to maintain the required insurance in full force and effect, all work under this MOU shall be discontinued immediately until notice is received by City that the required insurance has been restored to full force and effect and that the premiums therefore have been paid for a period satisfactory to City. Any failure to maintain the required insurance shall be sufficient cause for City to terminate this MOU.
  - f. If WASCO COUNTY PLANNING DEPARTMENT should subcontract all or any portion of the services to be performed under this Agreement, WASCO COUNTY PLANNING DEPARTMENT shall require each subcontractor to provide insurance protection in favor of City, its officers, officials, employees, agents and volunteers in accordance with the terms of each of the preceding paragraphs, except that the subcontractors' certificates and endorsements shall be on file with WASCO COUNTY PLANNING DEPARTMENT and City prior to the commencement of any work by the subcontractor.
10. ATTORNEYS FEES: If a party is required to commence any proceeding or legal action to enforce or interpret any term, covenant or condition of this MOU, the prevailing party in such proceeding or action shall be entitled to recover from the other party its/their reasonable attorneys fees and legal expenses.
11. PRECEDENCE OF DOCUMENTS: In the event of any conflict between the body of this MOU and any exhibit/attachment hereto, the terms and conditions of the body of this

**Page 5 of 7 — MEMORANDUM OF UNDERSTANDING REGARDING LICENSED (NO CHARGE) USE OF FACILITY AT MAUPIN CIVIC CENTER BY WASCO COUNTY PLANNING DEPARTMENT – WASCO COUNTY, OREGON PLANNING PERSONNEL**

MOU shall control and take precedence over terms and conditions expressed within the exhibit/attachment. Furthermore, any terms or conditions contained within any exhibit/attachment hereto which purport to modify the allocation of responsibility or liability between the parties, provided for within the body of this MOU, shall be null and void.

12. NOTICES: Any notice required or intended to be given to a party under the terms of this MOU shall be in writing and shall be deemed to be duly given if delivered personally or deposited into the United States mail, return receipt requested, with postage prepaid, addressed to the party at that party's last known address.
13. BINDING EFFECT AND ASSIGNMENT: Once this MOU is signed by all the parties, it shall be binding upon, and shall inure to the benefit of, the parties, and each party's respective heirs, successors, assigns, transferees, agents, servants, employees and representatives, provided however that WASCO COUNTY PLANNING DEPARTMENT shall not assign this lease to any other entity without City's prior written consent. Consent to one assignment shall not be a waiver of the right to withhold consent to other assignments.
14. WAIVER: The waiver by any party of a breach by the other of any provision of this MOU shall not constitute a continuing waiver or a waiver of any subsequent breach of either the same or a different provision of this MOU. No provisions of this MOU may be waived unless in writing and approved by and signed by all parties to this MOU. Waiver of any one provision herein shall not be deemed to be a waiver of any other provision herein.
15. GOVERNING LAW AND VENUE: This MOU shall be governed by, and construed and enforced in accordance with, the laws of the State of Oregon. Venue for purposes of the filing of any action regarding the enforcement or interpretation of this MOU and any rights and duties hereunder shall be Wasco County, Oregon.
16. HEADINGS: The section headings in this MOU are for convenience and reference only and shall not be construed or held in any way to explain, modify or add to the interpretation or meaning of the provisions of this MOU.
17. SEVERABILITY: The provisions of this MOU are severable. The invalidity or unenforceability of any one provision in this MOU shall not affect the other provisions.
18. INTERPRETATION: The parties acknowledge that this MOU in its final form is the result of the combined efforts of the parties and that, should any provision of this MOU be found to be ambiguous in any way, such ambiguity shall not be resolved by construing this MOU in favor or against any party, but rather by construing the terms in accordance with their generally accepted meaning.

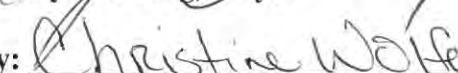

19. ENTIRE MOU: It is mutually understood and agreed that the foregoing constitutes the entire MOU between the parties. Any modifications or amendments to this MOU must be in writing signed by an authorized agent of each party.

IN WITNESS THEREOF, the parties have caused their authorized agents to execute this MOU:

## MEMORANDUM

**SUBJECT: Wasco County Owned Land Sale**

---

**TO: BOARD OF COUNTY COMMISSIONERS**

---

**FROM: JILL AMERY**

---

**DATE: 3/1/2022**

### **BACKGROUND INFORMATION:**

The Department of Assessment & Tax is proposing the sale of three tax-foreclosed properties at auction on May 24, 2022. The list of properties is attached for review. Additional descriptions of the properties are as follows:

**Account #17279**, located at 348 Little Lake Rd, Maupin, OR. It is a .12 acre bare lot. The property is located in Maupin within the Rivercrest Subdivision.

**Account #17280**, located at 417 Little Lake Rd, Maupin, OR. It is .12 acre bare lot. The property is located in Maupin within the Rivercrest Subdivision.

**Account #7311**, located at 6615 Reservoir Rd, The Dalles OR is a 0.29 acre parcel located off of Mill Creek Road at Reservoir Road in a rural setting with the sounds of the creek. The property has a manufactured structure on it that is a teardown.

## PUBLIC SALE OF TAX FORECLOSED REAL PROPERTY

Notice is hereby given that Wasco County intends to sell the tax foreclosed properties identified below through public sale on Tuesday, May 24, 2022, pursuant to an Order of the Board of Commissioners for Wasco County, Oregon, made and entered on March 16, 2022. The auction is to occur outside at 511 Washington Street, at or near the Courthouse parking lot area.

All property will be sold **AS IS, without warranty as to title, value, zoning, suitability for any purpose, environmental condition, wetland designation, easements, or any other condition and will be conveyed by quitclaim deed.** Further information on this sale can be found on the website: [http://www.co.wasco.or.us/departments/assessment\\_and\\_taxation/index.php](http://www.co.wasco.or.us/departments/assessment_and_taxation/index.php) or by calling (541) 506-2510.

### Property ID & Tax Lot

*Pioneering pathways to prosperity.*

### Overview

Wasco County Information Systems is reviewing the existing multi-function printer fleet (large copier / scanner / faxing) machines that provide core printing, copying, and faxing services to departments. Each of these large machines work off an equipment lease that lasts 5 years. Within this lease, maintenance, customer support, and supplies are provided by the vendor. Historically, services have been provided by Ricoh; however, technical issues, customer support concerns, print costs, and machine capabilities have caused us to take a closer look at a competing vendor, SolutionsYes.

Additionally, as leases expire and departments are looking to upgrade their primary copy machines, requests for color and other functionalities are becoming more prevalent. Several departments have been using the copiers from SolutionsYes for a couple years for testing purposes, and based on discussions, IS has had with end users, more prefer to use the SolutionsYes machines versus the Ricoh's. Additionally, WC IS has received fewer complaints where the SolutionsYes machines have been installed. The SolutionsYes customer representative has also regularly stopped by the office to ensure all machines are operating as expected; whereas, limited customer service has been experienced by Ricoh and in some cases support has not resolved issues.

### Costs

Each vendor's machines cost very similarly in terms of hardware and capabilities. Pricing for this project has largely focused on copy costs. The costs for both companies are shown below:

- **Ricoh** (uses a flat per copy cost for color and black & white)
  - Black & White, Per Copy, \$0.005
  - Color, Per Copy, \$0.0275
- **SolutionsYes** (uses flat cost for black & white and a scale for color copy costs)
  - Black & White, Per Copy, \$0.0045
  - Spot Color, Per Copy, \$0.025
  - Business Color, Per Copy, \$0.035
  - Full Color, Per Copy, \$0.045

Ricoh uses flat rates, which means if a color print job is performed, each copy will cost one price, no matter how much color appears on the page. SolutionsYes uses a scaled approach to color where partial color prints are cheaper to perform than that of a page with more color. Essentially, this means printing letterhead with a color logo on Ricoh would cost 2.75 cents per page, while SolutionsYes may be as little as 2.5 cents per page (this adds up when printing thousands of copies monthly).

## INFORMATION SERVICES

511 Washington St., Ste. 101 • The Dalles, OR 97058  
p: [541] 506-2550 • f: [541] 506-2551 • [www.co.wasco.or.us](http://www.co.wasco.or.us)

*Pioneering pathways to prosperity.*

Analysis shows costs are very comparable between the two vendors with no differences between hardware and negligible differences between copy costs. SolutionsYes has the potential to be cheaper or slightly more expensive, depending on usage (i.e., more B&W or more Color). IS was able to negotiate down average hardware costs between vendors to range between \$105 and \$145 based on machine functionality between departments. SolutionsYes and Ricoh matched each other's prices at around ~\$2100 monthly for all machines (~\$25,200 annually). Exhibit 1 provides a use case example of copy costs for a single department in a given month. The 6000 average monthly volume is a real volume experienced by a county department.

### Conclusion

In Summary, IS is looking to move forward in signing a 5-year lease agreement with SolutionsYes to upgrade our existing 16 multi-function printer fleet based on the following:

- Potential cost savings as outlined in the use case Exhibit
- End user feedback between Ricoh and SolutionsYes machines
- Reduction of technical issues experienced by the IS department

All costs are currently budgeted in the IS, Equipment - Copiers budget. This work represents a potentially small savings in total costs between hardware and copy jobs and is more about a quality-of-life improvement for departments in their printing capabilities and customer support from an IS and end user perspective.

# STATE AND LOCAL GOVERNMENT ADDENDUM

## AGREEMENT # 2782827

Addendum to Agreement # 2782827 and any future supplements/schedules thereto, between County of Wasco, as Customer ("Customer") and Solutions Yes, as Lessor. The words "you" and "your" refer to Customer. The words "we" and "us" refer to Lessor. In the event of any conflict between the terms and conditions of the Agreement and this Addendum, the terms and conditions of this Addendum shall control, and in the event of any conflict between the general provisions of this Addendum and any provision of this Addendum that expressly applies to you only if you are a political subdivision, county, city, or school district of specific state ("State-Specific Provision"), then the State Specific Provision shall control.

1. The parties wish to amend the above-referenced Agreement by adding the following language:

**REPRESENTATIONS AND WARRANTIES OF CUSTOMER:** You hereby represent and warrant to us that: (i) you have been duly authorized under the Constitution and laws of the applicable jurisdiction and by a resolution or other authority of your governing body to execute and deliver this Agreement and to carry out your obligations hereunder; (ii) all legal requirements have been met, and procedures have been followed, including public bidding, in order to ensure the enforceability of this Agreement; (iii) this Agreement is in compliance with all laws applicable to you, including any debt limitations or limitations on interest rates or finance charges; (iv) the Equipment will be used by you only for essential governmental or proprietary functions of you consistent with the scope of your authority, will not be used in a trade or business of any person or entity, by the federal government or for any personal, family or household use, and your need for the Equipment is not expected to diminish during the term of this Agreement; (v) you have funds available to pay Payments until the end of your current appropriation period, and you intend to request funds to make Payments in each appropriation period, from now until the end of the term of this Agreement; and (vi) your exact legal name is as set forth on page one of this Agreement.

**INITIAL TERM AND RENEWAL TERM(S):** The term of the Agreement consists of an initial term beginning on the date we pay Supplier and ending at the end of your fiscal year in which we pay Supplier, and a series of renewal terms, each co-extensive with your fiscal year. Except to the extent required by applicable law, if you do not exercise your right to terminate the Agreement under the Non-Appropriation or Renewal paragraph as of the end of any fiscal year, the Agreement will be deemed automatically renewed for the next succeeding renewal term.

An election by you to terminate the Agreement under the Non-Appropriation or Renewal paragraph is not a default.

Notwithstanding anything to the contrary set forth in the Agreement, if we cancel the Agreement following a default by you, we may require that you pay the unpaid balance of Payments under the Agreement through the end of your then-current fiscal year, but we may not require you to pay future Payments due beyond that fiscal year or the anticipated residual value of the Equipment. If we sell the Equipment following a default by you, you will not be responsible for a deficiency, except to the extent of our costs of repossession, moving, storage, repair and sale, and our attorneys' fees and costs.

**NON-APPROPRIATION OR RENEWAL:** If either sufficient funds are not appropriated to make Payments or any other amounts due under this Agreement or (to the extent required by applicable law) this Agreement is not renewed either automatically or by mutual ratification, this Agreement shall terminate and you shall not be obligated to make Payments under this Agreement beyond the then-current fiscal year for which funds have been appropriated. Upon such an event, you shall, no later than the end of the fiscal year for which Payments have been appropriated or the term of this Agreement has been renewed, deliver possession of the Equipment to us. If you fail to deliver possession of the Equipment to us, the termination shall nevertheless be effective but you shall be responsible, to the extent permitted by law and legally available funds, for the payment of damages in an amount equal to the portion of Payments thereafter coming due that is attributable to the number of days after the termination during which you fail to deliver possession and for any other loss suffered by us as a result of your failure to deliver possession as required. You shall notify us in writing within seven days after (i) your failure to appropriate funds sufficient for the payment of the Payments or (ii) to the extent required by applicable law, (a) this Agreement is not renewed or (b) this Agreement is renewed by you (in which event this Agreement shall be mutually ratified and renewed), provided that your failure to give any such notice under clause (i) or (ii) of this sentence shall not operate to extend this Agreement or result in any liability to you.

**SUPPLEMENTS; SEPARATE FINANCINGS:** To the extent applicable, in the event that the parties hereafter mutually agree to execute and deliver any supplement or schedule ("Supplement") under the above-referenced Agreement, such Supplement, as it incorporates the terms and conditions of the Agreement, shall be a separate financing distinct from the Agreement or other Supplements thereto. Without limiting the foregoing, upon the occurrence of an event of default or a non-appropriation event with respect to the Agreement or a Supplement (each, a separate "Contract"), as applicable,

we shall have the rights and remedies specified in the Agreement with respect to the Equipment financed and the Payments payable under such Contract, and we shall have no rights or remedies with respect to Equipment financed or Payments payable under any other Contract unless an event of default or non-appropriation event has also occurred under such other Contract.

2. The parties wish to amend the above-referenced Agreement by restating certain language as follows:

Any provision in the Agreement stating that you shall indemnify and hold us harmless is hereby amended and restated as follows: "You shall not be required to indemnify or hold us harmless against liabilities arising from this Agreement. However, as between you and us, and to the extent permitted by law and legally available funds, you are responsible for and shall bear the risk of loss for, shall pay directly, and shall defend against any and all claims, liabilities, proceedings, actions, expenses, damages or losses arising under or related to the Equipment, including, but not limited to, the possession, ownership, lease, use or operation thereof, except that you shall not bear the risk of loss of, nor pay for, any claims, liabilities, proceedings, actions, expenses, damages or losses that arise directly from events occurring after you have surrendered possession of the Equipment in accordance with the terms of this Agreement to us or that arise directly from our gross negligence or willful misconduct."

Any provision in the Agreement stating that the Agreement is governed by a particular state's laws and you consent to such jurisdiction and venue is hereby amended and restated as follows: "This Agreement will be governed by and construed in accordance with the laws of the state where you are located. You consent to jurisdiction and venue of any state or federal court in such state and waive the defense of inconvenient forum."

Any provision in the Agreement stating this Agreement supersedes any invoice and/or purchase order is hereby amended and restated as follows: "You agree that the terms and conditions contained in this Agreement, which, with the acceptance certification, is the entire agreement between you and us regarding the Equipment and which supersedes any purchase order, invoice, request for proposal, response or other related document."

Any provision in the Agreement stating that this Agreement shall automatically renew unless the Equipment is purchased, returned or a notice requirement is satisfied is hereby amended and restated as follows: "Unless the purchase option is \$1.00 or \$101.00, you agree to send us written notice at least 30 days before the end of the final renewal term that you want to purchase or return the Equipment, and you agree to so purchase or return the Equipment not later than the end of the final renewal term. If you fail to so purchase or return the Equipment at or before the end of the final renewal term, you shall be a holdover tenant with respect to this Agreement and the Equipment, and this Agreement shall renew on a month-to-month basis under the same terms hereof until the Equipment has been purchased or returned."

Any provision in the Agreement stating that we may assign this Agreement is hereby amended and restated as follows: "We may sell, assign, or transfer this Agreement without notice to or consent from you, and you waive any right you may have to such notice or consent."

Any provision in the Agreement stating that you grant us a security interest in the Equipment to secure all amounts owed to us under any agreement is hereby amended and restated as follows: "To the extent permitted by law, you grant us a security interest in the Equipment to secure all amounts you owe us under this Agreement and any supplements hereto. You authorize and ratify our filing of any financing statement(s) and the naming of us on any vehicle title(s) to show our interest."

Any provision in the Agreement stating that a default by you under any agreement with our affiliates or other lenders shall be an event of default under the Agreement is hereby amended and restated as follows: "You will be in default if: (i) you do not pay any Payment or other sum due to us under this Agreement when due or you fail to perform in accordance with the covenants, terms and conditions of this Agreement; (ii) you make or have made any false statement or misrepresentation to us; or (iii) you dissolve, liquidate, terminate your existence or are in bankruptcy."

Any provision in the Agreement stating that you shall pay our attorneys' fees is hereby amended and restated as follows: "In the event of any dispute or enforcement of rights

NOTE: CAPITALIZED TERMS IN THIS DOCUMENT ARE DEFINED AS IN THE AGREEMENT, UNLESS SPECIFICALLY STATED OTHERWISE.

under this Agreement or any related agreement, you agree to pay, to the extent permitted by law and to the extent of legally available funds, our reasonable attorneys' fees (including any incurred before or at trial, on appeal or in any other proceeding), actual court costs and any other collection costs, including any collection agency fee."

Any provision in the Agreement requiring you to pay amounts due under the Agreement upon the occurrence of a default, failure to appropriate funds or failure to renew the Agreement is hereby amended to limit such requirement to the extent permitted by law and legally available funds.

3. If your end-of-term option is the purchase of all Equipment for \$1.00 or \$101.00, the following applies: Unless otherwise required by law, upon your acceptance of the Equipment, title to the Equipment shall be in your name, subject to our interest under this Agreement; provided, however, that if you are a political subdivision of any of the States of Colorado, Georgia, Louisiana, Minnesota, Ohio or Oklahoma, and if your end-of-term option is the purchase of all Equipment for \$1.00 or \$101.00, title to the Equipment shall be in our name, subject to your interest under the Agreement.

4. With respect to any **"Financed Items,"** the following provisions shall be applicable to such Financed Items:

This Addendum concerns the granting to you of certain software and/or software license(s) ("Licensed Software"), the purchase by you of certain software components, including but not limited to, software maintenance and/or support ("Products") and/or the purchase by you of certain implementation, integration, training, technical consulting and/or professional services in connection with software ("Services") (collectively, the "Financed Items") from software licensor(s) and/or supplier(s) (collectively, the "Supplier"), all as further described in the agreement(s) between you and Supplier (collectively, the "Product Agreement"). For essential governmental purposes only, you have requested and we have agreed that instead of you paying the fees pursuant to the Product Agreement to Supplier for the Financed Items, we will satisfy your obligation to pay such fees to Supplier, and in consideration thereof, you shall repay the sums advanced by us to Supplier by promptly making certain installment payments to us, which are included in the Payments set forth in the Agreement.

To the extent permitted by law, you grant us a security interest in the license(s), including without limitation, all of your rights in the Licensed Software granted thereunder, the Products, all rights to payment under the Product Agreement, the Financed Items, and all proceeds of the foregoing to secure all amounts you owe us under this Agreement. You authorize and ratify our filing of any financing statement(s) to show our interest.

Ownership of any Licensed Software shall remain with Supplier thereof. All Financed Items shall be provided by a Supplier unrelated to us, and your rights with respect to such Financed Items shall be governed by the Product Agreement between you and Supplier, which shall not be affected by this Agreement. IN NO EVENT SHALL WE HAVE ANY OBLIGATION TO PROVIDE ANY FINANCED ITEMS, AND ANY FAILURE OF SUPPLIER TO PROVIDE ANY FINANCED ITEMS SHALL NOT EXCUSE YOUR OBLIGATIONS TO US IN ANY WAY. YOU HAVE SELECTED SUPPLIER AND THE FINANCED ITEMS BASED UPON YOUR OWN JUDGMENT. WE DO NOT TAKE RESPONSIBILITY FOR THE INSTALLATION OR PERFORMANCE OF THE FINANCED ITEMS. SUPPLIER IS NOT AN AGENT OF OURS AND WE ARE NOT AN AGENT OF SUPPLIER, AND NOTHING SUPPLIER STATES OR DOES CAN AFFECT YOUR OBLIGATIONS HEREUNDER. YOU WILL MAKE ALL PAYMENTS UNDER THIS AGREEMENT REGARDLESS OF ANY CLAIM OR COMPLAINT AGAINST ANY SUPPLIER, LICENSOR OR MANUFACTURER, AND ANY FAILURE OF A SERVICE PROVIDER TO PROVIDE SERVICES WILL NOT EXCUSE YOUR OBLIGATIONS TO US UNDER THIS AGREEMENT. WE MAKE NO WARRANTIES, EXPRESS OR IMPLIED, AS TO THE FINANCED ITEMS COVERED BY THE PRODUCT AGREEMENT AND TAKE ABSOLUTELY NO RESPONSIBILITY FOR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AS TO ANY PATENT, TRADEMARK OR COPYRIGHT INFRINGEMENT, CONDITION, QUALITY, ADEQUACY, TITLE, DATA ACCURACY, SYSTEM INTEGRATION, FUNCTION, DEFECTS OR ANY OTHER ISSUE IN REGARD TO THE FINANCED ITEMS. YOU HEREBY WAIVE ANY CLAIM (INCLUDING ANY CLAIM BASED ON STRICT LIABILITY OR ABSOLUTE LIABILITY IN TORT) THAT YOU MAY HAVE AGAINST US FOR ANY LOSS, DAMAGE (INCLUDING, WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF DATA OR ANY OTHER DAMAGES) OR EXPENSE CAUSED BY THE FINANCED ITEMS COVERED BY THE PRODUCT AGREEMENT OR A TERMINATION OF THE FINANCED ITEMS PURSUANT TO AN EVENT OF DEFAULT, EVEN IF WE HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE, LOSS, EXPENSE OR COST.

The following shall be additional events of default under the Agreement: (i) you fail to perform in accordance with the covenants, terms and conditions of the Product Agreement, or (ii) the Product Agreement is terminated, suspended, materially restricted or limited.

The following shall be additional remedies we have for your default under the Agreement: We shall have the right to: (a) cause the termination of the Financed Items and you irrevocably consent to such termination of the Financed Items by Supplier; and (b) require you to immediately stop using the Financed Items (regardless of whether you are

in default under the Product Agreement) and you shall, at our option, either deliver to us a certification executed by a duly authorized officer certifying that you have ceased use of the Financed Items or deliver the Financed Items to a location designated by us. In the event you are entitled to transfer the right to use the Financed Items to any third party, you hereby agree to transfer any such right to use the Financed Items to any third party selected by us and acknowledge that you shall have no right to fees payable by any third party in connection with such transfer. However, we shall not be required to mitigate our damages caused by a default by transferring any Financed Items to a third party.

5. If you are a political subdivision of the State of Arizona, the following applies: We understand that you may cancel the Agreement within three years after the start date of the Agreement if any person significantly involved in negotiating, drafting, securing or obtaining the Agreement for or on your behalf becomes, during the term of the Agreement, our employee or agent or becomes, during the term of the Agreement, a consultant to us with respect to the subject matter of the Agreement.

6. If you are a school district in the State of California and your end-of-term option is the purchase of all Equipment for \$1.00 or \$101.00, the following applies: You will be deemed to have acquired title to the Equipment from the Supplier on the date we pay for it, and you hereby sell, transfer and convey the Equipment to us on that date. You represent to us that the resolution of your governing body authorizing the execution and delivery of the Agreement contained a finding that the Equipment is a major item of equipment or data processing equipment and that the sale and leaseback of the Equipment was the most economical means of providing the Equipment to you.

7. If you are a political subdivision of the State of Florida, the following applies: We agree that there is no intention to create under the Agreement a right in us to dispossess you involuntarily of your interests in or the right of use of the Equipment. We hereby irrevocably waive any right to specific performance of your covenant to return possession of the Equipment to us if you default or exercise your right not to appropriate funds to make Payments. We acknowledge that Payments may not be payable from ad valorem taxes, and in no event may we compel the use of ad valorem taxing power for you to make Payments.

If the end-of-term option for the Agreement is the purchase of all Equipment for \$1.00 or \$101.00, you agree that you will give all notices and file all reports with the State Division of Finance as may be required in connection with the Agreement by Florida Statutes Annotated Section 218.38 and the rules adopted thereunder.

8. If you are a county of the State of Florida and your end-of term option is the purchase of all Equipment for \$1.00 or \$101.00, the following applies: If the term of the Agreement exceeds five (5) years, you represent and covenant to us that Payments will be paid from sources other than ad valorem taxes, and that the Agreement has been approved by our Board of County Commissioners.

9. If you are a political subdivision in the State of Georgia, the following applies: You represent to us that your acquisition or lease (or other financing) of the Equipment has not been the subject of a referendum or a proposed issuance of bonded debt which failed to receive the approval of your voters within the four calendar years immediately preceding the start date of the Agreement.

10. If you are a school district in the State of Georgia, the following applies: The term of the Agreement will consist of an original term, which will commence on the date we pay the Supplier and will continue through the end of the then-current calendar year, and a series of renewal terms, each having a duration of one calendar year. You will have the right to terminate the Agreement pursuant to the Non-Appropriation or Renewal paragraph at the end of each calendar year, and at the end of each fiscal year, if sufficient funds are not appropriated for such fiscal year or calendar year to make Payments. If you do not exercise your right to terminate this Agreement pursuant to the Non-Appropriation or Renewal paragraph at the end of any calendar year or fiscal year, the Agreement will be deemed to have been automatically renewed for the next calendar year or fiscal year, as applicable.

11. If you are a political subdivision of the State of Idaho, the following applies: If you are required under the Agreement to make any payments to us (other than a Payment) during any fiscal year during the term of the Agreement in the event of (a) a late payment charge for Payments, (b) an advance by us which you are required to repay, (c) an indemnity payment you owe to us, or (d) any other additional payment obligation you owe to us under the Agreement (collectively, the "Additional Payments"), the Additional Payments shall be payable solely from legally appropriated funds available for such fiscal year ("Available Funds"). To the extent Available Funds are not available for such fiscal year for payment of the Additional Payments, then the Additional Payments shall be subject to appropriation for the following fiscal year, or the fiscal year following the final fiscal year of the term of the Agreement, if the Additional Payment was incurred in the final fiscal year of the term of this Agreement. Failure to so appropriate the Additional Payments for the following fiscal year in each such case shall be a non-appropriation described in the Non-Appropriation or Renewal paragraph of the Agreement, providing the remedies to us for such an event in said paragraph. You will not be entitled to prepay the Agreement or to exercise your option to purchase the

NOTE: CAPITALIZED TERMS IN THIS DOCUMENT ARE DEFINED AS IN THE AGREEMENT, UNLESS SPECIFICALLY STATED OTHERWISE.

Equipment at the end of the term of the Agreement so long as any Additional Payments are outstanding and unpaid.

12. If you are a political subdivision of the State of Kansas, the following applies: We agree that you are obligated only to pay Payments under the Agreement as may lawfully be made from funds budgeted and appropriated for that purpose during the then-current fiscal year, or funds made available from any lawfully operated revenue producing source. If you are a school district, you represent and warrant to us that your Board of Education, by resolution approved by a majority of members of the Board of Education, has elected to omit the mandatory contract provisions prescribed by the Kansas Department of Administration in form DA-146a, as amended, from the Agreement, and such provisions are hereby so omitted; provided, however, that this election does not authorize the omission from the Agreement of the provisions of Kansas Statutes Annotated ("K.S.A.") § 72-1146 (related to indemnification and hold harmless provisions) or § 72-1147 (applicable law shall be Kansas law and applicable courts shall be Kansas courts), as amended. To the extent that the terms of the Agreement is in conflict with the terms of K.S.A. § 72-1146 or K.S.A. § 72-1147, the terms of K.S.A. § 72-1146 and K.S.A. § 72-1147 shall prevail.

13. If you are a political subdivision of the State of Kentucky and your end-of-term option is the purchase of all Equipment for \$1.00 or \$101.00, the following applies: You represent to us that you have in connection with the Agreement given all notices to and obtained all consents from the state local debt officer (or in the case of a school district, the chief state school officer) required by applicable law.

14. If you are a school district of the State of Missouri and your end-of-term option is the purchase of all Equipment for \$1.00 or \$101.00, the following applies: You represent to us that Payments under the Agreement will be paid from the capital outlay fund, and that sufficient funds necessary to make Payments required under the Agreement have been appropriated to the capital outlay fund for the fiscal year that includes the commencement date of the Agreement.

15. If you are a political subdivision of the State of Nevada, the following applies: You represent to us that, to the extent required by applicable law (a) the Agreement has been approved by the Executive Director of the Nevada Tax Commission, (b) the Agreement was approved by resolution of your governing body, and such resolution was approved by two-thirds of the members of such governing body, and (c) the resolution approving the Agreement was in form that complies with Nevada Revised Statutes Section 350.087, including the required findings of fact, and was published in accordance with the requirements of Section 350.087. To the extent required by applicable law, you agree to update your plan for capital improvements in accordance with the requirements of Nevada Revised Statutes Section 350.091.

16. If you are a school district of the State of New Jersey, the following applies: You represent to us that (a) you have complied with all rules and regulations of the New Jersey State Board of Education applicable to the leasing of the Financed Items under the Agreement, (b) you have complied with and will continue to comply with all rules and regulations related to New Jersey Statute 18A:18A-4.6, (c) you are not entering into the Agreement to finance maintenance, guarantees, or verification of guarantees of energy conservation measures, and (d) you will not except out the Agreement from any budget or tax levy limitation otherwise provided by law.

17. If you are a political subdivision of the State of New York, the following applies: The Agreement shall be deemed executory only to the extent of monies

appropriated and available for the purpose of the Agreement, and no liability on account hereof shall be incurred by you beyond the amount of such monies. The Agreement is not your general obligation. Neither your full faith and credit nor your taxing power are pledged to the payment of any amount due or to become due under the Agreement. It is understood that neither the Agreement nor any representation by any public employee or officer created any legal or moral obligation to appropriate or make monies available for the purposes of the Agreement.

18. If you are a political subdivision of the State of Oklahoma, the following applies: The Agreement will terminate at the end of each fiscal year unless you and we ratify the renewal thereof, and any such termination will be treated as a non-appropriation under the Non-Appropriation or Renewal paragraph of the Agreement.

19. If you are a political subdivision of the Commonwealth of Pennsylvania, the following applies: You represent to us that you have complied with the Pennsylvania Local Government Unit Debt Act, Pa. Cons. Stat. tit. 53, Sections 8001 to 8049 (including filing of debt statement and advertisement of proposed financing) in connection with the Agreement.

20. If you are a political subdivision of the State of South Dakota, the following applies: You represent to us that the Agreement has been approved by the requisite number of members of your governing body. If you are a school district, you represent and covenant to us that all Payments under the Agreement will be paid from your capital outlay fund and that you have not received any petitions from your voters requesting voter approval of the Agreement, and the time for filing such petitions has expired.

21. If you are a school district in the State of West Virginia, the following applies: Any action, suit or proceeding arising out of or relating to the Agreement shall be tried in the West Virginia Court of Claims, and we hereby consent to the jurisdiction and venue in such court. You will have no obligation to pay any taxes associated with the use, ownership or acquisition of the Equipment unless the use, ownership or acquisition of the Equipment is determined by final non-appealable judicial order to be subject to taxation, in which event you shall, to the extent permitted by applicable law, pay such taxes. If you receive notice from any taxing authority alleging that the Equipment is subject to property taxes, you will (a) give prompt written notice to us, (b) contest such allegations by proper proceedings, and (c) to the extent permitted by applicable law, and without prejudice to the position that the Equipment should be exempt from all property taxes, establish reserves for the payment of such taxes as required by general accepted accounting principles. We understand that you do not waive the benefit of any statute of limitations governing the time in which we may bring suit against you under the Agreement. You will not be obligated to pay any attorneys' fees incurred by us in connection with any suit, action, proceeding or other exercise of remedies under the Agreement absent a final, non-appealable order of a court of competent jurisdiction awarding attorneys' fees to us. We agree not to repossess the Equipment following a default or non-appropriation under the Agreement without giving seven (7) days prior written notice to you. Following the repossession or return of the Equipment as a result of a default or non-appropriation, you will have the right to acquire or lease similar property without restriction. We understand that the Agreement is a public record under the West Virginia Freedom of Information Act.

By signing this Addendum, Customer acknowledges the applicable changes noted above are incorporated by reference into the Agreement. In all other respects, the terms and conditions of the Agreement remain in full force and effect and remain binding on Customer. Customer has caused this Addendum to be executed by its duly-authorized officer as of the date below.

## Terms & Conditions

**EQUIPMENT SUPPORT AGREEMENT ("ESA"):** Solutions YES, LLC agrees to perform maintenance and make inspections, adjustments and repairs, and replace defective parts without additional charge to Customer, provided such calls are made during normal business hours. Solutions YES, LLC will furnish supplies, to be delivered at acceptable intervals and quantities in accordance with manufacturer's suggested yields. This ESA does not include paper, labels, staples, or transparencies. Solutions YES, LLC agrees to train customer in the use of the equipment at reasonable times. Title to all supplies furnished in connection with the ESA, including consumable parts such as drums, remains in Solutions YES, LLC until said supplies are consumed to the extent that they may not be further utilized in the copy making process. Toner consumption shall be within 10% of the manufacturer's suggested yields. A charge for toner consumption exceeding 10% of manufacturer's suggested yields will be charged at current retail price. In the event of customer default or cancellation, supplies and consumable parts shall be returned to Solutions YES, LLC on demand. Beyond the initial set-up and installation, any network or connectivity related service call, i.e. unable to print/scan or requests for additional desktops set up to print or scan, are considered chargeable calls at the current Solutions YES, LLC networking labor rates, unless it is determined to be a hardware related issue.

**EXCESSIVE DAMAGE:** Damage to the equipment or its parts arising out of misuse, abuse, negligence or causes beyond the control of Solutions YES, LLC are not covered. Solutions YES, LLC may terminate this agreement in the event the equipment is modified, damaged, altered or serviced by personnel other than those employed by Solutions YES, LLC, or if parts, accessories, components or supplies not authorized by Solutions YES, LLC are fitted to or used in the equipment.

**EXCESS COPIES:** Under the "ESA", the "Base Charge" is calculated on anticipated customer usage as stated in "Image Allowance" on the face of the Equipment Support Agreement. Image allowance copies are accumulated from the initial meter read. Should the allowance be exceeded prior to the expiration of any applicable billing cycle, customer agrees to pay the current excess copy charge for each copy in excess of the stated allowance. Invoices for excess copies will be tendered according to the "Overage Billing Cycle" and/or at the end of the initial term and shall be due and payable within 15 days. For agreements billed annually, upon exceeding the image allowance, customer may request that a new agreement be executed with the initial date of the term to coincide with the date that original image allowance is exceeded. Customer's option in this regard shall be void if all previously tendered invoices have not been paid.

**BUSINESS HOURS FOR SERVICE:** Support services shall be provided hereunder only during Solutions YES, LLC's normal business hours, which shall consist of 8:00a.m. to 5:00p.m., Monday through Friday, exclusive of Solutions YES' holidays and are subject to change by Solution YES. At customer's request, Solutions YES, LLC may render support service outside of normal business hours, subject to availability of personnel, at established Solutions YES, LLC rates then in effect.

**AVAILABILITY OF SUPPLIES:** Customer support engineers do not carry or deliver consumable supplies (toner, etc.). It is customer's responsibility to have the necessary supplies available for customer support engineer's use.

**RECONDITIONING:** When a shop reconditioning is necessary, or the manufacturer's life expectancy of the equipment has been exceeded, and normal repairs and parts replacement cannot keep a unit in satisfactory operating condition, Solutions YES, LLC may refuse to renew this agreement, and/or refuse to continue providing support under this agreement, furnishing support only on a Per Call basis at Solutions YES, LLC's current rates.

**CANCELLATION OF SERVICE:** Cancellation at the conclusion of the initial term or any renewal term may be accomplished by either party by providing written notice of such cancellation no later than thirty (30) days prior to the expiration of the term then in effect. In addition, Solutions YES, LLC may cancel this agreement, in whole or in part, at any time upon seven (7) days written notice, or without notice in the thirty (30) days prior to renewal date. If customer at any time is in breach of any term or condition contained herein, Solutions YES, LLC may apply any refund due to the satisfaction of any past due invoices for any other products or services. Should this agreement be cancelled by customer, Solutions YES, LLC will not issue any refund.

**LATE CHARGES; INTEREST; SUSPENSION OF SERVICE:** Customer agrees to pay all invoices tendered for services performed and/or parts installed on equipment when services are performed, according to invoice payment terms. If any payment due to Solutions YES, LLC hereunder is more than 10 days past due, customer agrees to pay a late charge equal to ten (10%), to cover Solutions YES, LLC's administrative costs occasioned by said late payment. Customer agrees that amounts not timely paid shall bear interest at the rate of 1.5% monthly (18% per annum) or at the maximum rate allowed by law, whichever is less. Without waiver of any other rights hereunder, Solutions YES, LLC shall have the right to discontinue service in the event customer becomes delinquent in payment.

**DAMAGES:** In the event Customer is in default of an obligation under this agreement, and remains in default for seven (7) days after notice thereof, Solutions YES, LLC may cancel this agreement and collect damages according to the following formula. In such an event, Customer promises to pay Solutions YES, LLC the following amounts as liquidated damages (and not as a penalty): (a) During the first six months of the initial term, six times the average monthly charge; (b) At any time thereafter, amount owed at three times the monthly charge.

**RENEWAL:** Unless otherwise terminated as set forth herein, this agreement shall be automatically renewed upon expiration of the initial term for successive renewal terms, at Solutions YES, LLC maintenance rates in effect at the time of application renewal. Annual increases may be incurred during the term of the contract.

**INSTALLATION:** Certain equipment must be installed according to specific requirements in terms of space, electric, and environmental conditions. Installation requirements are defined in the equipment operator manual. Customer shall ensure that the equipment is placed in an area that conforms to these requirements.

**DISCLAIMER:** Solutions YES, LLC expressly disclaims any duty as insurer of the equipment and customer shall pay for all costs of repair and parts or replacement of the equipment made necessary by, but not limited to, loss or damage through accident, abuse, misuse, theft, fire, water, casualty, natural forces or any other negligent act of customer or customer's agent and/or service performed by non-Solutions YES, LLC personnel. Solutions YES, LLC will not assume any liability for any conditions arising from electrical circuitry external to the equipment and equipment line cord, nor is any external electrical work covered under this agreement.

**CUSTOMER CHANGES:** Any Customer changes, alterations, or attachments may require a change in the charges set forth herein. Solutions YES, LLC also reserves the right to terminate this agreement in the event it has been determined such changes, alterations, or attachments make it impractical for Solutions YES, LLC to continue to service the equipment.

**ATTORNEY'S FEES; COSTS:** In the event customer defaults under this Equipment Support Agreement, or if any other dispute arises hereunder requiring Solutions YES, LLC to refer said matter to an attorney and/or to initiate, or defend, any court action in any way related to this agreement, customer agrees to pay Solutions YES, LLC reasonable attorney's fees and all costs resulting from such actions.

**WAIVER OF JURY TRIAL:** Customer hereby waives trial by jury as to any and all issues out of, or in any way related to this ESA.

**NO WAIVER:** Customer acknowledges and agrees that any delay or failure to enforce the rights hereunder by Solutions YES, LLC, does not constitute a waiver of such rights by Solutions YES, LLC or in any way prevent Solutions YES, LLC from enforcing such rights, or any other rights hereunder, at a later time.

**ENTIRE AGREEMENT:** This ESA constitutes the entire agreement between Customer and Solutions YES, LLC related to the service and maintenance of the equipment, and any and all prior negotiations, agreements (oral or written), or understandings are hereby superseded.

**NO MODIFICATIONS OF TERMS:** Customer expressly acknowledges and agrees that these terms and conditions may not be varied, modified, or changed except by written agreement executed by a corporate officer of Solutions YES, LLC. No sales or service personnel, including but not limited to managers or supervisors, has any authority to override this provision.

**NOTICE:** Any notice or other communication given or required in connection with this Equipment Support Agreement, shall be in writing, and shall be given by certified or registered mail, postage prepaid, return receipt requested. If sent to Solutions YES, LLC said notice shall be sent to Solutions YES, LLC, Attn: CFO, 8300 SW Hunziker St., Portland, OR 97223, or such other address Solutions YES, LLC may hereafter designate in writing. If to Customer, the notice shall be sent to Customer at the address specified in the reverse side hereof, or such address which may be specified, by customer, in writing to Solutions YES, LLC.

### Gorge Commission Funding Update

---

[MEMO](#)

---

March 16, 2022

Wasco County Board of Commissioners  
511 Washington St, Ste 302  
The Dalles, OR 97058

Dear Chair Schwartz and Commissioners Hege and Kramer,

Thank you for the invitation to provide an update from the Gorge Commission. I am joined today by Gorge Commission Chair, Robin Grimwade. Chair Grimwade is the Clark County appointee to the Gorge Commission after serving on the Clark County Planning Commission for several years. Joanna Kaiserman, Senior Land Use Planner, is also joining us since she has been the lead for working with Wasco County on the NSA land use ordinance revisions. I have two updates for you today:

**Gorge Commission approval of the NSA Land Use Ordinance:** On March 8, 2022, the Gorge Commission held a hearing to review the revised ordinance for Wasco County incorporating the revisions needed to be consistent with the new Management Plan. Joanna prepared the staff report for the Commission that summarized her analysis and consistency determination. The Gorge Commission approved it unanimously. The Gorge Commission values Wasco County as a full partner and participant in the National Scenic Area and believes your implementation of your National Scenic Area ordinance remains the most efficient and effective manner of land use planning in the NSA portion of Wasco County for your staff and landowners. We recognize and appreciate the amount of effort and time it took for your Planning Director, Kelly Howsley-Glover, former Planning Director, Angie Brewer, and the small planning staff, to complete the revised ordinance and meet the 270-day deadline established by the National Scenic Area Act. We thank the county planning staff for their coordination and thorough work on this ordinance update. We have submitted the ordinance to the Secretary of Agriculture for concurrence. The Secretary has 90 days to review and concur. The concurrence letter should be issued no later than mid-June.

**Climate Change Action Plan:** The revised Management Plan included a new Climate Change chapter and specifically directed staff to prepare a Climate Change Action Plan (CCAP) that outlines adaptation and mitigation strategies. For the last year, staff worked with a technical review committee representing agencies, tribes and other experts to prepare the first draft. At the March 8, 2022 meeting, the Gorge Commission reviewed and discussed the first draft and provided some additional input. The Gorge Commission received public comment from Deborah Ferrer, Wasco County resident, that the city of The Dalles and Wasco County have recently agreed to form a joint Climate Action Task Force and we look forward to learning more about progress made and if we

can be of assistance. The Commission will release the next draft CCAP by early April for a 60-day comment period. The Commission's lead staff, Jessica Olson, Senior Natural Resources Planner, will host four Open Houses with "Question and Answer" sessions in April and May to engage the public and gather more comments that will inform the final draft to be presented to the Commission in mid-summer 2022. This effort will be coordinated with the NSA counties, the two states, and the four Columbia River Treaty Tribes in partnership with the Forest Service in the National Scenic Area. In addition, our Vital Sign Indicators long-term monitoring initiative will be integrated into the CCAP.

The Gorge Commission appreciates the opportunity to provide this brief update and looks forward to your questions and comments.

Sincerely,

Krystyna U. Wolniakowski  
Executive Director

---

# Who is Mid-Columbia Community Action Council (MCCAC)?

---

MCCAC is the Community Action Agency serving Hood River, Wasco and Sherman Counties. We provide Housing, Shelter, Household Utility and Home Weatherization assistance to lower income and houseless community members. Our primary funding comes from state and federal sources.

# Mission

---

Our mission is to build a better future for our community through partnership and equity-centered programs that prevent and eliminate poverty and houselessness.

# Values

---

Equity, Compassion, Collaboration, Community, Respect

# Houselessness in Wasco County

---

## 2022 Point-in-Time Count: Wasco County

- 194 individuals experiencing houselessness (+82)
  - 138 Unsheltered (+43) ; 56 Sheltered (+39)
  - 54 self-identified as having a mental illness (+24)
  - 34 identified having a substance use disorder (+18)
  - 9 Veterans (+3)
  - 16 Native Community Members (+10)
  - 32 Latinx Community Members (+24)
  - 19 People of Color (+1)
  - 19 Children and Youth under the age of 24 (+1)

\*(+/-) change from 2020 PIT Count

# 2022 PIT Count Takeaways

---

- 74% increase in houselessness
- Significant increases in houselessness among Native and Latinx community members
  - Partnerships with culturally-specific organizations have increased our ability to identify those experiencing houselessness among specific demographics.
  - Nch’l Wana Housing and The Next Door assisted with the count
  - Counting done on the Native In-Lieu sites
- Large increases in those with behavioral health and substance use disorders
  - Impacts on chronic homelessness
- 70% increase in sheltered houseless individuals
  - Largely due to increase in shelter beds in the region
- We are getting better at conducting the count and collaborating among the agencies serving the community. Better coordination typically results in immediate increases in numbers and better data quality.

[MOTION LANGUAGE](#)

---

## Memorandum

**Date:** March 8, 2022  
**To:** Wasco County Board of County Commissioners  
**From:** Carrie Pipinich, EDC Staff  
**Re:** Wasco County Kramer Field Application

---

**Request:** Authorize Wasco County staff to apply to the Oregon State Park Department (OPRD)'s Local Government Grant Program for \$1 million to acquire property to support a new ball field complex and support providing up to \$470,000 in matching funds.

### **Background**

The County has asked for EDC staff support in drafting a grant application to Oregon Parks and Recreation Department's (OPRD) Local Government Grant Program as part of the process to develop a sufficiently large parcel needed for a new sports complex in The Dalles. EDC staff has been working closely with County administration to explore eligibility, gather necessary documentation, and start developing application materials. This grant application is likely one of a series of pieces that can support this vision.

There is still some diligence required in preparation for the grant, and staff is working to address these items in advance of the April 1, 2022 application deadline. The grant cycles occur on an annual basis. Staff request authorization from the BOCC for the County to submit an application to the OPRD program if the County Administrator is satisfied with the diligence.

**Proposed Project:** For this application, the County would be seeking funds to purchase an approximately seven-acre parcel from NORCOR to support development of the proposed new sports complex. The grant application package must include a letter from NORCOR indicating they are willing to sell the property as well. Appraised at \$1.47 million, the parcel would add additional acreage to the 35 acres that would be transferred through the Strategic Investment Program agreement with Design LLC. These two parcels together would make up the bulk of a proposed new site with one additional parcel being explored. This application does not determine the final uses and site plans for the overall project but only supports acquisition.

### **Considerations:**

- Due to program allocation being put on hold during the COVID-19 pandemic and higher than usual lottery fund generation, the funding available in this program is more than double its usual annual pool of resources at approximately \$14 million.
- Acquiring this parcel with these funds commits it to being utilized for park and recreation purposes for at least 25 years.
- Since the current Kramer Field complex received grant funding in the past, staff is continuing to do diligence as it relates to this acquisition about the process for fulfilling those grant requirements as part of the formal replacement for Kramer Field.

IN THE BOARD OF COMMISSIONERS OF THE STATE OF OREGON

IN AND FOR THE COUNTY OF WASCO

IN THE MATTER OF AUTHORIZING WASCO COUNTY TO APPLY FOR A LOCAL GOVERNMENT GRANT FROM THE OREGON PARKS AND RECREATION DEPARTMENT FOR ACQUISITION AND TO DELEGATE AUTHORITY TO THE COUNTY ADMINISTRATIVE OFFICER TO SIGN THE APPLICATION

**RESOLUTION #22-001**

NOW ON THIS DAY, the above-entitled matter having come on regularly for consideration, said day being one duly set in term for the transaction of public business and a majority of the Board of Commissioners being present; and

**WHEREAS**, the Oregon Parks and Recreation Department is accepting applications for the Local Government Grant Program; and

**WHEREAS**, Wasco County desires to participate in this grant program to the greatest extent possible as a means of providing needed park and recreation acquisitions, improvements and enhancements; and

**WHEREAS**, Board of County Commissioners has identified developing a new at sports complex as a high priority need in Wasco County; and

**WHEREAS**, acquisition of the proposed parcel is critical to the future development of a modern, accessible sports complex, and

**WHEREAS**, Wasco County has available local matching funds to fulfill its share of obligation related to this grant application should the grant funds be awarded; and

**WHEREAS**, Wasco County will provide adequate funding for on-going operations and maintenance of this park and recreation facility should the grant funds be awarded; and

**NOW, THEREFORE, BE IT RESOLVED BY THE WASCO COUNTY BOARD OF COMMISSIONERS AS FOLLOWS:**

Section 1: The Board of County Commissioners demonstrates its support for the submittal of a grant application to the Oregon Parks and Recreation Department for property acquisition to develop a new sports complex.

Section 2: This Resolution shall be effective following its adoption by the Board of Commissioners

DATED this 16<sup>TH</sup> day of March, 2022.

APPROVED AS TO FORM

Wasco County Board of Commissioners

Kristen Campbell, County Counsel

Kathleen B. Schwartz, Chair

Steven D. Kramer, Vice-Chair

## MOTION

**SUBJECT: State Parks & Recreation Grant Application**

---

I move to approve Resolution 22-001 authorizing Wasco County to apply for a local government grant from the Oregon Parks and Recreation Department for acquisition and to delegate authority to the County Administrative Officer to sign the application.

## AGENDA ITEM

### MCEDD – Plans

**Wasco County Economic Development Commission  
Report to the Wasco County Board of Commissioners**

---

March 2022

**2022-2027 EDC Strategic Action Plan Update**

Throughout 2021, the EDC dedicated time at each of its meetings to update its Strategic Action Plan to guide its focus for the coming five year period. Staff prepared materials for discussion at the June, September, and December meetings including a data review, strengths-weaknesses-opportunities-threats and assets analysis; updates to the EDC's mission and vision for economic development in Wasco County, and the goals and strategies to move toward that vision. The Committees then provided input into developing an action plan to support implementation in each area. Staff compiled this into a plan that was presented at the March 3, 2022 meeting of the EDC.

The plan as accepted by the EDC is attached for your reference and input.

The staff report below is developed based around the goal areas outlined in the Action Plan. The EDC decided to shift its committee structure to align work with its goal areas to support implementation of their action plans.

**Vibrant and Diverse Local Economy**

- Staff coordinated meetings with the Brownfield Coalition group as well as one with City of The Dalles staff and the consultant to discuss neighborhood planning type activities. The grant currently has nine sites working through the program.
- The Wasco County Innovation Strategy group (Port, CGCC, EDC/MCEDD, Business Oregon, Regional Solutions) are the partners coming together to work toward implementation of our initial phases of work after completing the Center on Rural Innovation (CORI) planning process. The group is focusing on mapping out our entrepreneurial ecosystem and conducting outreach to local businesses to better understand their experiences with it. This will help identify areas for focus and programming opportunities as we move forward. This group also worked with CORI to support CGCC's participation in their Good Jobs Challenge application for
- Staff has met with the SBDC and other MCEDD staff to discuss concepts for pub talks to be hosted in the coming year. Next steps will be to reach out to the local chambers and the Wasco County Innovation group to discuss opportunities for collaboration.
- Staff has been invited to participate in CORI's Rural Innovation Network's annual Summit in May to connect with and learn from other communities in the network. The Port and EDC staff will be attending.
- MCEDD has been working with chambers in the region to identify and profile businesses who have implemented successful resilience strategies during the pandemic. These are featured on MCEDD's website in the preparedness section ([mcedd.org/ready](https://mcedd.org/ready)) along with resources available to local businesses to plan for resilience.

**Robust Infrastructure: Broadband Committee**

- The Wasco County Broadband Action Team held its first meeting in January and it was well attended with engagement from broadband providers, utilities, schools, and community groups all engaged. The next meeting is scheduled for mid-March with the group planning for regular meetings every two months.

- Staff has been working with a sub-committee of the BAT to develop a survey instrument, interview guide, and outreach plan for the mapping and gap analysis that is being started. This will occur in conjunction with the statewide Faster Broadband Oregon speed test mapping push that is being coordinated with BATs, Economic Development Districts, and Link Oregon. The campaign will likely start in May. This work will be a big focus in the coming quarter.
- Q-Life and MCEDD are working to complete additional planning work for the Cascadia East Colocation facility. This will include architectural and engineering drawings and meeting with other colocation and interconnection facilities in Oregon to explore business models.

### **Robust Infrastructure: Water/Waste Water**

- Staff is meeting with the City of Dufur, the Port of The Dalles, and Business Oregon to discuss next steps with the City's needed water system investments on March 10<sup>th</sup>.
- Staff has worked to review upcoming resources through the infrastructure bill passed that may impact our local systems.

### **Community Capacity, Information Source, and Advocacy**

- Staff conducted some research for the City of Shaniko about potential resources for installing historic streetlights in their downtown core.
- Staff is working with Paul Lindberg of the Healthy Gorge Initiative, Lauren Kraemer of OSU Extension, and Chelsea Ruder from OHSU to explore collaborating to host a grant writing training this spring focused on non-profits and local governments. This compliments the infrastructure focused training from the fall with a look at broader grant writing strategies. The group has put out [a survey](#) to gather input from local partners on structure and format. We are tentatively planning for a May series of sessions for this effort.

### **General EDC Activities:**

EDC staff provided the following support services:

- Staff met with The Dalles Main Street staff to explore any opportunities for collaboration.
- Staff has been working with Wasco County to explore an application to the Oregon State Parks Local Government Grant Program related to property acquisition for the new potential ball fields.
- Staff met with Wasco Electric Co-Operative to discuss upcoming efforts with the Co-Op as well as opportunities for partnership as Q-Life seeks to expand broadband access.
- Staff presented to The Dalles Area Chamber's Government Affairs group about activities for MCEDD and the Wasco County Economic Development Commission.
- Staff drafted letters of support for the Dufur CTE program, Wy'East's Energy efficiency access work, and CGCC's participation in the Center on Rural Innovation's EDA Good Jobs Challenge application.
- Staff is exploring a request for grant applications from Business Oregon focused on developing plans for Rural Innovation Hubs.
- Staff supported the March EDC meeting. The main focus was on the workplans and review of the draft Strategic Action Plan. There was interest in shifting back to in person meetings starting in June and depending on current COVID-19 conditions. Staff is working to identify a potential location and incorporate a tour into the meeting times in June and September.

# ECONOMIC DEVELOPMENT COMMISSION OVERVIEW

The Wasco County Economic Development Commission is a County appointed Commission that works for an economically robust Wasco County. The EDC is a representative body made up of 11 Commissioners, each of whom represents a different constituency geographically and from key industries.

The EDC acts as the economic development arm of Wasco County. Its activities focus on job creation, supporting foundational infrastructure to create economic opportunity, and increasing capacity throughout the County. The EDC is directly responsible for the following activities:

1. **Information Source:** Keeping the Board of County Commissioners and partners apprised of economic development activity, opportunities, and needs throughout the County.
2. **Community Capacity Building:** Collaborating with, and providing technical assistance to, local entities to accomplish projects focused on the above outcomes and to bring further investment into Wasco County.
3. **Leadership:** Providing leadership on countywide economic and long-term development efforts.

To fulfill this role, the EDC meets quarterly with working groups focused on moving specific projects or topic areas coming together in the interim and staff supported actions.

# STRATEGY AND PROCESS

This plan is intended to guide the work done by the Wasco County Economic Development Commission in the coming five years. It provides an overview of the EDC's vision for Wasco County supported by the County's demographic and economic profiles and an assets-strengths-weaknesses-opportunities-and-threats analysis. The information provided builds on work done at the regional level and seeks to align the EDC's efforts with the regional strategy where relevant to leverage additional capacity. These foundations provided the framework for the specific goals and strategies developed as well as directed the formation of the EDC's action plan for the coming year.

In order to draft this economic development strategy and its accompanying action plan, the Economic Development Commission moved through a nine-month process started in June of 2021. At each EDC meeting a specific portion of the material for the plan was reviewed and input provided by the EDC Commissioners (detailed to the right). A committee was formed around each goal area to refine strategies and develop actions.

The full strategy and action plan was adopted by the EDC in March of 2022. It will provide a clear framework for the EDC for the coming five years with minor annual updates incorporated into the action plan to reflect current activities and any significant changes to the economic development landscape.

## PROCESS OVERVIEW

**JUNE 2021:** REVIEW EDC'S CURRENT ROLE, DEMOGRAPHIC AND ECONOMIC TRENDS, ASSET MAPPING, AND SWOT.

**SEPTEMBER 2021:** MISSION, VISION AND GOALS

**DECEMBER 2021:** COMMUNITY ENHANCEMENT PROJECT PRIORITIZATION, STRATEGY DEVELOPMENT, COMMITTEE FORMATION.

**JANUARY TO FEBRUARY 2022:** COMMITTEES, EDC LEADERSHIP, AND STAFF DEVELOPED ANNUAL ACTION PLANS BASED ON MISSION, VISION, AND STRATEGIES.

**MARCH 2022:** EDC ADOPTS DRAFT ECONOMIC DEVELOPMENT STRATEGIC ACTION PLAN

# DEMOGRAPHIC AND ECONOMIC TRENDS

Wasco County is one of Oregon's oldest counties, established in 1854 by the Oregon Territorial Legislature. The county seat is the City of The Dalles with other incorporated cities including Antelope, Dufur, Maupin, Mosier and Shaniko. The County is approximately 2,392 square miles with approximately 59% held in private ownership, 25% in Tribal lands, and the remaining in a variety of public ownerships with the largest being US Forest Service land. The County is bounded by the Columbia River to the North, the Deschutes to the East and the Mt Hood National Forest on the West.

The Dalles area holds the majority of the County's population with approximately 16,000 of the almost 26,670 residents in the County. Wasco County's population has grown at a rate of approximately 5% since 2010, whereas Oregon has grown 10% in the same period. This is almost double the 2.2% growth from 2010 to 2015, but not close to the significant growth rate in The Dalles. Wasco County's population has a smaller percentage of younger residents and a larger percentage of residents over 65 than Oregon as a whole or The Dalles. In addition to this shifting age distribution, Wasco County's Latinx population has grown significantly over the last few decades with its percentage increasing from 9.3% in 2000 to 19.2% in 2019. These shifts will impact required services, the types of businesses in demand, and workforce skills needed in the coming years.

Educational attainment can be an important indicator for workforce skills. For those over 25 in Wasco County, 19.6% of the population has a bachelor's degree or higher, compared to 32% nationally and 33.7% in Oregon. Median income increases and poverty rate decreases as educational attainment rises locally as well as nationally as education impacts the types of jobs available to residents.

Prior to COVID-19, median household income in Wasco County grew to \$53,105 in 2019 from \$43,422 in 2015. Approximately 12% of residents remained in poverty despite overall income growth. This is a significant decrease from the poverty rate in 2015 at 17%. Per capita, the income for 2019 was \$27,445, which is lower than Oregon as a whole (\$33,763). These shifting demographics could reflect a variety of factors. These could include job growth in the County, wealthier retirees moving into the area, or increases in housing costs pushing lower income residents into outlying communities.

The main driver of Wasco County's economy remains agricultural production. The County produced almost \$96 million in agricultural products sold, with most of this being in crop sales and 15% in livestock sales reported for the 2017 Census of Agriculture. The main products include a variety of types of wheat, sweet cherries, and forage. Wasco County remains a leader in production for both dryland wheat and sweet cherries.

Wasco County's non-farm economy is still recovering from the pandemic. From 2015-2020, Wasco County lost 3% jobs, most of which were in the leisure and hospitality, a sector that had experienced large gains in 2015. As of May 2021, Wasco County has regained 68% of the jobs lost at the onset of the pandemic, according to the Oregon Employment Department. Despite this, job gains have started to slow compared to the beginning of the year due to labor shortages, particularly for the in-person service jobs. The largest industries for the county continue to be education and health services, trade, transportation, and utilities, and local government employment. Total payroll in Wasco County for 2020 came to almost \$511 million from \$453 million in 2016. Only about 60% of the jobs in Wasco County are held by in-county workers, with more workers leaving

the county for employment in 2019 than both working and living within the County. Commuters head in many directions, with the largest concentrations to Portland and Hood River.

In addition to recovering jobs and income during the pandemic, the real estate market has seen the value of homes increase significantly in the past few years, which has led to housing shortages for middle to low-income workers and will have serious implications for the economy moving forward. Supply chain issues for commodities like lumber has also impacted housing prices and construction.

These indicators point toward a recovering economy, with some significant challenges around addressing income inequality, providing housing for the local workforce, and supporting a growing region.

# SWOT ANALYSIS

The EDC developed an assets-strengths-weaknesses-opportunities-threats analysis. This analysis provides an opportunity to think of the broader landscape impacting the EDC's work in economic development. It also allows for consideration of key partnerships to engage with in support of efforts that align with the EDC's vision for the community that might be outside of its mission.

## Mission

The EDC collaborates with and supports partners and local communities to cultivate sustainable economic and business development in Wasco County.

## Vision

Wasco County and its communities should be economically robust, livable, and continue to enhance strong rural character.

### Robust Infrastructure:

Support communities throughout Wasco County in efforts to provide adequate infrastructure to enhance community livability and economic opportunity.

### Community Capacity:

Work with local partners to provide meaningful technical assistance, bring in additional resources, and complete projects that enhance their community's capacity for appropriate economic development

### Information Source and Advocacy:

Ensure the Board of County Commissioners, partners, funders, and companies have up-to-date information on economic conditions, activities, and projects that support a resilient local economy in Wasco County.

# Goals

### Vibrant and Diverse Local Economy:

Develop and implement short- and long-term strategies that build and diversify the economy in Wasco County and its communities.

### Strong and Sustainable EDC:

Strengthen relationships with partners, diversify funding streams, and provide professional, effective services to communities and businesses in Wasco County.

# STRATEGIES

This plan below provides the EDC's roadmap for moving toward its vision of strong, livable communities with robust economies throughout Wasco County. It is organized by goal area. Strategies and actions will continue to evolve as progress is made or in reaction to changing conditions and resources.

## **GOAL: VIBRANT AND DIVERSE LOCAL ECONOMY. DEVELOP AND IMPLEMENT SHORT-AND LONG-TERM STRATEGIES THAT BUILD AND DIVERSIFY THE ECONOMY IN WASCO COUNTY AND ITS COMMUNITIES.**

### **Strategy: Create a strong, connected support system for businesses that can help community members start and grow companies.**

- Work with partners to ensure information about business resources, incentives, and financing is readily available to those looking to start or grow a business in Wasco County. Maintain up to date business development guides for interested communities around the County. Note: suggested update 2023.
- Support businesses in connecting with resources to site or grow their firms.
- Continue to serve as Wasco County's representative with the Brownfield Coalition grant to support reducing barriers to development in Wasco County.
- Engage with service providers, communities and local businesses to identify and address key business needs throughout Wasco County. Complete interviews with businesses in the County to better understand needs. (Grant Resource: Business Oregon Rural Opportunity Initiative)
- Work with partners (Chambers, Port, SBDC, MCEDD) to host Pub Talk type networking events and other programming identified through the interviews to create a strong community around entrepreneurship. (Grant Resource: Oregon Community Foundation Thriving Entrepreneurs Grant)

### **Strategy: Support development of key industry clusters in Wasco County that leverage strengths in the County and region.**

- Work with the Port, Community College, local chambers, regional industry associations, and other partners to identify and develop next steps from the Wasco County Innovation Strategy developed with Center on Rural Innovation. Ensure engagement with traditional as well as new sectors. (Grant Resource: Business Oregon Rural Opportunity Initiative)

**Strategy: Work with partners to support connecting workforce, education and training opportunities to employer identified skills.**

- Complete interviews with businesses in the County to better understand needs.
- Explore opportunities to support partners in hosting career or job fairs.

## **GOAL: ROBUST INFRASTRUCTURE. SUPPORT COMMUNITIES THROUGHOUT WASCO COUNTY IN EFFORTS TO PROVIDE ADEQUATE INFRASTRUCTURE TO ENHANCE COMMUNITY LIVABILITY AND ECONOMIC OPPORTUNITY.**

**Water/Wastewater Strategy: Work with communities and partners to address water and wastewater system constraints to community and economic development.**

- Continue to host training sessions like the Infrastructure Planning and Finance Workshop held in partnership with RCAC in 2021 that increase local capacity for infrastructure project development. Connect local systems to existing training opportunities.
- Host a mock one stop where local systems can familiarize themselves with the process.
- As capacity allows, provide technical assistance to water and wastewater systems in the county to increase access to funding and move planning and projects forward.
- Build an inventory of system conditions within the county to understand current conditions and needs. Connect systems to resources that can support addressing challenges.

**Broadband Strategy: Form and support a Wasco County Broadband Action Team (BAT) with representatives from organizations and communities around the region to support closing the digital divide.**

- Work with the BAT to support a gaps analysis leveraging the Faster Broadband Oregon mapping project as well as a local survey and interviews with key stakeholders. This will focus on infrastructure gaps but also explore opportunities to support enhanced utilization.

- Identify robust next steps from information gathered through this effort and begin implementing them with relevant partners.

**Broadband Strategy: Collaborate with public and private sector partners to address middle and last mile telecommunications infrastructure gaps and increase redundancy in communications networks.**

- Share information on grant resources available through State and Federal programs with public and private sector stakeholders interested in improving broadband access and utilization in Wasco County. Where appropriate, support applications that meet a community identified need.

- Engage with Q-Life's efforts to grow middle mile or last mile infrastructure to close access gaps.
- Support the Cascadia East Interconnection project to build more resilience into local networks.
- Identify opportunities to leverage "dig once" efforts to support reducing the cost of broadband infrastructure deployments in the County.

**Business Development Infrastructure Strategy: Support development of other business infrastructure. For example, transportation, housing, childcare, and community livability.**

- Engage with CGCC's Childcare Center feasibility work, the Four River's Early Learning Hub's study around innovative models for childcare, and support next steps from each.
- Track housing market data and share with decision makers.
- As appropriate, support communities in accessing resources to plan for housing and make necessary code amendments to support meeting housing needs.
- Participate in local and regional discussions on housing strategy representing economic development interests in Wasco County.
- With the next update of the Business Siting Guides, explore interest in creating a housing development guide.

**GOAL: COMMUNITY CAPACITY. WORK WITH LOCAL PARTNERS TO PROVIDE MEANINGFUL TECHNICAL ASSISTANCE, BRING IN ADDITIONAL RESOURCES, AND COMPLETE PROJECTS THAT ENHANCE THEIR COMMUNITY'S CAPACITY FOR APPROPRIATE ECONOMIC DEVELOPMENT.**

**Strategy: Work with local communities to build their capacity for developing and implementing priority projects that align with the EDC's vision and goals.**

- Identify partners within each community to support in developing additional capacity. Connect across communities where there are similar issues.
- Develop resources for shared issues, e.g. a communication plan example for infrastructure projects. Identify these opportunities through engagement with communities.
- Identify and share resources to support capacity building, like opportunities for board training, HR resources like the BOLI Technical Assistance services, etc.

**Strategy: Provide or facilitate training as needed to increase organizational capacity for economic development.**

- Support a grant writing training in Spring of 2022.
- Develop info for ongoing business grant and assistance resources to share with communities and businesses.
- Connect partners with training resources from other agencies, e.g. RCAC, LOC, etc.

**GOAL: INFORMATION SOURCE AND ADVOCACY. ENSURE THE BOARD OF COUNTY COMMISSIONERS, PARTNERS, FUNDERS, AND COMPANIES HAVE UP-TO-DATE INFORMATION ON ECONOMIC CONDITIONS, ACTIVITIES, AND PROJECTS THAT SUPPORT A RESILIENT LOCAL ECONOMY IN WASCO COUNTY AND INCREASE INVESTMENT IN ITS COMMUNITIES.**

**Strategy: Gather information on economic development related projects and strategies from throughout Wasco County.**

- Complete the Community Enhancement Project process annually.

**Strategy: Maintain up-to-date information on economic and demographic trends, land availability, and major employers.**

- Develop a cycle for updating major items with one occurring annually: major employers, land/building availability, business development guides, strategic action plan, etc. Focus for this year: Explore Land availability resources.

**Strategy: Develop a strong web presence focused on business and economic development that highlights key business resources and opportunities as well as shares EDC activities in a meaningful way.**

- Review and update the EDC's webpage. Support more connections with Chamber and partners' web presence to ensure consistent information is being shared with businesses.
- Explore opportunities to connect with and support content with partners around business resources.

**Strategy: Support communities in connecting with their State and Federal elected officials to talk about community priorities, projects and funding needs.**

- Share information on who elected officials are to support further engagement.
- Explore annual engagement with the State and Federal delegations around the annual Community Enhancement Project list and priority issues to better share our community's successes and needs. Share these locally as well.
- Engaging with local leaders about processes for starting or growing a business in Wasco County and work with partners to be a conduit for feedback from businesses on these processes.

## **GOAL: STRONG AND SUSTAINABLE EDC. STRENGTHEN RELATIONSHIPS WITH PARTNERS, DIVERSIFY FUNDING STREAMS, AND PROVIDE EFFECTIVE SERVICES TO COMMUNITIES AND BUSINESSES IN WASCO COUNTY.**

### **Strategy: Explore diversification of funding streams to support the EDC's efforts.**

- Continue to seek grant funding to expand services in program areas where there are resources available to develop new programming (e.g. Rural Opportunity Initiative grant funding for entrepreneurship system development and programming). Engage with partners to develop these opportunities to ensure alignment and collaboration.
- Where efforts are successful, work to develop sustainable funding resources to maintain grant funded programming.

### **Strategy: Maintain and implement a long-term economic development strategy as well as intentional annual work plans to guide the EDC's activities.**

### **Strategy: Create measurements and track outcomes for the EDC's work.**

- Develop measurements to track over time to better understand and communicate the EDC's impact.

### **Strategy: Connect the EDC's work to strategies grounded in community economic development best practices.**

- When opportunities arise, participate in conferences and trainings focused on enhancing staff knowledge and sharing resources with the Commission to enhance capacity.

# 2022 COMMUNITY ENHANCEMENT PROJECTS

Each year the Wasco County EDC gathers information about key community economic development projects and activities throughout Wasco County. The EDC then develops a project prioritization ranking and presents it to the Board of County Commissioners for acknowledgement.

Prioritization is then annually incorporated into this Strategic Action Plan for the EDC and included in the Mid-Columbia's regional Comprehensive Economic Development Strategy (CEDs) which further highlights projects with regional significance. These documents can be used by project proponents to show local support when seeking funding sources.

## PRIORITIZATION CRITERIA

1. ADDRESS SPECIFIC ECONOMIC DEVELOPMENT CHALLENGE OR OPPORTUNITIES
2. CRITICAL INFRASTRUCTURE FOCUS
3. READINESS TO PROCEED
4. IMPACT OF INCLUSION IN RANKING PROCESS.

In 2022, Wasco County EDC prioritized the 35 new or ongoing projects submitted by 22 entities into the list below. The EDC ranks the top 10 projects and includes the others un-ranked in Attachment A. This list was acknowledged by the Wasco County Board of Commissioners at their January

5, 2022 meeting and will be incorporated into the CEDs at MCEDD's March 17, 2022 Board Meeting.

1. City of The Dalles- Dog River Pipeline
2. White River Health District-Deschutes Rim Health Clinic Expansion
3. City of Mosier-Joint Use Facility
4. City of Dufur-Drinking Water System Improvements
5. Q-Life Cascadia East Interconnection and Colocation Facility
6. Columbia Gorge Community College-Child Care Center
7. Maupin Area Chamber of Commerce-Deschutes Rim Athletic Complex
8. Northern Wasco County Park and Recreation District-Sorosis Park Redevelopment
9. Q-Life-South Wasco County Fiber Expansion
10. Wy'East Resource Conservation and Development – Dufur Rural Innovation Hub

# Fiscal Year 2022 State Homeland Security Program Project Application

## Overview

This project application is for jurisdiction applying for the FY2022 State Homeland Security Program (SHSP) grant. Every project submitted by a county or tribe must complete this application. No more than 10 project applications may be turned in per county or tribe.

**Type of Grant Funding:** Allocation Based

## I. General Project Information

County/Tribe  
Wasco County

Applicant Agency (agencies)  
Wasco County Sheriff's Office

Project Priority Rank (See your Combined  
Cover Sheet) 1

Federal Funds Requested  
\$29003.67

Project Title  
Wasco County Communications

Amount of Project Funding Dedicated to  
LETPA  
25791.30

Project Budget Defined by POETE

Exercises	\$

State Investment Justification  
Emergency Communications [SIJ]

Project Core Capability  
Operational Communications

State Strategy **GOAL #**  
**Ensure the capacity for timely communications in support of security, situational awareness, and operations by any and all means available, among and between affected communities in the impact area and all response forces.**

State Strategy **OBJECTIVE #**  
Maintain and upgrade current equipment; invest in new and redundant equipment. Invest in development of infrastructure.

Will this project result in a NIMS-Typed resource?

If yes, will this be a Tier I or Tier II

## II. Requirements

resource?  
Yes

Tier I

Clearly describe the terrorism nexus of this project.

How will this project allow you to prepare for, respond to, or recover from acts of terrorism?

The 2 partner agencies in this project have observed a steady rise in, unrest, protest, terrorism, vandalism throughout the United States. These disruptions have the potential to cause vandalism, violence and mass casualty events in Wasco County. A response to such an event would involve mutual aid of all of the Wasco County First Responder agencies as well as State and Federal Public Safety Agencies. It is through protest and vandalism and wildfires these past two years that have further underscored the communications gaps that are identified and addressed in this project. The terrorism nexus of this project is a mass shooting at the SOAK Festival during the Memorial Day Weekend. SOAK is the annual regional Burning Man in Oregon.

Clearly describe how the project ties to THIRA/SPR.

How will this project address the core capability gap identified your THIRA/SPR and selected above?

A comparison between the State of Oregon THIRA/SPR and Wasco County THIRA indicates a number of direct ties between the capability targets and the associated objectives of this project. The Phase 1 Wasco Communications Upgrade impacts the following specific THIRA Capability Targets:

Operational Coordination

- Incident Command, Fire, EMS and Law Enforcement
- Incident Management during wildfires, protests or any other large scale events requiring response from multiple agencies ( Wildfire events, Protests, Festivals)

Intelligence and Information Sharing

- Disseminating Intelligence and Information during upcoming protests, potential suspects in county, mutual aid Search and Rescue, or large search for suspects involving multiple agencies (several incidents during 2021)

Interdiction and Disruption

- Tactical Law Enforcement Operations
- Wide Area Search -- mutual aid Search and Rescue, or large search for suspects involving multiple agencies (several incidents during 2021)

Operational Communications

- Law Enforcement Operations
- Interoperable communications systems

Situational Assessment

- Law Enforcement Operations -
- Medical and Public Health Assessments - COVID-19 response

### III. IJ Specific Requirements

**Complete ONLY the section which ties to your chosen IJ  
[Planning, Emergency Communications, Emergency Operations Center, Cyber  
Security]**

#### **Planning**

Will this project result in a new/revised  
plan?

No

If Yes, what type of Exercise will be held  
to test the plan

If No, what is the deliverable of this project?

Does this project support the Cascadia Rising 2022 exercise?

No

#### **Communications**

Does the Jurisdiction have a current  
Communications Plan?

Yes

Provide the page and paragraph of the  
communications plan to which this project  
ties. Include the language in the  
appendices

6.3. Wasco County – Interoperable  
Communications Plan

Wasco County needs operability first  
before it can consider interoperability.  
They have many outstanding issues  
that affect their ability to support their  
own internal operations and their  
community. New and updated  
systems need to be put in place to  
support their primary operations  
before they can consider how best to  
work with their neighbors. pg 71

Project Name: Wasco County Radio

and Dispatch Systems Plan and Specifications  
Background Information  
Wasco County needs improvements to their primary radio system, associated tower sites, and technology systems in their primary and backup dispatch centers. Wasco County Sheriff's Office, Fire/EMS Departments/Districts, and The Dalles Police Department operate First Responder single and multi-site standalone VHF repeaters throughout the County. The Sheriff's Office repeaters all operate on the same VHF repeater pairs using separate uplink CTCSS. pg 57

Is the project P25 compliant?  
Yes

If P25 is not applicable to the project, describe why.

Does the project tie to the Oregon SCIP?  
Yes

Provide the page and paragraph of the SCIP the project ties to.  
Marker 13 - Radio programming.  
Radios programmed for National/Federal, SLTT interoperability channels and channel nomenclature consistency across a state / territory. Page 17  
Marker 15 - NG911 implementation.  
NG911 implementation underway to serve state / territory population. Page 18  
Marker 23 -Sustainment assessment.  
Identify interoperable component system sustainment needs;(e.g. communications infrastructure, equipment, programs, management) that need sustainment funding. Page 20

Does the project tie to SAFECOM?  
Yes

Describe how the project ties to SAFECOM.  
This project ties into Priority 4 and 5

of the SAFECOM Emergency  
Communications Priorities  
Priority 4: Activities that Enhance  
Communications Coordination  
Priority 5: Standards-based  
Technology and Infrastructure

Does the jurisdiction have a radio repair  
and replacement plan?

Yes

If Yes, describe the radio repair and  
replacement plan.

All agencies have set aside funds for  
radio repair and replacement as  
needed.

Have you coordinated with the OEM Communications Expert, the state SWIC, or the  
State SIEC in the development of this project?

Choose One

### **Emergency Operation Centers**

Is this project for the jurisdiction's primary  
EOC?

No

Is this project for the jurisdiction's  
secondary EOC?

Choose One

Provide the Emergency Operation Plan (EOP) page and paragraph which identifies  
the project location as the primary or secondary EOC. Include the language in the  
appendices

### **Community Resilience and Engagement // Mass Care and Mass Casualty**

Does the jurisdiction have a mass care or  
mass casualty plan

Provide the page and paragraph of the  
plan which this project is implementing.  
Include the language in the appendices

No

### **Cyber Security**

Has the jurisdiction performed a formal assessment?

Yes

If the jurisdiction has not performed a formal assessment, does the jurisdiction have a  
formal cyber security plan/strategy?

Choose One

Please provide the page and paragraph number where this project is referenced in the assessment or plan. Include the language in the appendices

Not applicable to this project

#### **IV. Project Details**

**20pts**

Are there multiple counties/tribes/jurisdictions/agencies involved in this project, if yes list here

Wasco County Sheriff's Office

The Dalles Police Department

Wasco County Sheriff's Office Search and Rescue

Describe the project. What will this project do? Please be as clear and direct as possible in your first paragraph. Supporting details may be provided in 2<sup>nd</sup> or 3<sup>rd</sup> paragraphs.

The 2 partner agencies in this project have observed a study rise in, unrest, protest, terrorism, vandalism throughout the United States. These disruptions have the potential to cause vandalism, violence and mass casualty events in Wasco County. A response to such an event would involve mutual aid of all of the Wasco County First Responder agencies as well as State and Federal Public Safety Agencies. It is through protest and vandalism and wildfires these past two years that have further underscored the communications gaps that are identified and addressed in this project. The terrorism nexus of this project is a mass shooting at the SOAK Festival during the Memorial Day Weekend. SOAK is the annual regional Burning Man in Oregon.

List equipment or products purchased through the project. If, applicable, specify which are NIMS-Typed resources and whether it is Tier-I or Tier-II resources.

Sheriff's Office - 8 APX 4000 VHF Model 2 Portable, with P-25 capabilities

The Dalles PD - 2 APX 4000 VHF Model 2 Portable, with P-25 capabilities

Sheriff's Office Search and Rescue- 15 Minitor VI Pager - Standard MIL-STD 810G

Have you received quotes for the costs of the items, training, or services described above?

Yes

#### **V. Project Impact**

**30pts**

Describe who in the community will be directly impacted by this project and how.

There has been a rise in unrest, vandalism, and protests in the USA and Oregon

since 2019. These large gatherings with the potential for violence have put an enormous strain on responding agencies. In addition to these protests, Public safety agencies, and Fire/EMS agencies responded to wildfires that burned over thousands of acres and cause more than 1000 citizens to be evacuated or put on alert including portions of the city of The Dalles.

Wasco County is strategically located with 7 main transportation arteries consisting of two Type 1 railroads, one interstate, 3 main highways, and one waterway. As such, if there is a Cascadia event, large protests causing damage to infrastructure in Portland or wildfires, Wasco County would be one of the main areas for staging or evacuations.

To address communications shortcomings and interoperability needs, the Sheriff's Office teamed up with all the First Responder agencies and 911 Dispatch in Wasco County to identify communications needs. Wasco County will be doing a phased approach to upgrade communications equipment for all First Responder agencies in the County for interoperability and P25 compliance

Describe what impact this project will have on the whole community.

Those primarily impacted will be the First Responders and the community or citizens in the vicinity of the event or incident. The citizens and communities safety, protection and their medical treatment will be greatly enhanced through the improved capacity for first responders to receive the initial call and to able to communicate with other agencies to quickly neutralize the threat and/or secure the area.

The whole community will be better served by improved communications and interoperability in a mutual aid event due to the ability to request the appropriate resources in a timely manner without pulling unnecessary resources from other areas.

Describe how the project will enhance the core capability for the jurisdiction

Communications are mission-critical for public safety agencies. Wasco County First Responder agencies perform mutual aid on an almost daily basis. With their current capabilities, response time and effective interoperability and communication are severely limited. With the new communications, interoperability and basic communications will be greatly enhanced, enabling a better more timely response with the correct resources.

## **VI. Capability History**

**5pts**

Describe the jurisdictions current functionality in the chosen core capability

Currently, Wasco County Sheriff's Office has radio equipment that is P-25 compliant but is nearing the end of their service life and are no longer supported. Sheriff's Office and TDPD has begun to replace using their radio/repair replacement program. Also, Wasco County Search And Rescue are in the process of upgrading their equipment to be P-25 compliant and for greater interoperability. Wasco County has completed a regional communications study that has identified the areas that Wasco County needs to improve or upgrade to be able to provide

interoperability communications with its sister units in neighboring counties.

Was the current functionality developed using any federal funds?

Yes

## **VII. Gap Information**

**20pts**

Describe the current gap in the capability.

Currently, the radio communications technology that is being used in Wasco County is outdated and is no longer supported with replacement parts. Wasco County Sheriff's Office and The Dalles Police Department are not using the same type of radios which severely hampers interoperability and communications in an event requiring mutual aid. Wasco's County Search and Rescue Volunteer communications equipment that have intermittent failures which severely hamper response.

Describe how the gap was identified (real event, exercise, assessment).

The gap has been identified during the recent Wildfire events, Search and Rescue events and during the 2019 Regional Communications Study

Describe what the agency/community has done to fill the gap so far.

All agencies have been using their radio repair replacement plan to update/upgrade/replace radio equipment

Describe how the proposed project will fill the gap.

Wasco County First Responder agencies will be performing a phased approach to update all communications equipment for P-25 compliance, interoperability and coverage. This will be Phase Two of the communications upgrade

## **VIII. Sustainment**

**15pts**

Describe the jurisdiction's plan to sustain the capabilities built by this project

The partner agencies in this project perform monthly and quarterly training activities. The training includes usage of communications equipment. We will seek to identify further funds sources for the continued phased approach to upgrade Wasco Counties communication infrasture and mobile radio communicastions. The purchase of this communicatiosn equipment will allow the county agencies to upgrade the radios and other communications equipment with new technology without the need to replace of the radio itself. All agencies will be setting asside funding for the repair and replacement of the radios and equipment

## **IX. Milestones**

**10pts**

Quarter 1	<ol style="list-style-type: none"> <li>1. Complete agreement with OEM for Project Funding.</li> <li>2. Finalize and order equipment per quotes received.</li> <li>3. Complete and file first quarter grant performance report with OEM</li> </ol>
Quarter 2	<ol style="list-style-type: none"> <li>1. Receive equipment as ordered</li> <li>2. Distribute equipment to agencies</li> <li>3. Program of mobile radio equipment and pagers and test</li> <li>4. Install Repeater antenna and test</li> <li>5. Complete and file second quarter grant report</li> </ol>
Quarter 3	<ol style="list-style-type: none"> <li>1. Train Staff on proper usage of equipment</li> <li>2. Adjust any needed programming</li> <li>3. File third quarter report to OEM</li> </ol>
Quarter 4	<ol style="list-style-type: none"> <li>1. Complete all final testing and training as needed</li> <li>2. Submit Board of Commissioner report on successful implementation of equipment</li> <li>3. Complete and file final Grant Performance Report with OEM.</li> </ol>

populations

## II. Requirements

Clearly describe the terrorism nexus of this project.

How will this project allow you to prepare for, respond to, or recover from acts of terrorism?

Wasco County and communities have observed a steady rise in, unrest, protest,

Will this project result in a NIMS-Typed resource?

resource?

Yes

If yes, will this be a Tier I or Tier II

Tier I

terrorism, vandalism throughout the United States. These disruptions have the potential to cause vandalism, violence and mass casualty events in Wasco County. A response to such an event would involve mutual aid of all of the Wasco County First Responder agencies as well as State and Federal Public Safety Agencies. It is through protest and vandalism and wildfires these past years that have further underscored the mass care gaps that are identified and addressed in this project. The terrorism nexus of this project is a mass shooting at the SOAK Festival during the Memorial Day Weekend. SOAK is the annual regional Burning Man in Oregon.

Clearly describe how the project ties to THIRA/SPR.

How will this project address the core capability gap identified your THIRA/SPR and selected above?

A comparison between the State of Oregon THIRA/SPR and Wasco County THIRA indicates a number of direct ties between the capability targets and the associated objectives of this project. The Wasco County Mass Care Triage project impacts the following specific THIRA Capability Targets:

Mass Search and Rescue Operations:

Deliver traditional and atypical search and rescue capabilities, including personnel, services, animals, and assets to survivors in need, with the goal of saving the greatest number of endangered lives in the shortest time possible

Public Health, Healthcare and Emergency Medical Services

Provide lifesaving medical treatment via Emergency Medical Services and related operations and avoid additional disease and injury by providing targeted public health, medical, and behavioral health support, and products to all affected populations.

### III. IJ Specific Requirements

**Complete ONLY the section which ties to your chosen IJ  
[Planning, Emergency Communications, Emergency Operations Center, Cyber  
Security]**

#### **Planning**

Will this project result in a new/revised plan?

No

If Yes, what type of Exercise will be held to test the plan

If No, what is the deliverable of this project?

Does this project support the Cascadia Rising 2022 exercise?

No

### **Communications**

Does the Jurisdiction have a current Communications Plan?

Choose One

Provide the page and paragraph of the communications plan to which this project ties. Include the language in the appendices

Is the project P25 compliant?

Choose One

If P25 is not applicable to the project, describe why.

Does the project tie to the Oregon SCIP?

Choose One

Provide the page and paragraph of the SCIP the project ties to.

Does the project tie to SAFECOM?

Choose One

Describe how the project ties to SAFECOM.

Does the jurisdiction have a radio repair and replacement plan?

Choose One

If Yes, describe the radio repair and replacement plan.

Have you coordinated with the OEM Communications Expert, the state SWIC, or the State SIEC in the development of this project?

Choose One

### **Emergency Operation Centers**

Is this project for the jurisdictions primary EOC?

No

Is this project for the jurisdictions secondary EOC?

Choose One

Provide the Emergency Operation Plan (EOP) page and paragraph which identifies the project location as the primary or secondary EOC. Include the language in the

appendices

### **Community Resilience and Engagement // Mass Care and Mass Casualty**

Does the jurisdiction have a mass care or mass casualty plan

Provide the page and paragraph of the plan which this project is implementing. Include the language in the appendices

Yes

ESF 6 in WCEOP  
4.1.2  
- Open designated mass care shelter and stock those facilities with food, water, medical supplies..  
- provide trained staff  
ESF-13 in WCEOP  
ESF 13-5 Mobilize appropriate emergency personnel and first responders. Determine responder activities and establish non-contaminated areas prior to mobilizing resources

### **Cyber Security**

Has the jurisdiction performed a formal assessment?

No

If the jurisdiction has not performed a formal assessment, does the jurisdiction have a formal cyber security plan/strategy?

Choose One

Please provide the page and paragraph number where this project is referenced in the assessment or plan. Include the language in the appendices

Not applicable to this project

## **IV. Project Details**

**20pts**

Are there multiple counties/tribes/jurisdictions/agencies involved in this project, if yes list here

Wasco County Sheriff's Office  
Wasco County  
The Dalles Police Department  
North Central Public Health

City of Dufur  
City of Maupin  
City of Mosier  
Tygh Valley  
Wamic

Describe the project. What will this project do? Please be as clear and direct as possible in your first paragraph. Supporting details may be provided in 2<sup>nd</sup> or 3<sup>rd</sup> paragraphs.

Those primarily impacted will be the First Responders and the community or citizens in the vicinity of the event or incident. The citizens and communities safety, protection and their medical treatment will be greatly enhanced through the improved capability of the first responders on scene. 5 of the 7 Ambulance Providers are volunteer organizations in Wasco County. Due to the size and remote locations in Wasco County makes it a priority to give First Responders (LE) the right tools for life saving thereby increasing the chance for the survival of the victim. Response from the Ambulance provider could be as long as 15/20 min making it imperative that we equip our first responders with the right tools.

List equipment or products purchased through the project. If, applicable, specify which are NIMS-Typed resources and whether it is Tier-I or Tier-II resources.

Type 1 resource  
30 Zoll AED 3 - Full Auto

Have you received quotes for the costs of the items, training, or services described above?

Yes

## **V. Project Impact**

**30pts**

Describe who in the community will be directly impacted by this project and how.

Wasco County and Communities have observed a study rise in, unrest, protest, terrorism, vandalism throughout the United States. These disruptions have the potential to cause vandalism, violence and mass casualty events in Wasco County. A response to such an event would involve mutual aid of all of the Wasco County First Responder agencies as well as citizens on scene. It is through protest and vandalism and wildfires these past years that have further underscored the mass casualty gaps that are identified and addressed in this project. The terrorism nexus of this project is a mass shooting at the SOAK Festival during the Memorial Day Weekend. SOAK is the annual regional Burning Man in Oregon. Having AED with the first responders and located in strategic places will provide injured people a better chance in making it to the hospital.

Describe what impact this project will have on the whole community.

Those primarily impacted will be the First Responders and the community or

citizens in the vicinity of the event or incident. The citizens and communities safety, protection and their medical treatment will be greatly enhanced through the improved capability of the first responders on scene.

The whole community will be better served by improved medical equipment in a mutual aid event due to the ability to request the appropriate resources in a timely manner without pulling unnecessary resources from other areas.

Describe how the project will enhance the core capability for the jurisdiction

Triage medical equipment are mission-critical for public safety agencies. Wasco County First Responder agencies perform mutual aid on an almost daily basis. With their current capabilities, response time is severely limited due to limited resources. With the new medical equipment (AED) triage will be greatly enhanced, enabling a better response with the correct resources.

## **VI. Capability History**

**5pts**

Describe the jurisdictions current functionality in the chosen core capability

Currently, Wasco County and communities have limited AED located in strategic locations.

Was the current functionality developed using any federal funds?

Yes

## **VII. Gap Information**

**20pts**

Describe the current gap in the capability.

Currently, AED locations are limited due to the High cost of the equipment.

Describe how the gap was identified (real event, exercise, assessment).

The gap has been identified during the recent motor vehicle accidents, Search and Rescue events and during large events like the annual Fair.

Describe what the agency/community has done to fill the gap so far.

Wasco County and communities have purchased limited AED and have them centrally located.

Describe how the proposed project will fill the gap.

Wasco County First Responder agencies will be first on site during a accident and citizens will have access to AED which will be placed in strategic and easy accessible locations.

## **VIII. Sustainment**

**15pts**

Describe the jurisdiction's plan to sustain the capabilities built by this project  
 The partner agencies in this project perform normal maintenance and give yearly training to its first responders, city, county and community staff

IX.	Milestones	10pts

## **Hazard Mitigation Grant Program Cost Share Assistance**

Submitting this form articulates a jurisdictions need for Non-Federal cost share assistance for Hazard Mitigation Grant Program projects for Post Fire 5327 and 2020 Wildfire Disaster 4562. By submitting this form alone, it **does not guarantee funding**. FEMA funding generally takes 12 to 18 months from FEMA review to award depending on complexity of submitted activity. To be considered for cost share assistance, complete this form and submit it to [shmo@mil.state.or.us](mailto:shmo@mil.state.or.us). This form will also be used for the Interagency Hazard Mitigation Team (IHMT) review panel when activated.

### **Subapplicant Information**

1. Select the type of entity you fall under that is seeking HMA funding (*select one*):

- ☐ State Government                      ☐ Tribal Government  
☒ Local Government                      ☐ Private Nonprofit (PNP)

2. Subapplicant: [Wasco County](#)

Grant Round (choose one): ☐ 4562    ☒ 5327

Project Name: [Wamic Community center generator, Wamic Fire and EMS generator, Barlow Water generator](#)

County: [Wasco](#)

Oregon has some of the most productive soil in the world. Soil mapping done by the USDA Natural Resources Conservation Service (NRCS (<https://www.nrcs.usda.gov/wps/portal/nrcs/site/national/home/>)) is the most common tool used for identifying the types of soils in an area. The NRCS provides a rating for each soil type that indicates how suited the soil is for agriculture. Oregon's land use laws help keep the best soils for crop cultivation and agricultural use. Soils that are less productive have more opportunities for development than higher quality soils.

NRCS does not have the ability to map each parcel of land, so it looks at larger areas. This means that the map may miss a pocket of different soils. DLCD has a process landowners can use to challenge NRCS soils information on a specific property. Owners who believe soil on their property has been incorrectly mapped may retain a "professional soil classifier...certified by and in good standing with the Soil Science Society of America" (ORS 215.211 ([https://www.oregonlegislature.gov/bills\\_laws/ors/ors215.html](https://www.oregonlegislature.gov/bills_laws/ors/ors215.html))) through a process administered by DLCD. This soils professional can conduct an assessment that may result in a change of the allowable uses for a property.

## Applicability and Process

Soil capability is a measure the soil's productivity potential for farm crops and forests. The rules for an assessment of a soil's productivity apply to land zoned exclusive farm use or for mixed farm and forest use (OAR 660-033-0045 (<https://secure.sos.state.or.us/oard/displayDivisionRules.action?selectedDivision=3083>)). They also apply to rezoning forestland for non-resource use when the applicant relies on alternate soils information to show that the land should not be agricultural. The rules can apply to other changes as well, including those for comprehensive plan designations, zoning, non-farm land divisions, and certain dwellings.

DLCD maintains a list of soils professionals who are qualified to help landowners prepare a property-specific soil assessment. Other soil consultants may be qualified but are not allowed to take part in the program unless they apply to DLCD. A property owner must select a professional from the list below in order to use non-NRCS soils data in a land use application. The soils professional conducts a site investigation and prepares a soils assessment for review by DLCD.

DLCD will review the soils assessment upon receiving a completed application form ([/lcd/FF/Documents/soils\\_assessment\\_submittal\\_form\\_2020.pdf](/lcd/FF/Documents/soils_assessment_submittal_form_2020.pdf)) and the \$625 fee. Occasionally soils assessments are audited by a DLCD soils consultant who may need to go to the subject site to investigate. The owner's soils professional is given an opportunity to correct any issues identified by DLCD. DLCD does not submit a soils assessment to a local government without applicant consent and a completed Soils Assessment Release Form ([/lcd/FF/Documents/soils\\_assessment\\_release\\_form\\_2020.pdf](/lcd/FF/Documents/soils_assessment_release_form_2020.pdf)).

## Soils Professionals

Landowners who desire to use non-NRCS agricultural soil capability data in a land use application must retain a certified professional from the table below. This listing is not an endorsement, and those requesting a soil assessment should get references and bids from more than one person.

"STEWARDSHIP IN FORESTRY"

Forest health and fuel reduction are key directives that the Oregon Department of Forestry manages and promotes throughout Oregon. Locally in Wasco and Hood River counties, the Oregon Department of Forestry works to promote forest health and fuel reduction best management practices. These best management practices include activities such as forest thinning, tree pruning, removal of insect and diseased trees, as well as slash and fuel reduction projects like mowing, mastication, and prescribed fire. Active landowner involvement and management is essential to making Oregon's forests healthy and fire resilient.

David Wilson has and is currently using a combination of these best management practices to promote forest health and reduce hazardous fuels on his approximately 40-acre parcel along 7-Mile Road. ODF recognizes that David mows to reduce fine/flashy fuels. He has completed individual tree pruning to reduce ladder fuels. David actively removes insect and disease killed conifer to reduce the spread and impact to not only his trees but his neighbor's trees. This proactive approach to land management is key to mitigating fire hazards and to the sustained health of our local forests.

Unit Forester, The Dalles  
Oregon Department of Forestry

March 15, 2022

Sheila Dooley  
3300 Vensel Road  
Mosier, OR 97040

**SUBJECT: Review of Order 1 Soil Survey of Property Located adjacent to 7100 Seven Mile Hill Road, also known as T2N, R12E, Section 22, Tax Lot 4400 (40.10 acres), West of The Dalles in Wasco County, Oregon (Site)**

Dear Ms. Dooley:

Valley Science and Engineering (Valley) was retained to conduct a review of the above referenced soil survey. The parcel is zoned Forest [F-2(80)], a resource zone, and is being considered for a comprehensive plan amendment and zone change to Farm-Forest [F-F(10)], a non-resource zone.

## RELEVANT CRITERIA

The Oregon Department of Land Conservation and Development (DLCD) requires a determination of whether any resource land is agricultural land as part of the process to change from a resource designation to a non-resource designation (OAR 660-033-0030(5)(c)(A) attached as Appendix A). This is determined using the Natural Resources Conservation Service (NRCS) Land Capability Classification (LCC) system whereby lands east of the Cascades are considered “agricultural land” if they are LCC I – VI. Although there are a few exceptions, lands that are LCC VII and VIII are not considered agricultural lands (non-resource). This standard applies to lands zoned for either exclusive farm use or forest use when requesting a change to a non-resource designation. The standard is that a site “predominantly consist” of land that is LCC VII or VIII (more than 50%).

The Order 1 Soil Survey report for this Site concluded that 51.8% of the 40.10-acre parcel (Parcel 4400 on tax lot map included as Appendix B) contained LCC VII and VIII soils. Our review is limited to what is presented in the Order 1 Soil Survey report that was provided (a copy of the DLCD-reviewed report with selected highlights and notes is attached as Appendix C).

In our review of the Order 1 Soil Survey report, Valley was unable to confirm the report’s findings that the Site qualifies as non-resource land. Valley has not visited the property, however, there are several inconsistencies throughout the report that are apparent and do not require a site visit. The inconsistencies include:

- Reference to the wrong Section (23C) in several places that was carried forward through the review by DLCD.

- Numerical test pit locations shown on the sketch in the Order 1 Soil Survey report do not match the GPS coordinates provided in the report (Appendix C).
- GPS coordinates do not match the visible test pits in the most recent Google Earth image (July 24, 2021) taken after the assessment was performed (Appendix D) and do not match the relative locations shown on the previously mentioned sketch.
- Both the sketch of the test locations and the Order 1 soils map appear to have been presented on an oblique view of an aerial image and no scale is shown on either so it is not possible to accurately measure and confirm acreages within any of the delineations.
- The terms “generally suited” and “generally unsuited” are used throughout the report but those terms are specific to assessments for non-farm dwellings and are not applicable in non-resource applications.

However, the primary issue that leads Valley to conclude that the Site does not qualify as non-resource land is based on the fact that the field data noted for several of the test pits do not support a designation as LCC VII or VIII.

The Guide for Placing Soils in Capability Classes in Oregon (USDA NRCS, Revised June 1977) is attached in Appendix E. The various criteria in the guide rely upon measurable soil characteristics, not taxonomy. The primary criteria relied upon in the Order 1 Soil Survey report for determining the LCC was the Available Water Capacity (AWC). The guide shows that soils with an AWC greater than or equal to 2 inches are LCC VI or better. Following the matrix, soils with an AWC less than 2 inches are either LCC VII or VIII.

AWC values are provided for each soil in the published soil survey by the NRCS. The values for any given soil are based on representative samples of the fine earth fraction, tested in a laboratory, and then adjusted based on coarse fragment content. The typical depths, textures, and coarse fragment content are from the official series descriptions (Appendix F). Unless laboratory analyses are performed, the NRCS values for a given texture (adjusted for pedon-specific coarse fragment content) need to be relied upon to estimate the numerical value for comparison to the LCC standard in the matrix.

Data from the NRCS for the 3 soils identified or referenced on the Site (Skyline, Wamic and Bodell) are presented in Appendix G1. These data show the base AWC values, coarse fragment adjustments, and net AWC values for typical profiles that correlate with the published AWC values in the web soil survey. Using those data and the pedon-specific coarse fragment content, the AWC for several of the soil profiles that were described in the report as being LCC VII are actually LCC VI or better (Appendix G2). Based on the AWC values calculated from the field data presented in the report, 11 of the soil test pits that were designated as LCC VII, appear to be LCC VI or better. Because of the inconsistencies in the report related to test pit location it is not possible for Valley to use the soil investigation and test pit coordinates to accurately estimate the actual acreage represented by the soil that is LCC VI or better and not LCC VII. However, it appears that the LCC VI or better soil represents substantially more than 50% of Parcel 4400.

## SUMMARY AND CONCLUSIONS

Valley has reviewed the data and conclusions presented in the Order 1 Soil Survey of property located adjacent to 7100 Seven Mile Hill Road, also known as T2N, R12E, Section 22, Tax Lot 4400 (40.10 acres), West of The Dalles in Wasco County, Oregon. Based on the observations in the Order 1 Soil Survey report and the available soil survey data from the NRCS Web Soil Survey, Valley concludes that 11 of the soil test pits represent soil that appear to be LCC VI or better instead of LCC VII. Based on Valley's review, it is reasonable to conclude that the LCC VI or better soils represent greater than 50% of the acreage. Therefore, the Site does not satisfy the criteria in OAR 660-033-0030(5)(c)(A) for conversion to a non-resource plan designation and zone.

## Chapter 660

### Division 33 AGRICULTURAL LAND

#### 660-033-0030 Identifying Agricultural Land

(1) All land defined as "agricultural land" in OAR 660-033-0020(1) shall be inventoried as agricultural land.

(2) When a jurisdiction determines the predominant soil capability classification of a lot or parcel it need only look to the land within the lot or parcel being inventoried. However, whether land is "suitable for farm use" requires an inquiry into factors beyond the mere identification of scientific soil classifications. The factors are listed in the definition of agricultural land set forth at OAR 660-033-0020(1)(a)(B). This inquiry requires the consideration of conditions existing outside the lot or parcel being inventoried. Even if a lot or parcel is not predominantly Class I-IV soils or suitable for farm use, Goal 3 nonetheless defines as agricultural "Lands in other classes which are necessary to permit farm practices to be undertaken on adjacent or nearby lands." A determination that a lot or parcel is not agricultural land requires findings supported by substantial evidence that addresses each of the factors set forth in 660-033-0020(1).

(3) Goal 3 attaches no significance to the ownership of a lot or parcel when determining whether it is agricultural land. Nearby or adjacent land, regardless of ownership, shall be examined to the extent that a lot or parcel is either "suitable for farm use" or "necessary to permit farm practices to be undertaken on adjacent or nearby lands" outside the lot or parcel.

(4) When inventoried land satisfies the definition requirements of both agricultural land and forest land, an exception is not required to show why one resource designation is chosen over another. The plan need only document the factors that were used to select an agricultural, forest, agricultural/forest, or other appropriate designation.

(5)(a) More detailed data on soil capability than is contained in the USDA Natural Resources Conservation Service (NRCS) soil maps and soil surveys may be used to define agricultural land. However, the more detailed soils data shall be related to the NRCS land capability classification system.

(b) If a person concludes that more detailed soils information than that contained in the Web Soil Survey operated by the NRCS, would assist a county to make a better determination of whether land qualifies as agricultural land, the person must request that the department arrange for an assessment of the capability of the land by a professional soil classifier who is chosen by the person, using the process described in OAR 660-033-0045.

(c) This section and OAR 660-033-0045 apply to:

(A) A change to the designation of a lot or parcel planned and zoned for exclusive farm use, forest use or mixed farm-forest use to a non-resource plan designation and zone on the basis that such land is not agricultural land; and

(B) Excepting land use decisions under section (7) of this rule, any other proposed land use decision in which more detailed data is used to demonstrate that a lot or parcel planned and zoned for exclusive farm use does not meet the definition of agricultural land under OAR 660-033-0020(1)(a)(A).

(d) This section and OAR 660-033-0045 implement ORS 215.211, effective on October 1, 2011. After this date, only those soils assessments certified by the department under section (9) of this rule may be considered by local governments in land use proceedings described in subsection (c) of this section. However, a local government may consider soils assessments that have been completed and submitted prior to October 1, 2011.

(e) This section and OAR 660-033-0045 authorize a person to obtain additional information for use in the determination of whether a lot or parcel qualifies as agricultural land, but do not otherwise affect the process by which a county determines whether land qualifies as agricultural land as defined by Goal 3 and OAR 660-033-0020.

(6) Any county that adopted marginal lands provisions before January 1, 1993, may continue to designate lands as "marginal lands" according to those provisions and criteria in former ORS 197.247 (1991), as long as the county has not applied the provisions of ORS 215.705 to 215.750 to lands zoned for exclusive farm use.

(7)(a) For the purposes of approving a land use application on high-value farmland under ORS 215.705, the county may change the soil class, soil rating or other soil designation of a specific lot or parcel if the property owner:

(A) Submits a statement of agreement from the NRCS that the soil class, soil rating or other soil designation should be adjusted based on new information; or

(B) Submits a report from a soils scientist whose credentials are acceptable to the Oregon Department of Agriculture that the soil class, soil rating or other soil designation should be changed; and

(C) Submits a statement from the Oregon Department of Agriculture that the Director of Agriculture or the director's designee has reviewed the report described in paragraph (a)(B) of this section and finds the analysis in the report to be soundly and scientifically based.

(b) Soil classes, soil ratings or other soil designations used in or made pursuant to this section are those of the NRCS Web Soil Survey for that class, rating or designation, except for changes made pursuant to subsection (a) of this section.

(8) For the purposes of approving a land use application on high-value farmland under OAR 660-033-0090, 660-033-0120, 660-033-0130 and 660-033-0135, soil classes, soil ratings or other soil designations used in or made pursuant to this definition are those of the NRCS Web Soil Survey for that class, rating or designation.

## Soil Assessment Completeness Review

In accordance with OAR 660-033-0045(6)(a), the Department of Land Conservation and Development (DLCD) finds that this soils assessment is complete and consistent with reporting requirements for agricultural soils capability. The county may make its own determination as to the accuracy and acceptability of the soils assessment. DLCD has reviewed the soils assessment for completeness only and has not assessed whether the parcel qualifies as agricultural land as defined in OAR 660-033-0020(1) and 660-033-0030.

Hilary Foote  
DLCD Farm Forest Specialist  
March 29, 2001

The department will consider soil assessments under OAR 660-033-0030 to be complete if they meet the following standards:

(1) General information, to include:

- (a) Title of the report; Wildon – Order 1 Soil Survey
- (b) Person making request for soils assessment; David Wilson
- (c) Names of soil scientist/classifier conducting the field work and preparer of the report, along with their certification numbers; Gary Kitzrow, CPSC/CPSS #1741
- (d) Land use case file number (if available); n/a
- (e) County in which the assessment was conducted; Wasco
- (f) Location of the project site, including the township, range, section and tax lot numbers; Township 2N Range 12E Section 23 Taxlot 4400, Wasco County, Oregon
- (g) Present zoning designation; EFU **F-2 (80)**
- (h) Current land use; unknown
- (i) Parcel acreage: 40.13; evaluated: 40.13, and **40.10**
- (j) A description of the purpose of the assessment. Zone Change

(2) Previous Mapping or Background: The soil scientist/classifier shall provide a copy of the applicable and most current National Cooperative Soil Survey map(s) provided by the Natural Resources Conservation Service (NRCS) on the Web Soil Survey, with the area of investigation outlined on the map(s). The scale of the map(s) shall be identified and a list of the map units under investigation shall be listed. The applicable

interpretations and minor components (inclusions) for the map units for which the investigation is being made shall also be provided. NRCS mapped soils include: Wamic loam, 5 to 12 percent north slopes (capability class 4e), Wamic loam, 12 to 20 percent slopes (capability class 4e) and Wamic-Skyline complex, 2 to 20 percent slopes (capability class 4e (Wamic components) and 7s (skyline components)). See pages 8-9.

(3) Methods Used by Soil Scientist/Classifier: The soil scientist/classifier shall describe the methodologies used for the preparation of the report and shall include the following:

- (a) The level of order of survey used in the field survey, scale and type of maps used for field investigations, number of sample locations and observation points all confirming or disagreeing with the NRCS mapping units. The survey shall be one or more level of order higher than the NRCS survey as described in the NRCS Soil Survey Manual, 1993. Note that an Order 1 survey is more detailed than an Order 2 or greater survey. Order 1 soil survey was conducted
- (b) The date(s) of the field investigation; December 18-19, 2020
- (c) The methods used for observations (backhoe, auger, shovel, etc.) and methods used for documentation (for slope, color, pH, etc.); Backhoe, field texturing, munsell chart comparison, soil pH, field assessment, etc as described on page 1.
- (d) The number and location of borings either shown on an aerial photograph base map of the parcel or provided in a table with latitude and longitude coordinates. In conducting Order 1 soil surveys, the scale of the base maps used for the survey needs to be large enough to enable the identification of polygons of soil map units as consociation map units. Soil map units identified as a complex, association, or undifferentiated group should be avoided as this defeats the purpose of an Order 1 survey. If, however, the soils are so intermingled that they cannot be mapped at a reasonable scale so as to identify consociation map unit polygons, then there should be sufficient sampling and documentation of the complex to demonstrate this soil component distribution. A percentage of each member of the complex will be used in determining area of extent and the reported percentages will be based on this sampling and its documentation, including soil profile descriptions, boring locations and, where useful, photographs. 23 locations. Coordinates listed on page 1 and mapped on page 10
- (e) Geomorphic and vegetation correlations supporting the interpretation of land capability classes of soils that differ from those in the official soil survey information; and Described on page 2.
- (f) A notation of any limitations encountered during the field investigation, such as soil depth, drainage, slope or inaccessibility. No limitations noted (page 2).

(4) Results, Findings, and Decisions: The soils report shall describe how the level of order of survey used in this investigation differs from that used by NRCS in the original soil survey. The soils report shall also include:

- (a) An overview of the geology or geologic setting, describing sources of parent material, bedrock and related factors; Described on page 2
- (b) A description of the landforms and topography, confirming the relationship of landforms to soil mapping units; Described on pages 2 and 3
- (c) A description of on-site and adjacent hydrology, including surface and subsurface features, intermittent versus perennial, floodplain and floodways and other related information; Described on page 3.
- (d) A description of the revised soil mapping units with their range of characteristics, explaining how and why they differ from NRCS soil mapping. The soils report shall include a summary of soil variability incorporating significance of preceding weather (above or below average), where known and crops and natural vegetation present; and Described on page 3
- (e) A tabulation of all previous and revised soil mapping units complete with their acreages and land capability classification. Pages 3, 8, 9 and 13

(5) Summary or Conclusion: The soils report shall contain a section reiterating the purpose of the investigation, explaining the significance of the revised soil mapping and describing any other significant issues related to the report's purpose. Page 3

(6) References: This section may list any manuals or publications utilized or referenced by the report. Page 3

(7) Attachments: Other informational materials provided as attachments, such as maps, figures or appendices shall include the following and shall be printed on 8 ½ x 11" wherever possible:

- (a) Vicinity map at a scale of 1:48,000 or smaller showing the project location; Map included on page 11
- (b) The NRCS soils map generated from Web Soil Survey at a scale of 1:20,000 or larger outlining the project site; Map included on page 7
- (c) Site condition map (aerial photo) at a scale of 1:5,000 or larger outlining the project site and showing the location of site investigations (borings) and other relevant features; Map included on page 10
- (d) Topography map at a scale of 1:24,000 or larger outlining the project site; Map included on page 11
- (e) Assessor's map at a scale of 1:5,000 or larger outlining the project site; Map included on page 12
- (f) Revised soils map of the project site at a scale of 1:5,000 or larger; Map included on page 13

- (g) Soil profile descriptions and site observation notes; and Pages 14-36
- (h) Representative soil profile descriptions of any soil type identified in the project area that is not described or identified in the published soil survey for the area mapped. Page 37

(8) Soils reports shall be submitted electronically to the department to [hilary.foote@state.or.us](mailto:hilary.foote@state.or.us), accompanied by a Soils Assessment Submittal Form. Payment of a non-refundable administrative fee of \$625 should be sent by check.

## Soils Assessment Submittal Form

### Soils Professional Information

Soils professional\*: Gary A. Kitzrow

Certification number: 1741

### Property Information

Person who requested soils assessment: David Wilson

Mailing address: 7100 1 Mile Hill Rd The Dalles OR 97058

Email address: None

Telephone number: 541-490-3730

Property owner (if different):

Property address (if different): 7000 1 Mile Hill Rd The Dalles OR 97058

County: Wasco

Township: 2N Range: 12E Section: 22

Tax lot(s): 4400

Parcel Acreage: 40.15 Acres Evaluated: 40.13

Comprehensive Plan designation: —

Zone: EEU

Proposed land use action: Plan Amendment Zone change To RR10

The soils professional must submit an electronic copy of the soils assessment together with this form to Timothy Murphy, Farm and Forest Lands Specialist, at the above address. The person requesting the soils assessment or the property owner must submit a check for a non-refundable administrative fee of \$625 made out to the Department of Land Conservation and Development, to Timothy Murphy, at the same address.

Soils assessments must be consistent with the Soils Assessment Report Requirements and will be checked for completeness and be subject to audits as described in OAR 660-033-0030(9). Some soils assessments will additionally be subject to review and field checks by a DLCD-contracted soils professional as described in OAR 660-033-0030(9). Property owners and soils professionals will be notified of any negative reviews or field checks. Soils assessments will not be released to local governments without submittal of a signed release form by the property owner and person who requested the soils assessment; however, when released, any negative reviews or field checks will accompany the soils assessments.

The department and the Land Conservation and Development Commission will not be held liable for non-performance or information that is contained in soils assessments, or for negative reviews, field checks or audits of soils assessments. For the protection of the department and commission, we ask that you read and sign the following authorization and disclaimer:

*I hereby expressly give my consent, should I be notified by the department that the submitted soils assessment for my property is selected for a review and field check, to authorize timely*

access to my property by a DLCD-contracted soils professional to perform a field check to corroborate the information provided in the submitted soils assessment. I understand that failure to authorize access to the property may result in a negative review.

I hereby waive my right to pursue a claim for relief or cause of action alleging injury from the content of soils assessments or from any negative reviews, field checks or audits conducted by the department and any and all soils professionals used by the department under OAR 660-033-0030(5) and (9). I hold these entities harmless and release them from liability for any injury or damage that may occur in conjunction with the submitted soils assessment.

In exchange for the department's review of this submittal under the soils assessment program, I expressly agree to forever waive and give up all claims, suits, actions, proceedings, losses, damages, liabilities, awards and costs of every kind and description, including any and all federal and state claims, reasonable attorney's fees, and expenses at trial (collectively "claims") which I have or may have a right to bring against any agency, department, the state, or their agents, officials or employees arising out of or related to my participation and performance in the soil assessment program, including but not limited to claims for mistake or negligence of the department, the state of Oregon, and their officers, employees and agents. I further agree that the provisions of this Liability Waiver and Release from Federal and State Claims shall be effective and binding upon my heirs, executors, administrators, successors, assigns, beneficiaries, or delegates and shall inure to the benefit of the department, the State of Oregon, and their officers, employees and agents.

David Wilson

Wilson- Order 1 Soil Survey Report

RE: OAR 660-033-0030

1). General Information

- a). Order 1 Soil Survey Report—Wilson Property, Oregon
- b). David Wilson
- c). Gary A. Kitzrow, M.S., CPSC/CPSS # 1741, Master of Science
- d). None
- e). Wasco
- f). RE: T2N R12E Sec. 23C TL# 4400
- g). EFU
- h). Zone change
- i). 40.13 Ac./40.13 acres
- j). complete a site-specific soil survey for the above parcel to determine if a preponderance of the property is comprised of generally unsuited soils. The goal is to secure a Plan Amendment Zone Change.

2). Enclosed

- a). Scale of enclosed USDA-NRCS Soil maps: 1:3170;—USDA Soil Legend: 49C Wamic 29.8 Acs.; 50D Wamic 10.5 Acs.; 51D Wamic-Skyline Complex 0.5 Acs.
- a). We completed a total of 23 descriptions for the 40.13-acre study site.
- b). December 18-19, 2020
- c). A Backhoe was used to excavate the study area Field texturing was completed; Munsell color chart was used for soil colors; standard soil pH kit was used; field assessment for structure, consistence, pores, drainage class, root distribution, effective/absolute rooting depths and related morphology testing.
- d). Enclosed is a map showing all description locations.
  - 1). 45.63857' N -121.31456' W
  - 2). 45.63825' N -121.31395' W
  - 3). 45.63832' N -121.31380' W

Pg. 2 T2N R12E Sec. 23C TL# 4400

e). There are excellent correlations of soil mapping units and vegetation for this study area. The dominant Skyline and Bodell soil units are droughty due to shallow bedrock (< 20"), loamy matrices and very high rock content in the case of the Bodell soil mapping unit (10E). Grasses and hardwood are noted on the mapping units and have not been cultivated in perpetuity. The moderately deep Wamic mapping unit is droughty but does have an argillic horizon hence increased water holding capacities and increased clay content in the Control Section. This area is generally tree-free and has been growing grasses for many years. This particular property is very complex with the vegetative and soil communities NOT aspect related.

Regarding the geomorphic surfaces and soil mapping units; the determining factor for mapping No alluvium soils are present.

(f). No limitations were encountered in completing this Soil Survey. It is noteworthy; this portion of the *Wasco County Soil Survey Area* is apparently under-represented regarding USDA Order 3 Reporting Standards and the number and diversity of Soil Mapping Units on the Wasco County USDA Soil Legend. By completing offsite reviews of surrounding properties and detailed Order 1 Soil Survey for the current subject property, Wamic soils are over-represented mapping units given the confirmed diverse and wide range of landforms and geomorphic surfaces in this specific region. Wamic soils are mapped on virtually every landform in this area. Although a pervasive soil series, there are many other soils in this region and we would not expect only one soil to be mapped in such a large geographic domain. Oregon is an extremely diverse state and unlike states such as Iowa where indeed the same soil may be found over a many square mile area, that is not the case in Oregon. This current subject property is a good example of the natural complexity expected in most Oregon areas where hills, valleys and competing landscapes are confirmed.

#### (4) Results, Findings and Decisions:

- (a) The bedrock geology for this land base is basalt mixed with areas in the southwest portion of the property exhibiting a paralithic contact with and without a duripan which all occur at less than 20". Little direct hard rock is noted in this area transitioning from definable soil. Soil development is generally a function of the presence or absence of ejected ash moving into or out from the subject study area. The basalt itself yields very immature, shallow soils when soils erode *from* the site hence the Class 7 (Bodell and Skyline). Conversely, where soil accumulates via erosion (central area and central northern areas), soils deepen up, Soil Capability Class gets better and Wamic soils become dominant. The Wamic soils are more of a function of accretion NOT soil removal but basalt is a common thread underlying all areas on this parcel. Lithic verses paralithic geologic contacts are important on this subject property. Where paralithic contacts are present (SW ¼ and some SE ¼ ) of the ownership, soils shallow-up and the bedrock becomes a more dominant portion of the land capability.
- (b) The landforms present on this study site include planar to planar concave, non-colluvial lava plains and basins with local microsites. In the bottomland area (mid northern property) some mixed alluvium and terrace remnants may be present but are truncated and ill-defined. The soils we found strongly correlate to these landforms. Rolling convex

Pg. 3 T2N R12E Sec. 23C TL# 4400

areas in the northwest 1/4 (north of the developed infrastructure areas) are classified as indistinct uplands showing suited Wamic soils throughout. Contiguous areas due south exhibit ancient infrastructure dating back to the 1980s. The eastern 1/3 of the survey area shows harder bedrock and much rock in the soil profile as a function of the more sharply overt convex slopes some of which face west and northwest. These eastern areas show landforms which are much more dissected and abbreviated as compared with area in the western 1/3. The soils reflect these contrasting landforms. Much of the eastern 1/3 of the ownership exhibits harsh-growing conditions.

- (c) No natural drainageways are confirmed within the parcel. The nearest drainageway is about 2 miles southeast and 4 miles due east.
- (d) Our Order I Soil Survey confirms Skyline, Wamic, Bodell and Infrastructure are the only soil mapping units confirmed on the subject property. Presence or absence of a paralithic geologic contact combined with landscape position principally govern the soil series and mapping units present. The subject property is complex and diverse. Shallow Bodell and Skyline soils are consistently present but are spread out throughout the ownership. Wamic soils are found where ash has eroded from surrounding low hillslopes.
- (e) Previous USDA Survey: 49C Wamic 29.8 Acs.; 50D Wamic 10.5 Acs.; 51D Wamic-Skyline Complex 0.5 Acs. GSEA: Final Order I Soil Survey Mapping units: See attached Soil Map.

(5) Summary and Conclusions:

A slim majority, (preponderance) of this proposed lot is made up of the shallow, generally unsuited Class 7 Skyline, Bodell units and Class 8 Infrastructure. (irrigated and non-irrigated). The lithic, entic Bodell soil mapping units are shallow, very rocky with restrictive rooting capabilities and low water holding capacities. Skyline soils, which are very definable and modal, on this parcel similarly has shallowness due to a somewhat indurated paralithic contact beginning at less than 20 inches consistently. Conversely, Wamic soils are somewhat deeper, have thicker and more defined topsoils with more clay build-up (hence water holding capacity

This study area and legal lot of record is comprised of 51.8% ( 20.79 Ac.) of generally unsuited soils Capability Class 7 and Class 8 by Wasco County and DLCD definitions.

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or

- Class 8 soils and miscellaneous areas have limitations that preclude commercial plant production and that restrict their use to recreational purposes, wildlife habitat, watershed, or esthetic purposes.

*Capability subclasses* are soil groups within one class. They are designated by adding a small letter, e, w, s, or c, to the class numeral, for example, 2e. The letter e shows that the main hazard is the risk of erosion unless close-growing plant cover is maintained; w shows that water in or on the soil interferes with plant growth or cultivation (in some soils the wetness can be partly corrected by artificial drainage); s shows that the soil is limited mainly because it is shallow, droughty, or stony; and c, used in only some parts of the United States, shows that the chief limitation is climate that is very cold or very dry.

In class 1 there are no subclasses because the soils of this class have few limitations. Class 5 contains only the subclasses indicated by w, s, or c because the soils in class 5 are subject to little or no erosion.

## Report—Land Capability Classification

<sup>1</sup> Permeability of the least permeable subsurface horizon.

<sup>2</sup> The irrigated column refers to surface irrigation systems. The dryland column includes non-irrigated and sprinkler systems.

<sup>3</sup> Available water between field capacity and wilting point.

<sup>4</sup> Alkali soils have exchangeable sodium in excess of 15 percent.

<sup>5</sup> Temperature and Water Balance for Oregon Weather Stations. Special Report 150, May 1963. Oregon Agric. Exp. Sta. Column figures are minimums.

<sup>6</sup> Udic soils with excessive cloud cover (precipitation in excess of 60 or 70 inches) excluding coastal terraces and coastal bottom lands are Class VI up to 60 percent slopes and Class VII above 60 percent slopes.

<sup>7</sup> Depth to fragipan may be 30 or more.

<sup>8</sup> Poorly drained when protected by dikes and pumped.

<sup>9</sup> Depth to fragipan may be 20 or more.

<sup>10</sup> Very poorly drained when protected by dikes and pumped.

<sup>11</sup> All C<sub>2</sub> methods regardless of slope.

Subclass - use w, s, and only on 0 to 3% slopes; use e above 3% slopes.

**Appendix F.**

**Official Series Descriptions for  
Skyline, Wamic and Bodell**

Established Series  
Rev. DFA/GLG/AON  
12/1999

## SKYLINE SERIES

The Skyline series consists of shallow, well-drained soils that formed in loess, ash and colluvium weathered from sedimentary bedrock. These soils are on uplands and have gently sloping to very steep slopes. The mean annual precipitation is about 17 inches and the mean annual air temperature is about 48 degrees F.

**TAXONOMIC CLASS:** Loamy, mixed, superactive, mesic, shallow Typic Haploxerolls

**TYPICAL PEDON:** Skyline very cobbly loam, rangeland. (Colors are for moist soil unless otherwise noted.)

**A1**--0 to 2 inches; very dark grayish brown (10YR 3/2) very cobbly loam, grayish brown (10YR 5/2) dry; weak fine granular structure; slightly hard, friable, slightly sticky and slightly plastic; many very fine roots; many very fine irregular pores; 20 percent fine and medium pebbles; 25 percent cobbles and 10 percent stones; neutral (pH 6.8); abrupt smooth boundary. (1 to 6 inches thick)

**A3**--2 to 9 inches; very dark grayish brown (10YR 3/2) very cobbly loam, grayish brown (10YR 5/2) dry; weak medium subangular blocky structure; slightly hard, friable, slightly sticky and slightly plastic; many very fine roots and many very fine tubular pores; 10 percent fine pebbles and 15 percent cobbles; neutral (pH 6.9); clear smooth boundary. (4 to 9 inches thick)

**B2**--9 to 14 inches; dark brown (10YR 3/3) gravelly loam, brown (10YR 5/3) dry; weak medium subangular blocky structure; hard, friable, slightly sticky and slightly plastic; common very fine roots and many very fine tubular pores; 15 percent pebbles and 10 percent cobbles; neutral (pH 6.9); abrupt wavy boundary. (5 to 7 inches thick)

**ICr**--14 to 16 inches; dark brown (10YR 4/3) semiconsolidated sandstone bedrock and very hard.

**TYPE LOCATION:** Wasco County, Oregon; about 1,000 feet north of country road in the NE1/4 NE1/4 NW1/4 section 26, T. 1 S., R. 12 E.

**RANGE IN CHARACTERISTICS:** In most years the soils are usually moist but are dry in the moisture control section for more than 90 consecutive days during the 4 months following the summer solstice. They are moist throughout the moisture control section for 90 days or more following the winter solstice. The mean annual soil temperature ranges from 47 to about 54 degrees F. Thickness of solum and depth to the paralithic contact range from 12 to 20 inches. Rock fragments (2 mm. to 10 inches in diameter) range from 20 to 55 percent in the A horizons and 10 to 30 percent in the B horizons and average 20 to 35 percent in the control section. Amount of surface stones ranges from 5 to 20 percent. The control section is loam and has 12 to 18 percent clay.

The A horizon has value of 4 or 5.5 dry, 2 or 3 moist, and chroma of 2 or 3 moist dry. It has weak or moderate structure.

**COMPETING SERIES:** These are the Balder, Kuhl, Stukel and Tollhouse series. Balder soils are fine-loamy, have 18 to 27 percent clay and overlie volcanic tuff. Kuhl and Stukel soils have lithic contacts. Tollhouse soils are coarse sandy loam or sandy loam and have 20 to 50 percent coarse sand or very coarse sand.

**GEOGRAPHIC SETTING:** The Skyline soils are on gently sloping to very steep uplands at elevations of 500 to 3,500 feet. The soils formed in mixed loess and volcanic ash and colluvium over partially weathered sedimentary bedrock. The climate is semiarid with moist winters and dry summers. The mean annual temperature is about 45 to 52 degrees F., the mean January temperature is about 32 degrees F., and the mean July temperature is about 62 degrees F. The mean annual precipitation is 14 to 20 inches. The frost-free (32 degrees F.) season is 110 to 140 days and for (28 degrees F.) is 140 to 160 days.

**GEOGRAPHICALLY ASSOCIATED SOILS:** These are the Duart, Frailey, Hesslan and Wamic soils. Duart and Hesslan soils are 20 to 40 inches deep to a paralithic contact. Frailey and Wamic soils are more than 40 inches deep to bedrock.

**DRAINAGE AND PERMEABILITY:** Well-drained; rapid to very rapid runoff; moderate permeability.

**USE AND VEGETATION:** Range. Present vegetation is mainly bunchgrass, forbs, shrubs, oak and pine trees.

**DISTRIBUTION AND EXTENT:** Uplands of north-central Oregon. The series is moderately extensive.

**MLRA SOIL SURVEY REGIONAL OFFICE (MO) RESPONSIBLE:** Portland, Oregon

**SERIES ESTABLISHED:** Wasco County, Oregon, 1975.

---

NATIONAL COOPERATIVE SOIL SURVEY  
U.S.A.

Established Series  
Rev. GLG/AON/RWL  
12/1999

## WAMIC SERIES

The Wamic series consists of deep, well-drained soils that formed in mixed loess and ash over alluvium and colluvium weathered from basalt or andesite. These soils are on uplands. Slopes are to 70 percent. The mean annual precipitation is about 18 inches and the mean annual temperature is about 48 degrees F.

**TAXONOMIC CLASS:** Fine-loamy, mixed, superactive, mesic Vitrandic Haploxerepts

**TYPICAL PEDON:** Wamic loam, cultivated. (Colors are for moist soil unless otherwise noted.)

**Ap**--0 to 7 inches; very dark grayish brown (10YR 3/2) loam, light brownish gray (10YR 6/2) dry; weak fine granular structure; slightly hard, friable, slightly sticky and slightly plastic; many very fine roots; many very fine irregular pores; neutral (pH 6.6); abrupt smooth boundary. (6 to 10 inches thick)

**Bw1**--7 to 18 inches; dark brown (10YR 3/3) loam, light brownish gray (10YR 6/2) dry; weak medium subangular blocky structure; slightly hard, friable, slightly sticky and slightly plastic; many very fine roots; many very fine tubular pores; neutral (pH 6.7); clear wavy boundary. (0 to 13 inches thick)

**Bw2**--18 to 28 inches; brown (10YR 4/3) loam, light brownish gray (10YR 6/2) dry; weak medium subangular blocky structure; hard, friable, slightly sticky and slightly plastic; common very fine roots; many very fine and common fine tubular pores; about 2 percent very fine gravel; light gray (10YR 7/2) with dry coatings of very fine sand on faces of peds; neutral (pH 6.8); abrupt wavy boundary. (8 to 15 inches thick)

**2C**--28 to 44 inches; brown (10YR 4/3) heavy loam, pale brown (10YR 6/3) dry; massive; very hard, very firm, sticky and plastic; few fine roots; many very fine and common fine tubular pores; about 2 percent very fine gravel; brown (7.5YR 4/4) when dry thick clay films in nearly all pores and on faces of fractures; neutral (pH 6.8).

**2R**--44 inches; bedrock

**TYPE LOCATION:** Wasco County, Oregon; 100 feet south of road in the northeast 1/4 northwest 1/4 northwest 1/4, sec. 26, T. 2 S., R. 12 E.

**RANGE IN CHARACTERISTICS:** The soils are usually moist but are dry for 60 to 80 consecutive days in more than 7 out of 10 years throughout the moisture control section. The mean annual soil temperature ranges from 47 to 52 degrees F. The thickness of the solum and depth to the 2C horizon ranges from 24 to 36 inches and depth to bedrock is 40 to 60 inches. The control section has 18 to 27 percent clay and more than 18 percent coarser than very fine sand. The solum has hue of 10YR or 7.5YR. The solum is estimated to have a volcanic glass content of 5 to 20 percent and acid oxalate extractable aluminum plus one-half iron of 0.4 to 1.0 percent.

The A horizon has value of 5 or 6 dry, 3 or 4 moist and chroma of 2 or 3 moist and dry. It is very fine sandy loam, loam, or silt loam. This horizon has weak granular or subangular blocky structure.

The Bw horizon has value of 5 or 6 dry and chroma of 2 to 4 moist and dry. It is loam or silt loam.

The C1 horizon, where present, is massive and has few to common very firm noncalcareous nodules 1/2 to 3/4 inch in diameter and is similar to the B horizon in texture. The 2C horizon is heavy loam, clay loam, or sandy

clay loam with 20 to 30 percent clay. It is very hard or extremely hard and firm or very firm. This horizon has brown or reddish brown, moderately thick or thick clay films mostly in pores and fractures but distributed throughout the mass in some pedons.

**COMPETING SERIES:** There are no competing series.

**GEOGRAPHIC SETTING:** The Wamic soils are on uplands and have nearly level to very steep slopes with gradients generally ranging from 0 to 20 percent but ranging to 70 percent in some areas and are at elevations of 1,000 to 3,600 feet. The soils formed in mixed volcanic ash and loess over medium or moderately fine textured alluvium or colluvium weathered from basalt or andesite. The climate is characterized by cool wet winters and hot dry summers. The mean July temperature is 63 degrees F.; the mean January temperature is 37 degrees F. The mean annual temperature is 45 to 50 degrees F. The mean annual precipitation is 14 to 25 inches.

**GEOGRAPHICALLY ASSOCIATED SOILS:** These are the Bald, Bodell, Frailey, Hesslan, and Skyline soils. These soils are dominantly on steeper slopes with south aspects. Bald soils are loamy-skeletal and are 20 to 40 inches deep to a lithic contact. Bodell soils are grassland soils, have mollic epipedons and are less than 20 inches deep to a lithic contact. Frailey soils are coarse-loamy, have more than 15 percent rock fragments in the control section and lack firm or very hard 2C horizons above depth of 40 inches. Hesslan soils have mollic epipedons, are commonly stony, and are 20 to 40 inches deep to a paralithic contact. Skyline soils have mollic epipedons and are less than 20 inches to a paralithic contact.

**DRAINAGE AND PERMEABILITY:** Well-drained; moderately slow permeability.

**USE AND VEGETATION:** Principal use is for grain production. Other uses are hay and pasture, livestock grazing, woodland and recreation. Vegetation is mainly an overstory of white oak and ponderosa pine. Shrubs are bitterbrush, deerbrush, and snowberry. Idaho fescue is the predominant grass with bluebunch wheatgrass, prairie junegrass and Sandberg bluegrass.

**DISTRIBUTION AND EXTENT:** North-central Oregon; MLRA 6. The series is moderately extensive.

**MLRA SOIL SURVEY REGIONAL OFFICE (MO) RESPONSIBLE:** Portland, Oregon

**SERIES ESTABLISHED:** Wasco County, Oregon, 1975.

**REMARKS:** This draft reflects a change in classification from fine-loamy, mixed, mesic Typic Xerochrepts based on the Andisol Order.

Diagnostic horizons and features recognized in this pedon:

Ochric epipedon - from 0 to 7 inches (Ap horizon)

Cambic horizon - from 7 to 28 inches (Bw1 and Bw2 horizons)

Particle-size control section - from 10 to 40 inches.

**ADDITIONAL DATA:** Characterization data on 2 profiles (S57-Oreg-33-8 and 33-9) reported in Riverside Soil Survey Laboratory Report for soils in Wasco, Sherman and Gilliam Counties, Oregon, May, 1959.

Established Series  
Rev. DFA/GLG/RWL  
03/98

## BODELL SERIES

The Bodell series consists of shallow, well drained soils that formed in mixed loess, ash and colluvium weathered from basalt. These soils are on mountains. Slopes are 0 to 75 percent. The mean annual precipitation is about 28 inches and mean annual temperature is about 49 degrees F.

**TAXONOMIC CLASS:** Loamy-skeletal, mixed, superactive, mesic Lithic Haploxerolls

**TYPICAL PEDON:** Bodell cobbly loam, rangeland. (Colors are for moist soil unless otherwise noted.)

**A**--0 to 5 inches; dark brown (7.5YR 3/2) cobbly loam, brown (7.5YR 4/3) dry; weak fine granular structure; slightly hard, friable, slightly sticky and slightly plastic; many very fine roots; many very fine irregular pores; 10 percent gravel and 20 percent cobbles; neutral (pH 6.6); abrupt smooth boundary. (4 to 6 inches thick)

**Bw1**--5 to 13 inches, dark brown (7.5YR 3/3) extremely cobbly loam, brown (7.5YR 4/3) dry; weak medium and fine subangular blocky structure; slightly hard, friable, slightly sticky and plastic; many very fine roots; many very fine tubular and irregular pores; 20 percent gravel and 40 percent cobbles; neutral (pH 6.6); clear smooth boundary.

**Bw2**--13 to 18 inches; dark brown (7.5YR 3/3) extremely cobbly clay loam, brown (7.5YR 4/4) dry; weak fine subangular blocky structure; hard, firm, sticky and plastic; common very fine roots; many very fine irregular and tubular pores; 60 percent cobbles and 10 percent stones; neutral (pH 6.6); abrupt smooth boundary. (combined thickness of the Bw horizon is 8 to 20 inches)

**2R**--18 inches; basalt bedrock.

**TYPE LOCATION:** Wasco County, Oregon; 100 feet north of road in the NW1/4 SW1/4 SW1/4 section 33, T.2N., R.12E.

**RANGE IN CHARACTERISTICS:** The soils are moist in some part of the soil above depth of 12 inches for at least half the time (cumulative) during the period the soil temperature is above 41 degrees F. but are dry between depths of 4 and 20 inches for 60 to 90 consecutive days during the solstice. The mean annual soil temperature ranges from 47 to 55 degrees F. Depth to basalt bedrock is 12 to 20 inches. The solum has hue of 7.5YR or 10YR. The particle-size control section has 18 to 30 percent clay and 40 to 70 percent rock fragments. The upper 4 to 6 inches is estimated to have 10 to 30 percent volcanic glass and 0.4 to 1.0 percent acid oxalate extractable aluminum plus one-half iron. The mollic epipedon is 10 to 20 inches thick. The soil is slightly acid or neutral.

The A horizon has value of 2 or 3 moist, 4 or 5 dry and chroma of 2 or 3 moist and dry. It is cobbly loam, very cobbly loam, or very stony loam. It has 10 to 30 percent gravel, 10 to 30 percent cobbles, and 0 to 35 percent stones.

The Bw horizon has value of 3 or 4 moist, 4 or 5 dry and chroma of 3 or 4 moist dry. It is loam or clay loam and has 18 to 30 percent clay. It has 10 to 60 percent gravel, 10 to 55 percent cobbles, and 0 to 15 percent stones.

**COMPETING SERIES:** These are the Aldax, Bakeoven, Couleedam, Johntom, Lickskillet, Limekiln, Plaskett, Rockly, and Venator series. Aldax soils average less than 18 percent clay and are usually dry. Bakeoven soils are 4 to 10 inches deep to bedrock and are usually dry. Couleedam soils average less than 18 percent clay and are

usually dry (aridic). Johnthom soils are 5 to 15 percent clay in the particle-size control section. Licksillet soils are dry for more than 90 consecutive days. Limekiln soils have a calcic horizon at a depth of 7 to 12 inches. Plaskett soils have a mean annual soil temperature of 55 to 58 degrees F. and average less than 18 percent clay in the particle-size control section. Rockly soils are 4 to 12 inches deep to bedrock. Venator soils are dominated by channery rock fragments throughout the solum.

**GEOGRAPHIC SETTING:** Bodell soils are on moderately steep to very steep generally south-facing side slopes of mountains. Elevations are 200 to 3600 feet. These soils formed in mixed loess, volcanic ash, and colluvium weathered from basalt over basalt bedrock. The mean annual precipitation is 14 to 40 inches. The mean annual temperature is 45 degrees to 51 degrees F., the mean winter temperature is about 31 degrees F. and the mean summer temperature is about 69 degrees F. The frost-free season is 90 to 140 days.

**ASSOCIATED SOILS:** These are the Bald, Ketchly and Wamic soils. Bald soils are on forested side slopes of mountains and are more than 20 inches deep to bedrock. Ketchly and Wamic soils are on forested side slopes of mountains and more than 40 inches deep to bedrock. Also, Ketchly soils have frigid soil temperatures.

**DRAINAGE AND PERMEABILITY:** Well drained; moderate permeability.

**USE AND VEGETATION:** These soils are used for livestock grazing and wildlife habitat. The native vegetation is mainly Idaho fescue, bluebunch wheatgrass, sandberg bluegrass, arrowleaf balsamroot and onspike oatgrass.

**DISTRIBUTION AND EXTENT:** Uplands of north-central Oregon; MLRA 6. The series is inextensive.

**MLRA SOIL SURVEY REGIONAL OFFICE (MO) RESPONSIBLE:** Portland, Oregon

**SERIES ESTABLISHED:** Wasco County, Oregon, 1975.

**REMARKS:** Diagnostic horizons and features recognized in this pedon include:

Mollic epipedon - the zone from the surface to 18 inches (A, Bw1, and Bw2 horizons)

Vitrandic feature - the zone from the surface to 5 inches (A horizon)

Particle-size control section - the zone from 10 to 18 inches (lower 3 inches of Bw1 horizon and Bw2 horizon)

RE: File No 921-18-000086-PLNG (Wilson Goal Exception Remand)

Dear Wasco County Board of Commissioners:

These comments are provided on behalf of Sheila Dooley and Jill Barker, petitioners before LUBA in this above-referenced matter when it was appealed from its prior approval. For the reasons set forth below, Wasco County cannot approve the Goal Exception/Zone Change requested by applicant David Wilson. This parcel neither qualifies for a developed exception (as recognized by Staff, as voted on by Planning Commission, and as LUBA held as a matter of law); nor does it qualify for an “irrevocable commitment” exception, as voted on (in a tie, which goes to denial) by Planning Commission.

**DEVELOPED EXCEPTION**

In the interest of keeping the comments on this portion of the application brief, I will point to LUBA’s opinion on this matter (*Dooley v. Wasco County*, LUBA No. 2019-065). LUBA was unequivocal when it held that this property does not qualify for a “developed” exception. Nothing has changed since that time, other than the applicant’s attempt to re-frame the numbers around the extent of development. The law is clear: structures allowed by Goal 4 cannot be counted toward a physically developed exception. *See* OAR 660-004-0025(2). The roads, the dwelling, and the barns are allowed under Goal 4 as incidental to farm uses. The applicant added some buffers to the existing structures on the property, in an apparent attempt to inflate the percent of the property which could be considered developed. The law does not support these buffers. Staff correctly noted these problems with the application, and the draft findings correctly lead to the conclusion that a Developed exception is inappropriate. The Planning Commission agreed, and recommended the developed exception be denied.

**IRREVOCABLY COMMITTED EXCEPTION**

Again here, LUBA’s opinion in *Dooley v. Wasco County* is instructive. The “focal criteria” when analyzing an irrevocably committed exception is the relationship between the subject property and adjacent uses. OAR 660-004-0028(2); *see also*, *DLCD v. Curry County (Pigeon Point)*, 151 Or App 7, 11, 947 P2d 1123 (1997) (holding that the “fundamental test” for

irrevocably committed exception is the relationship between the subject property and the surrounding area); *Converse*, 39 Or LUBA at 441.

OAR 660-004-0028(2) sets forth the relevant factors at play here, which are: the characteristics of the exception area; the characteristics of the adjacent lands; the relationship between the exception area and the adjacent lands; the OAR 660-004-0028(6) factors. Those OAR 660-004-0028(6) factors are more specific considerations of the parcel and its surroundings and how they interact. Since LUBA ruled on the prior application, Mr. Wilson has added very little to the Record here. The primary addition to the Record is a soil survey claiming remarkably (and, in the area, uniquely) low quality soils. This survey stands in contrast to the trees and plants which actually exist on the property.

In any case, as LUBA noted, tracts as small as just two acres qualify for deferral, and can be used for resource uses. There remains, even with this new soil survey, far more than two acres available for resource uses, along with acreage which could support resource uses on adjacent parcels. This additional information does not cure the defects which LUBA noted. I urge the Board to deny this application.

As noted above, the County must demonstrate *how* existing uses on adjacent lands render resource use on the subject property impracticable. *DLCD v. Wallowa County*, 37 Or LUBA 105, 111 (1999). Stated another way, a committed exception “must be based on facts illustrating how past development has cast a mold for future uses.” *1000 Friends of Oregon v. LCDL (Curry County)*, 301 Or 447, 501, 724 P2d 268 (1986). The mere presence of adjoining residential uses is not a sufficient basis for concluding that resource lands are irreversibly committed to non-resource uses. *Gordon v. Polk County*, 54 Or LUBA 351 (2007); *Waymire*, 39 Or LUBA at 452-53. Nor is the “occasional inconvenience” that a rural resident must be willing to accept sufficient to approve a Committed exception. *Friends of Linn County v. Linn County (Schwindt)*, 42 Or LUBA 235, 246 (2002).

While, as with the prior hearing on this matter, staff has once again chosen to rely on a dictionary definition for “impracticable,” there is no shortage of case law on which the County should rely instead for its determination. The standard for impracticability “is a demanding one.” *1000 Friends of Oregon v. Yamhill County*, 27 Or LUBA 508, 519 (1994). The test is **not** one of commercial viability. The question is whether the subject property is capable of generating a gross income. *See, 1000 Friends of Oregon v. Benton County*, 32 Or App 413, 426 (1978).

Reliance upon longstanding adjacent rural uses is insufficient to demonstrate that resource use of the proposed exception area has become impracticable in the absence of recent or imminent changes affecting the subject property. *Wodarczak v. Yamhill County*, 34 Or LUBA 453, 460-461 (1998) (citing *Jackson County Citizens League*, 38 Or LUBA at 365-366). Here, the applicant has provided no new information on this relationship between the subject parcel and the surrounding parcels, and LUBA has already held that on the information as contained in the Record, there is no irrevocable commitment of this property.

## **PLANNING COMMISSION HEARING**

Mr. Wilson provided some updated (if questionable) soil surveys to the Planning Commission, but these do not fundamentally alter the character of the property at issue, nor do these new soil surveys change the actual relationship with this property to the surrounding uses.

That is a question of history, and whether (or how) conflicts with surrounding uses preclude resource uses here. evidence of proximal rural development does not, without evidence of *actual* conflicts, lead to the conclusion that the subject property is irrevocably committed. *Prentice v. LCDC*, 71 Or App 394, 403-404, 692 P2d 642 (1984).

Additionally, at the hearing before the Planning Commission, there was some significant discussion about “profitability.” In Oregon, profitability is a term of art when applied to a Goal 4 exception analysis, and is not one of commercial viability, but instead a question of whether a *gross* income could be earned from the property. *1000 Friends of Oregon v. Yamhill County*, 27 Or LUBA 508, 517-518 (1994) (“[W]e reject the county’s suggestion that it may establish the level of profitability necessary to qualify as a ‘farm use,’ as that term is defined by ORS 215.203, may not be set at such level that would qualify a farm use as a commercial agricultural enterprise. The goals protect and allow farm and forest uses other than commercial agricultural enterprises”).

Ultimately, the Planning Commission recommended denial of the Developed exception, and via a tie vote, recommended a denial of the Irrevocable Commitment exception as well. I would urge you to follow this recommendation, and deny the same.

## SOILS

Staff’s finding here is confusing- it simultaneously describes the different (and if accurate, seemingly anomalous) soil types on this property that make it unsuitable for growing the very trees which satellite views show it growing, while recognizing the surrounding properties on three sides as “actively [in] forest use” but saying nothing of the satellite views showing ponderosa pine trees growing across all properties in the area. Staff Report at BOCC 1-83.

The question, pursuant to OAR 660-004-0028(3) is whether:

- 1) farm use as defined in ORS 215.203;
- 2) propagation or harvesting of a forest product as specified in OAR 660-033-0120; and,
- 3) forest operations or forest practices specified in OAR 660-006-0025(2)(a) are *impracticable* [as defined above].

The historic (and current) existence of ponderosa pine throughout this tract seem to foreclose the idea that propagation or harvesting of a forest product is impracticable here. One look at the “soil suitability map” provided by the applicant, and presented in the staff report at BOCC 1-94 shows that the areas designated “generally unsuitable” are overlayed over large swaths of mature ponderosa pine trees. Not only that, but the soils dubbed “suitable” are largely in mowed areas, or areas where there are sparse trees, contrary to staff’s assertion that those areas are dominated by development. This is flatly not borne out by the very image submitted by the applicant and placed before this body.

Additionally, as LUBA discussed in its opinion remanding this application, “the county’s finding that conflicts with residential uses resulting from spraying are not a basis to find that resource use of the subject property is impracticable.” LUBA No. 2019-065 at 14 (internal citation omitted).

## PROFITABILITY

The question of profitability is relevant to this exception, but only as defined in Oregon law. The County does not have the responsibility of analyzing business plans, or “profitability” in the traditional sense. The test is whether the subject property is “capable, now, or in the future, of being currently employed for agricultural production for the purpose of obtaining profit in money.” ORS 215.203; *Brown v. Jefferson County*, 33 Or LUBA 418, 433 (1996). In this context, the term “profit” “does not mean profit in the ordinary sense, but rather refers to **gross income**.” *Id* at 433-434 (emphasis added)(quoting *1000 Friends of Oregon v. Benton County*, 32 Or App 413, 426, 573 P.2d 651 (1978)). Therefore, if a *gross income* can be obtained from farm use on the subject property, then resource use is practicable, and an exception is unwarranted. *Lovinger v. Lane County*, 36 Or LUBA 1 at 17-18 (1999). The question of gross profit, coupled with the lack of conflicts with surrounding properties (discussed below), would appear to foreclose any question of this goal exception under this case law.

Farm uses can remain practicable on a property not capable of supporting a self-sufficient commercial agricultural operation, or a property where a “reasonable farmer could not make a living entirely from agricultural use of the land.” *Id* at 18-19. In the case at hand, Mr. Wilson’s property currently grows Ponderosa Pine trees, and Oregon White Oak where it is not actively mowed. The existence of trees at that density suggests not only that the soils are of a relatively high quality, as noted on the NRCS maps, but also that a gross income could be obtained from growing trees (or other crops, like feed) on this property. Likewise, the property is currently used for grass hay, which is baled on the property, according to the application. Otherwise, the draft Findings are silent regarding the potential for this property to support the adjacent resource properties currently in forestry use.

Like with farm uses, commercial viability is not the sole measure of practicability for forest uses. To justify an irrevocably committed exception on forest land, Respondent must explain in its findings why the facts upon which it relies lead to a conclusion that all uses allowed by Goal 4 are impracticable. *DLCD v. Klamath County*, 16 Or LUBA at 28. It is insufficient for respondent to address just the feasibility of a commercial forestry operation on the property, rather than potential for any forest use. *Id*. Nor is it enough to conclude that “it would take substantial effort to have a profitable forest operations,” or that resource use is “severely restricted.” *DLCD v. Josephine County*, 18 Or LUBA at 93.

The issue of the soil quality and whether it is sufficient for resource uses must be considered in conjunction with those surrounding tracts, and the portions of Mr. Wilson’s tract, which today do in fact grow ponderosa pine and white oak. This seemingly includes all areas of this subject property which are not mowed or built upon. The balance of the property, as described by the applicant, is used for grass hay and pasture and is baled each year. *See* Staff Report at p. 50, citing 2018 application. Between the capability to grow hay and ponderosa pine trees, the issue of “profit” is completely foreclosed by the applicant’s stated current and past uses of the property.

## RELATIONSHIP TO ADJACENT PARCELS

Staff notes that “a majority of the north, northwest, and east adjacent parcels contain active registered addresses, and are generally smaller in size than those located to the south, southwest, and west.” BOCC 1-83. And further notes that “the size of the subject parcel, and its

historical and current use is more in line with those neighboring north, northwest, and east parcels.” *Id.* However, this isn’t quite true, if one looks at the map immediately preceding this finding. This subject parcel is 40 acres, while the neighboring parcels used to justify this finding are all less than 15 acres. While the applicant seeks to rezone this parcel so that it may in the future be subdivided to smaller parcels more like this, the subject parcel is actually more like the larger parcels to its south and west, which are, as staff describes “in active forestry use” Staff Report at 67.

On page BOCC 1-84 of the Staff Report, a 2013 settlement agreement is cited, noting that “the BPA line has a history of being considered a logical man-made boundary for separating forestry uses from built and residential areas.” The County should proceed with caution here. When approving a committed exception, a County cannot irrevocably commit *other* resource lands to non-resource uses. *Gordon v. Polk County*, 55 Or LUBA 57 (2007). The parcel at issue here does not abut the BPA line (*See* Staff Report at 80), and as such, if the Board uses this as a justification, it would appear to be committing these other adjacent resource lands.

Further, this BPA line is little more than an optical boundary- it provides no meaningful fire break, as seen during the 2020 Mosier Creek fire. *See also*, 2014 Letter from DLCD and ODF at p. 3 (BOCC 1-647). The power line is allowed in the resource zone, so it cannot commit land itself either, because its consideration is limited under OAR 660-004-0028(6) to “utilities lines . . . that effectively impede practicable resource use of all or part of the exception area.” Mr. Wilson has not demonstrated how a power line which bisects existing forestry operations impedes use of his property, which is not bisected by this utility line.

LUBA already held in its Opinion on the first appeal of this application, that the prior findings did not “address the relationship of the subject property to the adjacent approximately 450 acres of F-2 zoned lands located to the west of the property that are in timber production and/or that possess soils suitable for forestry production, or the approximately 2,000 acres of resource land that are in forest use located immediately south of Mr. Wilson’s tract, or the potential for resources use of the property in conjunction with the adjacent F-2 zoned properties.” LUBA No. 2019-065 at \*11-12. Since LUBA made that holding, Mr. Wilson has provided no new information to address these deficiencies, and the explanation in the Staff Report does not materially differ from that in the prior Decision. With no new information in the Record on those points, the County cannot now make a finding sufficient to meet the requirements of a goal exception.

## CONCLUSION

For each of the reasons set forth in this comment, as well as all of the comments provided to Planning Commission, and those provided by my clients directly, and the facts in the whole Record, the applicant has failed to meet the requirements for either a developed, or a committed exception, and the draft findings as presented are insufficient to support a Decision granting this application. This application must be denied.

---

RE: File #921-18-000086-PLNG. Land Use Board of Appeals Remand (LUBA No. 2019-065)  
Comprehensive Plan Amendment; Exception to Statewide Planning Goal 4; and Zone Change from  
Forest, F-2 (80) to Forest-Farm F-F (10) by David Wilson

Phil Swaim  
3300 Vensel Rd.  
Mosier, Oregon

In 2014 DLCD and ODF did not believe the subject property was either Physically Developed or Irrevocably Committed and recommended that the existing zone and plan designations be retained. Their letter in opposition to an earlier rezone application that included this property is on page BC 1-647).

They also had concerns with the idea that the BPA powerline would serve as a fire break in the event of a fire. The Mosier Creek Fire of 2020 proved this as the fire raced across the powerline easement and onto adjoining forestland to the south.

Additional development would push the wildland-urban interface more deeply into forest zone to the detriment of forest management and increase cost and risk of fire, endangering the larger community.

All forest land is bordered by something which makes the argument that there is already development moot. If you are allowing development because it is next to development where does that end?

The original staff report was based on an on-site visit.

The applicant has put forth a new site plan that is drastically different from that in the LUBA Record. Commenting on this application is made difficult as the facts and numbers keep changing. There are non-existent buffer requirements including a 50-foot road setback along Seven Mile Hill Rd. although none is required as per Arthur Smith. This non-existent 50-foot buffer zone contains 60 plus pines of 2 to 40 feet in height.

In regards to the 30' wide easements for power lines, there is no such requirement for underground utilities. The only power lines of concern are those owned and maintained by Wasco Electric Coop. There are no required setbacks for buried lines but on page BOCC 1-49 there is a long list of buried lines with a 30' easement.

The applicant has claimed a total of 10,024 feet of power lines. In reality there appears to be only 450 linear feet of overhead power lines shown on the new site plan.

The applicant has included a buffer of 50' each side from structures. **The Wasco County LUDO does not prohibit trees within 50 feet of a structure.** The 50-foot wide fire fuel break maintenance standards include having trees limbed up approximately 8 feet from the ground and removing underbrush but does not prohibit trees in the buffer zone. **The LUDO encourages trees in the buffer zone to provide shade and cooling. (BOCC 1-640). (LUDO 10.120).**

The original site plan was based on a staff site visit.

None of the square footage of the structures in the original site plan in the LUBA Record (page 9) (BOCC 1-639) match the square footage listed in the Remand Request Letter (PC 1-629).

The dimensions of the log house are shown as 80 x 100 or 8,000 square feet in his letter calculations (BOCC 1-1344) but only 2,660 on the site plan. At the December 7<sup>th</sup>, 2021 Planning Commission hearing the applicant stated that the difference was due to decks surrounding the house. According to the Complete LUBA Record (pg. 1382, PC 1-1383), the house with decks totals 2,680 square feet, not 8,000.

The original staff report that went to LUBA and the new staff report contain contradictory information. For example, the site plan that went to LUBA and the new site plan contain different development and none of the square footage of the buildings match the original square footage.

There are trailer sites on the new site plan but looking at the aerial photograph not such development is visible.

I've been driving past the property under discussion for over 50 years. I have never seen any of the trailer sites that are on the new site plan map.

In the 60's and 70's the Deckers cut and baled hay and grazed livestock. The applicant claims that the soil is no good for either ag use or growing trees. However 2/3 of the 40 acre parcel is tree covered, 90% of the alleged bad soils on the south and east are tree covered. There are over 500 pine trees growing on 28 acres, many that are merchantable. The balance of the acreage, the mowed hay field, is of prime soil type that could grow about anything. Trees would naturally reseed if it was left unmowed, even with Douglas fir, as evidenced by a water course down the center of the property as shown by a willow tree growing there.

Please reject the proposed zone change.

Sincerely,

Phil Swaim

RE: File #921-18-000086-PLNG. Land Use Board of Appeals Remand (LUBA No. 2019-065)  
Comprehensive Plan Amendment; Exception to Statewide Planning Goal 4; and Zone Change from  
Forest, F-2 (80) to Forest-Farm F-F (10) by David Wilson

Sheila Dooley  
3300 Vensel Rd.  
Mosier, Oregon

Dear Wasco County Commissioners,

These comments supplement my written testimony and photographs in the BOCC packet starting on  
page BOCC 1-592. The photographs illustrate the following points.

1. Soil survey

The USDA soil survey found the soils to be more productive than average (all class 4) and suited to  
growing Ponderosa Pine and Oregon white oak. These trees as well as fir trees are growing on the areas  
not mowed and are visible in the photographs. (BOCC 1-597-604) (Also Planner Will Smith's LUBA  
Record photographs on page BOCC 3172-3177, June 21, 2018 site visit).

The stated goal of the applicant's soil survey was to show a preponderance of unsuited soils.

They claim that a slight preponderance or 51.8% is made up of generally unsuited soils Class 7 and Class  
8 infrastructure: 20.79 acres generally unsuited and 19.34 acres generally suited, a difference of 1.45  
acres. (Moving just over half that amount ( $\frac{3}{4}$  acre) to the suited side would reverse the outcome.)

In reality this is not the case as there are no class 8 soils on this property. The class 8 infrastructure label  
is based not on the soil type, which is class 4 in these areas, but on structures.

a. Infrastructure

The difference of 1.45 acres can be more than accounted for by areas of class 4 soil misclassified as class  
8 infrastructure. Although there are less than 5,000 square feet of usable structures (.11 acres), there is  
a total of over an acre and a half (1.57 acres) classified as class 8 infrastructure. The area including the  
usable structures (log house and 2 hay barns) also includes large conifer trees, oaks and cleared land  
(photographs on BOCC 1-592-593.)

The Soil Survey aerial photo (BOCC 1-1364) also shows these treed and cleared areas, which include an  
area that appears to be in a corral (photograph on BOCC 1-598 and 1-1390).

If you adjust the totals to account for this, it reverses the percentages of suited and unsuited soils and  
results in:

51.8% suited and 48.2% unsuited. 20.80 acres suited and 19.33 acres unsuited

Including the two unusable structures on the property as infrastructure (.09 acres), results in .2 acres of total infrastructure and still results in a preponderance of suited soil. The metal barn is missing its roof and the decommissioned house is missing an exterior wall and windows. Both are in too poor of condition to be used.

This results in 51.6% suited and 48.4% unsuited acres. 20.71 acres suited and 19.42 acres unsuited

None of the square footage of the buildings in the site plan that went to LUBA match those in the site plan submitted with the remand request. The LUBA site plan square footage is being used here. On June 21, 2018 Planner Will Smith conducted a site visit to verify conditions on the ground.

As an example, the dimensions of the log house are shown as 80 x 100 or 8,000 square feet in the remand letter calculations but only 2,660 on the LUBA site plan. At the December 7<sup>th</sup>, 2021 Planning Commission hearing the applicant stated that the difference was due to decks surrounding the house.

According to the Complete LUBA Record (pg. 1382, PC 1-1383), the house with decks totals 2,680 square feet, not 8,000. The applicant's new site map on page BOCC 1-1390 clearly shows that the additional decks are nonexistent.

In regards to required buffers, the Wasco County LUDO does not prohibit trees within 50' of a structure. Although requires trees to be limbed up 8 feet, trees are encouraged in this area to provide shade and cooling. (BOCC 1-640). (LUDO 10.120).

#### b. Conditions on the ground

The percentage of suited soils is actually much higher based on conditions on the ground as evidenced by the photographs.

The applicant's soil survey classified some areas of the property as class 7 soils and unsuited for growing trees. Photographs of the subject parcel contradict this as numerous Ponderosa Pine, Oregon White Oak and fir trees are present on the property in most of the areas that haven't been mowed. (BOCC 1-597-604; also LUBA record photographs on BOCC 3172-3177).

The areas not used to grow hay on this property are similar in appearance to much of the other Mosier area forest zone properties. Oak, fir and pine trees are often seen growing together throughout the Mosier area. Oak and pine trees are similar in their soil requirements according to the Wasco County Soil and Water Conservation District staff. The oak and pine habitat is a unique habitat of high value to many animal, bird and insect species.

Ponderosa Pine is a suitable tree for reforestation and is a marketable species according to ODF. ODF stated that it is used quite a bit for reforestation in the Mosier area.

#### c. Soil Survey Goal

The soil scientist was hired by the applicant to find a preponderance of unsuited soil. This was not an unbiased survey. Any decisions or assumptions he had to make most likely favored the applicant. The county doesn't have the means to determine the accuracy of the soil survey.

Another consideration is that out of 40 acres, there were a total of 23 test holes dug with the results extrapolated to apply to the areas around them. This involves a margin of error.

There is an additional margin of error to consider when inclusion areas containing different soil types within a soil type are involved. There may be many of these areas present on the property according to Wasco County Soil and Water Conservation District staff.

The soil map dimensions that the soil surveyor submitted favor the supposedly unsuited soil areas as it does not contain 90-degree angles on the south side. The map should have had right angles had it followed the property lines. It is not a direct overhead view but one taken at an oblique angle.

On the soil sheets, several areas tested were borderline as to suitability.

As an example:

Page 20 of the Soil Profile sheets shows 50D (class 4) and Wamic as the soil type, then lists “borderline??” and capability class 7/6 (6 is suitable for forestland). For vegetation, he lists conifers and hardwood trees. For suitability, both “suited” and “unsuited” are circled. (BOCC 1-1371)

The soil map has no scale shown although it should have. The map is also difficult to decipher as many of the test hole site numbers are not visible due to the presence of so many trees. Most of these are in areas that the applicant claims can’t grow trees. (BOCC 1-1361).

#### d. Soil type discrepancies

There are also discrepancies with 2 of the soil types identified in the survey and classified as class 7. These were questioned by the Wasco County Soil and Water Conservation District staff

A. The soil survey of the applicant’s property includes a soil type 51C not found in Northern Wasco County according to *Soil Survey of Wasco County, Northern Part*. This document is included in the staff report to the Planning Commission with soil types listed on PC 1-425 (December 7, 2021 Planning Commission packet). (BOCC 1-430).

B. The soil type 10E Bodell was identified in areas containing Ponderosa Pine and Oregon White Oak, trees that should not be growing on this soil type according to the Wasco County Soil and Water Conservation District (December 7, 2021 Planning Commission Packet, PC -581-582). (BOCC 1-654-655)

e. The letter to Planner Daniel Dougherty from Gary Kitzrow (PC 1-353) states that Skyline is the predominant soil. If you add up the acres of soil types in the Soil Survey Legend, Wamic is the dominant soil type. (BOCC 1-1364).

Skyline 13.16

Wamic 19.34

Bodell 6.06

Also Infrastructure 1.57 on Wamic soil

He also states that there are no proper trees to measure- which is not accurate as there are numerous large conifers, including Ponderosa pine and Douglas fir trees on the property.

## 2. Aerial Photo of Subject Property and Adjoining Area

The applicant states that his aerial photo shows a “moonscape” south of the property. His photograph submitted in the Remand Request appears to have been deliberately overexposed. Areas to the south and east include productive forest, hay and grazing land including that formerly owned by Grant Robbins. The moonscape the applicant refers to is not evident on Google maps of the surrounding area (BOCC 1-604).

The subject property has historically been used for farming, starting from at least the ‘60s if not earlier. Sam Decker farmed property on both sides of the road and had 3 cuttings of alfalfa per year in the mid-70s according to the neighbors. When the property was sold to Larry Black in the late ‘70s he purchased Mr. Decker’s farm equipment (bill of sale attached as Exhibit 1 in my testimony to the Planning Commission) and continued farming the land and also had cattle grazing there in the late ‘70s.

According to his rezone application, David Wilson continued the farm use growing grass hay that is baled each year (December 7, 2021 Planning Commission, PC 1-45). The property also contains merchantable timber (Staff finding in Complete LUBA Record page 1128, BOCC 1-3323)

The staff report to the Planning Commission on December 7<sup>th</sup> stated that “The subject parcel has been removed from farm/forest tax deferral.” (Planning Commission Agenda Packet, December 7, 2021, PC 1-90).

The fact that the applicant has chosen to not farm this parcel beyond growing grass hay, plant trees or let them come back naturally, or reinstate the farm/ forest tax deferral, does not make it less valuable as farm or forest land. Choosing to do this was most likely done to support the claim that the property should be rezoned.

The subject property is part of a 109-acre tract owned by the applicant. Adjoining the 40- acre subject property to the south is a 69-acre parcel owned by the applicant that is in farm deferral. As stated in my written testimony, in 2018 the applicant stated that he needed a 7,000 square foot agricultural exempt building to support his agricultural/farm use. In January 2018 the Wasco County Planning Commission approved his request for retroactive approval of the illegally placed building on appeal (PLAAPL-17-10-001 Wilson Appeal).

At the January 2, 2018 hearing Mr. Sumerfield stated that “Applicant makes substantial income from farm production each year the property has been in deferral.” (Planning Commission meeting minutes of January 2, 2018, page 20). The applicant stated that he planned to farm an additional 20 acres (page 4) and was waiting to plant more alfalfa (page 5). He was plowing additional land adjacent to his 6 acres of barley/oats and planning to expand the farm use and increase the number of cattle grazed (page 16). (January 2<sup>nd</sup> Planning Commission meeting minutes on BOCC 1-616-637).

The Planning Commission found that “the applicant has met the need for the size of the building in conjunction with the existing and future farm use as described in the farm plan.” (January 23, 2018 meeting minutes, page 3). (January 23<sup>rd</sup> Planning Commission meeting minutes on BOCC 1-612-615).

Location & Zone Map on BOCC 1-33: There is no house to the west of the property and the applicant's house is on the adjoining parcel to the south. Both properties are zoned F-2. To the north across the road there is a tree farm. The house on the property to the east is on the other side of that property and located south of the subject property. There is no potential conflict with forestry use.

As the entire record, including the new evidence does not demonstrate that the property is either physically developed to such an extent that it is no longer available for resource use or irrevocably committed to non-resource uses, the rezone request should be denied.

Sincerely,

Sheila Dooley

Planning Department

Wasco County Board of Commissioners  
Public Remand Hearing  
March 16, 2022

Applicant/Owner: Dave Wilson  
(921-18-000086-PLNG)

# Agenda

- Overview of the Request and Area Involved
- History & Scope of Remand Hearing
- Applicable Rules
  - OAR 660-004-0025
  - OAR 660-004-0028
- Questions

# Overview of the Request & Area

## Request

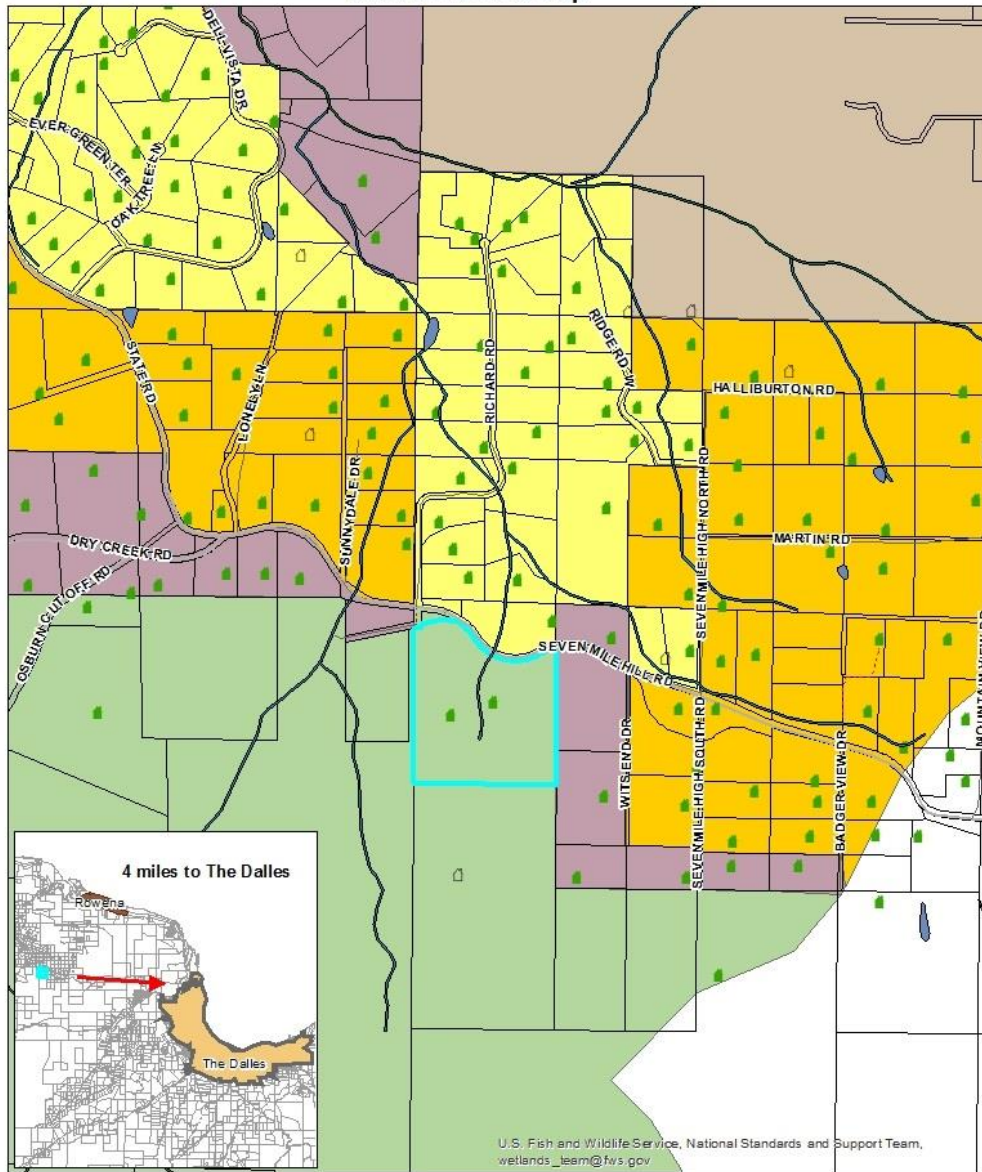

1. Comprehensive Plan Map Amendment: Change a legal parcel designated “Forestry” to “Forest Farm”;
2. Exception to Statewide Planning Goal 4 – Forest Lands; and
3. Zone Change: Change a legal parcel zoned Forest (F-2) Zone to Forest-Farm (F-F 10) Zone (Non-Resource) (remove from resource zone protections)

## Scope of Remand Hearing

- Staff findings and the Planning Commission’s recommendations made were limited to OAR 660-004-0025 and OAR 660-004-0028.

## *OAR 660-004-0025*

### *Exception Requirements for Land Physically Developed to Other Uses*

- (1) A local government may adopt an exception to a goal when the land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal. Other rules may also apply, as described in OAR 660-004-0000(1)*
- (2) Whether land has been physically developed with uses not allowed by an applicable goal will depend on the situation at the site of the exception. The exact nature and extent of the areas found to be physically developed shall be clearly set forth in the justification for the exception.*

# *OAR 660-004-0025*

## *OAR 660-004-0025*

### *Exception Requirements for Land Physically Developed to Other Uses*

- (1) Applicant must demonstrate that because the parcel is so physically developed, resource use is precluded.
  
- (2) Situation at the Site of Exception
  - Specific area(s) must be shown on a map or described and keyed to findings;
  - Identify the extent and location of the existing physical development;
    - Structures, roads, sewer and water facilities, and utility facilities
  - Roads cannot be used to justify physically developed exception

# OAR 660-004-0025

## Applicant Site Map

### Applicant Estimates

- Power Lines / 15' from center line
- Structures / 50' (fire fuel break)
- Seven Mile Hill Road / 50' buffer
- Driveway Easement / 50' buffer

Total = 571,187 ft<sup>2</sup>

### Total

32.81% of total area

(See Attachment D Exhibit 4)

# OAR 660-004-0025

## Staff Information & Estimates

- *Chapter 10 Fire Safety Standards*
  - *Section 10.120 - Defensible Space – Clearing and Maintaining a Fire Fuel Break*
    - *50 foot fire fuel break around structures*
  - *Section 10.140 - Access Standards - Providing safe access to and escape from your home*
    - *A fire fuel break extending 10 feet either side of the center line of the driveway is required*
- Public Road Maintenance Area (4-6' on each side of county road)
- Power Line Maintenance Easement Area (15' from centerline)

## Staff Estimates

- Actual Development = 14,620 SF
  - Structural Fire Break = 113,500 SF
  - Access Drive Fire Break = 67,740 SF
  - Power Line Easement = 112,800 SF
  - Public Road Maintenance = 6,690 SF
- Total = 315,350 SF

## Total

18% Physically Developed

# OAR 660-004-0025

## Staff Findings & Planning Commission Recommendation

- *Sandgren v. Clackamas County*, facts must demonstrate the property is physically developed to such an extent that all resource uses are precluded.
- *Dooley et al v. Wasco County*, impracticability of Goal 4 uses caused by existing physical development is not the standard for a physically developed exception request.

**PLANNING COMMISSION RECOMMENDATION:** Pertaining to OAR 660-004-0025, the Planning Commission concluded that the parcel does not meet the required standards of OAR 660-004-0025, and recommended that the Wasco County Board of Commissioners deny the request based on the physically developed exception.

# *OAR 660-004-0028(2)(c)*

## *OAR 660-004-0028*

### *Exception Requirements for Land Irrevocably Committed to Other Uses*

*(2) Whether land is irrevocably committed depends on the relationship between the exception area and the lands adjacent to it. The findings for a committed exception therefore must address the following:*

*(c) The relationship between the exception area and the lands adjacent to it;*

#### Relationship Analysis

- **Soils**
- **General Land Use History, Zoning, and Use**

# OAR 660-004-0028(2)(c)

## Relationship Analysis

- “Wilson – Order 1 Soil Survey” and 1982 USDA Order 3 Soil Survey differ
- The subject parcel’s existing “residential use” and development is more in line with residentially zoned properties to the north, northwest, and east
- The subject parcel’s resource designation & zoning does not fall in line with the land use designation and zoning pattern of the area
- The parcel’s development combined with generally unsuitable soils diminish relationship with active forest uses to the south, southwest, & west

# OAR 660-004-0028(3)

## OAR 660-004-0028(3)

### *Exception Requirements for Land Irrevocably Committed to Other Uses*

- (3) *“Whether uses or activities allowed by an applicable goal are impracticable as that term is used in ORS 197.732(2)(b), in goal 2, Part II(b), and in this rule shall be determined through consideration of factors set forth in this rule. Compliance with this rule shall constitute compliance with the requirements of Goal 2, Part II. It is the purpose of this rule to permit irrevocably committed exceptions where justified so as to provide flexibility in the application of broad resource protection goals. It shall not be required that local governments demonstrate that every use allowed by the applicable goal is ‘impossible.’ For exceptions to Goals 3 or 4, local governments are required to demonstrate that only the following uses or activities are impracticable;*
- (a) Farm use as defined in ORS 215.203;*
  - (b) Propagation or harvesting of a forest product as specified in OAR 660-033-0120;*
  - (c) Forest operations or forest practices as specified in OAR 660-006-0025(2)(a).”*

# *OAR 660-004-0028(3)*

Resource use is impracticable due to combined reasons:

- Diminished overall soil capacity
- Mapping of “generally unsuitable soils” as compared to adjacent lands
- Questions concerning soil mapping accuracy of adjacent lands
- Existing development and non-farm/forest residential use
- Surrounding residential uses (north, northwest, and east)
- Not in line with land designation & zoning map
- Risk of potential conflict of uses

# OAR 660-004-0028(6)

## OAR 660-004-0028(6)

*(6) Findings of fact for a committed exception shall address the following factors:*

*(c) Parcel size and ownership patterns of the exception area and adjacent lands:*

*(A) Consideration of parcel size and ownership patterns under subsection (6)(c) of this rule shall include an analysis of how the existing development pattern came about and whether findings against the Goals were made at the time of partitioning or subdivision. Past land divisions made without application of the Goals do not in themselves demonstrate irrevocable commitment of the exception area. Only if development (e.g., physical improvements such as roads and underground facilities on the resulting parcels) or other factors make unsuitable their resource use or the resource use of nearby lands can the parcels be considered to be irrevocably committed. Resource and nonresource parcels created pursuant to the applicable goals shall not be used to justify a committed exception. For example, the presence of several parcels created for nonfarm dwellings or an intensive agricultural operation under the provisions of an exclusive farm use zone cannot be used to justify a committed exception for land adjoining those parcels.”*

# OAR 660-004-0028(6)

## OAR 660-004-0028(6)

*(6) Findings of fact for a committed exception shall address the following factors:*

*(c) Parcel size and ownership patterns of the exception area and adjacent lands:*

*(B) Existing parcel sizes and contiguous ownerships shall be considered together in relation to the land's actual use. For example, several contiguous undeveloped parcels (including parcels separated only by a road or highway) under one ownership shall be considered as one farm or forest operation. The mere fact that small parcels exist does not in itself constitute irrevocable commitment. Small parcels in separate ownerships are more likely to be irrevocably committed if the parcels are developed, clustered in a large group or clustered around a road designed to serve these parcels. Small parcels in separate ownership are not likely to be irrevocably committed if they stand alone amidst larger farm or forest operations, or are buffered from such operations.*

# OAR 660-004-0028

## Staff Findings & Planning Commission Recommendation

- 1000 Friends of Oregon v. Yamhill County, the impracticable standard is a demanding one.
- OAR 660-006-0028(1) and DLCD v. Curry County (Pigeon Point), The focal point of analysis of an “irrevocably committed” exception is the relationship between the “exception area” and adjacent lands.
- **PLANNING COMMISSION RECCOMENDATION:** Pertaining to OAR 660-004-0028, the Planning Commission voted a tie (3-3) vote. The Wasco County Planning Commission Bylaws Section I Subsection P, provides that “In cases of a tie vote, the decision shall be deemed a denial of the motion before the Commission.” Accordingly, the Planning Commission recommends that the Wasco County Board of Commissioners deny the request based on the irrevocably committed exception.

# Questions?
